 XX
 XX Novel single or multiple target oligonucleotide anti-sense to e.g. CCR1,
 XX initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
 XX RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 XX asthma.
 XX
 XX Claim 2; SEQ ID NO 1113; 174pp; English.
 XX
 XX The invention relates to oligonucleotides anti-sense to an initiation
 XX codon, coding region, 5' or 3' intron-exon junction, intron or region
 XX with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 XX chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 XX -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 XX tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 XX also relates to a method of screening a candidate compound that binds to
 XX one or more nucleic acid target(s) or expressed product(s), for the
 XX prevention and/or treatment of a respiratory or lung disease. The
 XX oligonucleotides are useful for reducing or inhibiting expression of a
 XX gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 XX CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 XX tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 XX useful for preventing or treating a respiratory or lung disease. The
 XX respiratory or lung disease is associated with hyper-responsiveness to
 XX and/or increased levels of, adenosine and/or levels of adenosine A
 XX receptor(s), and/or asthma and/or lung allergies associated with
 XX inflammation or an inflammatory disease. The respiratory or lung disease
 XX is chosen from airway inflammation, allergy, asthma, impeded respiration,
 XX cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 XX allergic rhinitis, acute respiratory distress syndrome, pulmonary
 XX hypertension, lung inflammation, bronchitis, airway obstruction or
 XX bronchoconstriction. This sequence represents an oligonucleotide of the
 XX invention.

 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC trypsinase a, trypsinase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC trypsinase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hyperextension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

 XX PT Novel single or multiple target oligonucleotide anti-sense to e.g.
 PT initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
 PT RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 PT asthma.
 XX PS Claim 2; SEQ ID NO 1235; 174pp; English.
 XX CC The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

Nyce JW, Sandrasagra A, Tang L, Aguilar D, Miller S; Shahabuddin S, Lu H, Cong H; WPI; 2004-293804/27.

Novel single or multiple target oligonucleotide anti-sense to e.g. CCR1, initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g. asthma.

Claim 2; SEQ ID NO 1094; 174pp; English.

The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention also relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the prevention and/or treatment of a respiratory or lung disease. The oligonucleotides are useful for reducing or inhibiting expression of a gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The respiratory or lung disease is associated with hyper-responsiveness to and/or increased levels of, adenosine and/or levels of adenosine A receptor(s), and/or asthma and/or lung allergies associated with inflammation or an inflammatory disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD), allergic rhinitis, acute respiratory distress syndrome, pulmonary hypertension, lung inflammation, bronchitis, airway obstruction or bronchoconstriction. This sequence represents an oligonucleotide of the invention.

 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

XX Claim 2; SEQ ID NO 1191; 174pp; English.

XX The invention relates to oligonucleotides anti-sense to an initiation

CC codon, coding region, 5' or 3' intron-exon junction, intron or region

CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target

CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)

CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,

CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention

CC also relates to a method of screening a candidate compound that binds to

CC one or more nucleic acid target(s) or expressed product(s), for the

CC prevention and/or treatment of a respiratory or lung disease. The

CC oligonucleotides are useful for reducing or inhibiting expression of a

CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,

CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,

CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are

CC useful for preventing or treating a respiratory or lung disease. The

CC respiratory or lung disease is associated with hyper-responsiveness to

CC and/or increased levels of, adenosine and/or levels of adenosine A

CC receptor(s), and/or asthma and/or lung allergies associated with

CC inflammation or an inflammatory disease. The respiratory or lung disease

CC is chosen from an inflammatory disease, allergy, asthma, impeded respiration,

CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),

CC allergic rhinitis, acute respiratory distress syndrome, pulmonary

CC hypertension, lung inflammation, bronchitis, airway obstruction or

CC bronchoconstriction. This sequence represents an oligonucleotide of the

CC invention.

 XX Novel single or multiple target oligonucleotide anti-sense to e.g.
 PT initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
 PT RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 PT asthma.
 XX Claim 2; SEQ ID NO 1197; 174pp; English.
 XX The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

 PS Claim 2; SEQ ID NO 1091; 174pp; English.
 XX
 CC The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

CC codon, coding region, 5' or 3' intron-exon junction, intron or region
CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
CC also relates to a method of screening a candidate compound that binds to
CC one or more nucleic acid target(s) or expressed product(s), for the
CC prevention and/or treatment of a respiratory or lung disease. The
CC oligonucleotides are useful for reducing or inhibiting expression of a
CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
CC useful for preventing or treating a respiratory or lung disease. The
CC respiratory or lung disease is associated with hyper-responsiveness to
CC and/or increased levels of, adenosine and/or levels of adenosine A
CC receptor(s), and/or asthma and/or lung allergies associated with
CC inflammation or an inflammatory disease. The respiratory or lung disease
CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
CC hypertension, lung inflammation, bronchitis, airway obstruction or
CC bronchoconstriction. This sequence represents an oligonucleotide of the
CC invention.

 Novel single or multiple target oligonucleotide anti-sense to e.g.
 initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
 RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 asthma.
 Claim 2; SEQ ID NO 1283; 174pp; English.
 The invention relates to oligonucleotides anti-sense to an initiation
 codon, coding region, 5' or 3' intron-exon junction, intron or region
 with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 also relates to a method of screening a candidate compound that binds to
 one or more nucleic acid target(s) or expressed product(s), for the
 prevention and/or treatment of a respiratory or lung disease. The
 oligonucleotides are useful for reducing or inhibiting expression of a
 gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 useful for preventing or treating a respiratory or lung disease. The
 respiratory or lung disease is associated with hyper-responsiveness to
 and/or increased levels of, adenosine and/or levels of adenosine A
 receptor(s), and/or asthma and/or lung allergies associated with
 inflammation or an inflammatory disease. The respiratory or lung disease
 is chosen from airway inflammation, allergy, asthma, impeded respiration,

CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

PT asthma.
XX
PS Claim 2; SEQ ID NO 1136; 174bp; English.
XX
XX The invention relates to oligonucleotides anti-sense to an initiation
CC codon, coding region, 5' or 3' intron-exon junction, intron or region
CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
CC also relates to a method of screening a candidate compound that binds to
CC one or more nucleic acid target(s) or expressed product(s), for the
CC prevention and/or treatment of a respiratory or lung disease. The
CC oligonucleotides are useful for reducing or inhibiting expression of a
CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
CC useful for preventing or treating a respiratory or lung disease. The

 DR Novel single or multiple target oligonucleotide anti-sense to e.g.
 XX initiation codon, intron of respiratory disease-relevant gene e.g. CCRI,
 PT RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 PT asthma.
 XX Claim 2; SEQ ID NO 1232; 174pp; English.
 PS The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCRI, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC triptase a, triptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCRI, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, triptase a,
 CC triptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

PT Isolating fully thioated, single stranded antisense oligonucleotides from
PT a biological solution, useful in drug discovery, comprises contacting the
PT solution with an immobilized metal ion adsorption chromatography resin.

PS Example 1; Page 15; 28pp; English.

XX The invention relates to a method of isolating fully thioated single

CC stranded antisense oligonucleotides from a biological solution. The

CC method comprises contacting the biological solution with an immobilised

CC metal ion adsorption chromatography (IMAC) resin to adsorb antisense

CC oligonucleotides to the resin; and contacting the resin with an eluent

CC under conditions that provide desorption of the antisense

CC oligonucleotides from the resin, where the fully thioated antisense

CC oligonucleotides are separated from incorrectly thioated antisense

CC oligonucleotides in the solution. The invention also relates to antisense

CC oligonucleotides isolated using the method of the invention, and a kit

CC for purification of fully thioated single stranded antisense

CC oligonucleotides according to the method of the invention. The metal ion

CC used in the method is preferably Fe³⁺ or Zr²⁺, which are able to interact

CC with a backbone phosphorothioate group of a nucleic acid. The method

CC permits antisense oligonucleotides to be isolated from incorrectly

CC synthesised and/or non-fully thioated oligonucleotides to provide a

CC substantially pure preparation of the desired fully-thioate

CC oligonucleotides. The oligonucleotides isolated using the method may be

CC used therapeutically or other applications (e.g., drug discovery).

CC Compared to prior art methods, the method of the invention has improved

CC selectivity, reduces the need for organic solvents and/or high pressures,

CC and is easier to scale up and is hence more cost-effective. The present

CC sequence represents an antisense oligonucleotide used in the examples to

CC demonstrate the method of the invention. Three different forms of the

CC oligonucleotide were used: a fully phosphorothioated version, an

CC unmodified phosphodiester version, and a predominantly phosphorothioate

CC version in which two bonds (positions 10 and 15) are phosphodiester.

Identifying a subject at risk of breast cancer by detecting the presence

PT of polymorphic variations in the ICAM, MAPK10, KIAA0861, NUMA1 or GALE

PT regions which are associated with breast cancer in a nucleic acid sample

PT from a subject.

XX

XX Example 4; Page 83; 289pp; English.

XX The invention relates to a novel method for identifying a subject at risk

CC of breast cancer comprising detecting the presence or absence of one or

CC more polymorphic variations associated with breast cancer in a nucleic

CC acid sample from a subject. The method of the invention has cytostatic

CC applications and may be useful for identifying a subject at risk of

CC breast cancer, for early diagnosis, prevention and treatment of breast

CC cancer, possibly via gene therapy, as well as to analyse and predict a
 CC response to a breast cancer treatment and in clinical drug trials. The
 CC current sequence is that of an Extend primer (also described as probe) of
 CC the invention which was used to genotype human intercellular adhesion
 CC molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor; BB2
 CC CD54; cell surface glycoprotein P3.58) has been mapped to chromosomal
 CC position 19p13.3-p13.2, ICAM-4 (Landsteiner-Wiener blood group; LW) has
 CC been mapped to chromosomal position 19p13.2-cen and ICAM-5
 CC (telencephalin) has been mapped to chromosomal position 19p13.2.

 XX PT New oligomeric compound conjugated to an arylpropionic acid optionally
 PT interacting with a plasma protein useful for increasing the concentration
 PT of an oligonucleotide in serum.
 XX PS Example 28; SEQ ID NO 4; 42pp; English.
 XX CC The invention describes an oligomeric compound conjugated to an
 CC arylpropionic acid that optionally interacts with a plasma protein. The
 CC arylpropionic acid is ibuprofen, suprofen, fenbufen, ketoprofen, (S)-(-)-
 CC pranoprofen, or carprofen (preferably ibuprofen). Also described is a
 CC method for increasing the concentration of an oligonucleotide in serum or
 CC promoting cellular uptake of an oligonucleotide in a cell involving:
 CC selecting an arylpropionic acid that is known to bind to a plasma protein
 CC or cell surface integrin; conjugating the arylpropionic acid to the
 CC oligonucleotide to form a conjugated oligonucleotide; and adding the
 CC conjugated oligonucleotide to the serum or exposing the cell to the
 CC conjugated oligonucleotide. The compound is also useful in diagnostic
 CC applications as well as therapeutic applications and for the treatment of
 CC latent Epstein-Barr virus (EBV) infection. The ligand-conjugated
 CC oligomeric compounds increase the concentration of an oligonucleotide in
 CC serum; increase the capacity of serum for an oligonucleotide; increase
 CC the binding of an oligonucleotide to a portion of the vascular system;
 CC promote cellular uptake of an oligonucleotide in cells; bind to protein
 CC molecules and possess enhanced pharmacokinetic properties. The ligand
 CC conjugated oligomeric compounds are capable of interacting with a protein
 CC or are conjugated to drug moieties. The oligomeric compounds can be
 CC prepared having covalently attached ligands that bind reversibly to at
 CC least one serum, vascular or cellular proteins. This reversible binding
 CC is expected to decrease urinary excretion, increase serum half life and
 CC greatly increase the distribution of oligomeric compounds thus
 CC conjugated. The compounds enhance the efficiency of oligonucleotide
 CC inhibition of gene expression. This sequence represents an
 CC oligonucleotide used in the creation of ligand conjugated oligomeric
 CC compounds of the invention.

 XX PT Modulating the level or activity of a chemokine for preparing a
 PT composition for treating inflammatory disorder by modulating in an
 PT endothelial cell the level or activity of the NF-HEV polypeptide.
 XX PS Example 16; SEQ ID NO 28; 164pp; English.
 XX CC This invention relates to a novel method of modulating the level or
 CC activity of a chemokine which comprises modulating in an endothelial cell
 CC the level or activity of the NF-HEV polypeptide. The invention may be
 CC useful for the production of compounds with an antiinflammatory activity
 CC whilst the disclosed sequences may be used for gene therapy. The method
 CC is useful in modulating the level or activity of a chemokine for
 CC preparing a composition for treating inflammatory disorder. The present
 CC sequence is that of an RT-PCR primer which was used for amplification of
 CC a region of the human ICAM-1 gene in the exemplification of the
 CC invention.

 Identifying a multifunctional oligomeric compound to modulate expression
 of RNA comprises identifying an inhibiting antisense strand and
 inhibiting double-stranded oligomeric compound as multifunctional
 oligomeric compounds.
 Example 1; SEQ ID NO 27; 55pp; English.
 The invention describes a method of identifying a multifunctional
 oligomeric compound to modulate expression of RNA. The method comprises:
 contacting a target RNA with one or more double-stranded oligomeric
 compounds hybridisable to one or more target regions of the RNA and
 identifying double-stranded oligomeric compounds which inhibit target RNA
 levels by at least 50%; contacting the target RNA with an antisense
 strand of the modulating double-stranded oligomeric compound and
 determining whether the antisense strand inhibits target RNA levels by at
 least 50%; and identifying the inhibiting antisense strand and the

CC inhibiting double-stranded oligomeric compound as multifunctional
 CC oligomeric compounds. Also described are: a multifunctional oligomeric
 CC compound identified as above; a method for optimising target region
 CC selection for modulation of RNA expression; a method of modulating RNA
 CC expression; methods of optimising modulation of RNA; a method of
 CC selecting a target region of a gene; a method of selecting an optimised
 CC single-stranded oligomeric compound; a method of selecting a single-
 CC double-stranded oligomeric compound; a method of selecting a double-
 CC stranded oligomeric compound; a method of selecting a double-stranded
 CC oligomeric compound; a method of identifying one or more optimised double
 CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
 CC in length, targeted to a target RNA, where the oligomeric compound
 CC specifically hybridises the target RNA and the oligomeric compound
 CC inhibits RNA levels by at least 50% in both single-stranded and double-
 CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length

XX Identifying a multifunctional oligomeric compound to modulate expression
PT of RNA comprises identifying an inhibiting antisense strand and
PT inhibiting double-stranded oligomeric compound as multifunctional
PT oligomeric compounds.
XX
XX Example 1; SEQ ID NO 23; 55pp; English.
XX
XX The invention describes a method of identifying a multifunctional
CC oligomeric compound to modulate expression of RNA. The method comprises:
CC contacting a target RNA with one or more double-stranded oligomeric
CC compounds hybridisable to one or more target regions of the RNA and
CC identifying double-stranded oligomeric compounds which inhibit target RNA
CC levels by at least 50%; contacting the target RNA with an antisense
CC strand of the modulating double-stranded oligomeric compound and
CC determining whether the antisense strand inhibits target RNA levels by at
CC least 50%; and identifying the inhibiting antisense strand and the
CC inhibiting double-stranded oligomeric compound as multifunctional
CC oligomeric compounds. Also described are: a multifunctional oligomeric
CC compound identified as above; a method for optimising target region
CC selection for modulation of RNA expression; a method of modulating RNA
CC expression; methods of optimising modulation of RNA; a method of
CC selecting a target region of a gene; a method of selecting an optimised
CC single-stranded oligomeric compound; a method of selecting a single-
CC double-stranded oligomeric compound; a method of selecting a double-stranded
CC oligomeric compound; a method of identifying one or more optimised double-
CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases

CC in length, targeted to a target RNA, where the oligomeric compound
 CC specifically hybridises the target RNA and the oligomeric compound
 CC inhibits RNA levels by at least 50% in both single-stranded and double-
 CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
 CC targeted to a target RNA, where the oligomeric compound has a least 80%
 CC sequence homology to the complement of the target RNA and where the
 CC oligomeric compound inhibits RNA levels by at least 60% in both single-
 CC stranded and double-stranded forms. The method is useful for identifying
 CC a multifunctional oligomeric compound to modulate expression of RNA. This
 CC sequence represents a CD54 RNase H dependent oligonucleotide that can be
 CC used to modulate RNA expression.

CC compounds hybridisable to one or more target regions of the RNA and
CC identifying double-stranded oligomeric compounds which inhibit target RNA
CC levels by at least 50%; contacting the target RNA with an antisense
CC strand of the modulating double-stranded oligomeric compound and
CC determining whether the antisense strand inhibits target RNA levels by at
CC least 50%; and identifying the inhibiting antisense strand and the
CC inhibiting double-stranded oligomeric compound as multifunctional
CC oligomeric compounds. Also described are: a multifunctional oligomeric
CC compound identified as above; a method for optimising target region
CC selection for modulation of RNA expression; a method of modulating RNA
CC expression; methods of optimising modulation of RNA; a method of
CC selecting a target region of a gene; a method of selecting an optimised
CC single-stranded oligomeric compound; a method of selecting a single-
CC stranded oligomeric compound; a method of selecting a double-stranded
CC oligomeric compound; a method of identifying one or more optimised double
CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
CC in length, targeted to a target RNA, where the oligomeric compound
CC specifically hybridises the target RNA and the oligomeric compound
CC inhibits RNA levels by at least 50% in both single-stranded and double-
CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
CC targeted to a target RNA, where the oligomeric compound has a least 80%
CC sequence homology to the complement of the target RNA and where the
CC oligomeric compound inhibits RNA levels by at least 60% in both single-
CC stranded and double-stranded forms. The method is useful for identifying
CC a multifunctional oligomeric compound to modulate expression of RNA. This
CC sequence represents a CD54 RNase H dependent oligonucleotide that can be
CC used to modulate RNA expression.

CC identifying double-stranded oligomeric compounds which inhibit target RNA
 CC levels by at least 50%; contacting the target RNA with an antisense
 CC strand of the modulating double-stranded oligomeric compound and
 CC determining whether the antisense strand inhibits target RNA levels by at
 CC least 50%; and identifying the inhibiting antisense strand and the
 CC inhibiting double-stranded oligomeric compound as multifunctional
 CC oligomeric compounds. Also described are: a multifunctional oligomeric
 CC compound identified as above; a method for optimising target region
 CC selection for modulation of RNA expression; a method of modulating RNA
 CC expression; methods of optimising modulation of RNA; a method of
 CC selecting a target region of a gene; a method of selecting an optimised
 CC single-stranded oligomeric compound; a method of selecting an optimised
 CC double-stranded oligomeric compound; a method of selecting a single-
 CC stranded oligomeric compound; a method of selecting a double-stranded
 CC oligomeric compound; a method of identifying one or more optimised double
 CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
 CC in length, targeted to a target RNA, where the oligomeric compound
 CC specifically hybridises the target RNA and the oligomeric compound
 CC inhibits RNA levels by at least 50% in both single-stranded and double-
 CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
 CC targeted to a target RNA, where the oligomeric compound has a least 80%
 CC sequence homology to the complement of the target RNA and where the
 CC oligomeric compound inhibits RNA levels by at least 60% in both single-
 CC stranded and double-stranded forms. The method is useful for identifying
 CC a multifunctional oligomeric compound to modulate expression of RNA. This
 CC sequence represents a CD54 RNase H dependent oligonucleotide that can be
 CC used to modulate RNA expression.

XX Identifying a multifunctional oligomeric compound to modulate expression
 of RNA comprises identifying an inhibiting antisense strand and
 PT inhibiting double-stranded oligomeric compound as multifunctional
 PT oligomeric compounds.

XX Example 1; SEQ ID NO 17; 55pp; English.

XX The invention describes a method of identifying a multifunctional
 CC oligomeric compound to modulate expression of RNA. The method comprises:
 CC contacting a target RNA with one or more double-stranded oligomeric
 CC compounds hybridisable to one or more target regions of the RNA and
 CC identifying double-stranded oligomeric compounds which inhibit target RNA
 CC levels by at least 50%; contacting the target RNA with an antisense
 CC strand of the modulating double-stranded oligomeric compound and
 CC determining whether the antisense strand inhibits target RNA levels by at
 CC least 50%; and identifying the inhibiting antisense strand and the
 CC inhibiting double-stranded oligomeric compound as multifunctional
 CC oligomeric compounds. Also described are: a multifunctional oligomeric
 CC compound identified as above; a method for optimising target region
 CC selection for modulation of RNA expression; a method of modulating RNA
 CC expression; methods of optimising modulation of RNA; a method of
 CC selecting a target region of a gene; a method of selecting an optimised
 CC single-stranded oligomeric compound; a method of selecting an optimised
 CC double-stranded oligomeric compound; a method of selecting a single-
 CC stranded oligomeric compound; a method of selecting a double-stranded
 CC oligomeric compound; a method of identifying one or more optimised double
 CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
 CC in length, targeted to a target RNA, where the oligomeric compound
 CC specifically hybridises the target RNA and the oligomeric compound
 CC inhibits RNA levels by at least 50% in both single-stranded and double-
 CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
 CC targeted to a target RNA, where the oligomeric compound has a least 80%
 CC sequence homology to the complement of the target RNA and where the
 CC oligomeric compound inhibits RNA levels by at least 60% in both single-
 CC stranded and double-stranded forms. The method is useful for identifying
 CC a multifunctional oligomeric compound to modulate expression of RNA. This
 CC sequence represents a CD54 RNase H dependent oligonucleotide that can be
 CC used to modulate RNA expression.

 Identifying a multifunctional oligomeric compound to modulate expression
 of RNA comprises identifying an inhibiting antisense strand and
 inhibiting double-stranded oligomeric compound as multifunctional
 oligomeric compounds.
 Example 1; SEQ ID NO 28; 55pp; English.
 The invention describes a method of identifying a multifunctional
 oligomeric compound to modulate expression of RNA. The method comprises:
 contacting a target RNA with one or more double-stranded oligomeric
 compounds hybridisable to one or more target regions of the RNA and
 identifying double-stranded oligomeric compounds which inhibit target RNA
 levels by at least 50%; contacting the target RNA with an antisense
 strand of the modulating double-stranded oligomeric compound and

CC determining whether the antisense strand inhibits target RNA levels by at
 CC least 50%; and identifying the inhibiting antisense strand and the
 CC inhibiting double-stranded oligomeric compound as multifunctional
 CC oligomeric compounds. Also described are: a multifunctional oligomeric
 CC compound identified as above; a method for optimising target region
 CC selection for modulation of RNA expression; a method of modulating RNA
 CC expression; methods of optimising modulation of RNA; a method of
 CC selecting a target region of a gene; a method of selecting an optimised
 CC single-stranded oligomeric compound; a method of selecting an optimised
 CC double-stranded oligomeric compound; a method of selecting a single-
 CC stranded oligomeric compound; a method of selecting a double-stranded
 CC oligomeric compound; a method of identifying one or more optimised double
 CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
 CC in length, targeted to a target RNA, where the oligomeric compound
 CC specifically hybridises the target RNA and the oligomeric compound
 CC inhibits RNA levels by at least 50% in both single-stranded and double-
 CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
 CC targeted to a target RNA, where the oligomeric compound has a least 80%
 CC sequence homology to the complement of the target RNA and where the
 CC oligomeric compound inhibits RNA levels by at least 60% in both single-
 CC stranded and double-stranded forms. The method is useful for identifying
 CC a multifunctional oligomeric compound to modulate expression of RNA. This
 CC sequence represents a CD54 RNase H dependent oligonucleotide that can be
 CC used to modulate RNA expression.

XX Identifying a multifunctional oligomeric compound to modulate expression
XX of RNA comprises identifying an inhibiting antisense strand and
XX inhibiting double-stranded oligomeric compound as multifunctional
XX oligomeric compounds.
XX
XX Example 1; SEQ ID NO 4; 55pp; English.
XX
XX The invention describes a method of identifying a multifunctional
XX oligomeric compound to modulate expression of RNA. The method comprises:
XX contacting a target RNA with one or more double-stranded oligomeric
XX compounds hybridisable to one or more target regions of the RNA and
XX identifying double-stranded oligomeric compounds which inhibit target RNA
XX levels by at least 50%; contacting the target RNA with an antisense
XX strand of the modulating double-stranded oligomeric compound and
XX determining whether the antisense strand inhibits target RNA levels by at
XX least 50%; and identifying the inhibiting antisense strand and the
XX inhibiting double-stranded oligomeric compound as multifunctional
XX oligomeric compounds. Also described are: a multifunctional oligomeric
XX compound identified as above; a method for optimising target region
XX selection for modulation of RNA expression; a method of modulating RNA
XX expression; methods of optimising modulation of RNA; a method of
XX selecting a target region of a gene; a method of selecting an optimised
XX single-stranded oligomeric compound; a method of selecting an optimised
XX double-stranded oligomeric compound; a method of selecting a single-
XX stranded oligomeric compound; a method of selecting a double-stranded
XX oligomeric compound; a method of identifying one or more optimised double
XX -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
XX in length, targeted to a target RNA, where the oligomeric compound
XX specifically hybridises the target RNA and the oligomeric compound
XX inhibits RNA levels by at least 50% in both single-stranded and double-
XX stranded forms; and an oligomeric compound, 8-80 nucleobases in length
XX targeted to a target RNA, where the oligomeric compound has a least 80%
XX sequence homology to the complement of the target RNA and where the
XX oligomeric compound inhibits RNA levels by at least 60% in both single-
XX stranded and double-stranded forms. The method is useful for identifying
XX a multifunctional oligomeric compound to modulate expression of RNA. This
XX sequence represents a CD54 RNase H dependent oligonucleotide that can be
XX used to modulate RNA expression.

XX Identifying a multifunctional oligomeric compound to modulate expression
 PT of RNA comprises identifying an inhibiting antisense strand and
 PT inhibiting double-stranded oligomeric compound as multifunctional
 PT oligomeric compounds.

XX Example 1; SEQ ID NO 25; 55pp; English.

XX The invention describes a method of identifying a multifunctional
 CC oligomeric compound to modulate expression of RNA. The method comprises:
 CC contacting a target RNA with one or more double-stranded oligomeric
 CC compounds hybridisable to one or more target regions of the RNA and
 CC identifying double-stranded oligomeric compounds which inhibit target RNA
 CC levels by at least 50%; contacting the target RNA with an antisense
 CC strand of the modulating double-stranded oligomeric compound and
 CC determining whether the antisense strand inhibits target RNA levels by at
 CC least 50%; and identifying the inhibiting antisense strand and the
 CC inhibiting double-stranded oligomeric compound as multifunctional
 CC oligomeric compounds. Also described are: a multifunctional oligomeric
 CC compound identified as above; a method for optimising target region
 CC selection for modulation of RNA expression; a method of modulating RNA
 CC expression; methods of optimising modulation of RNA; a method of
 CC selecting a target region of a gene; a method of selecting an optimised
 CC single-stranded oligomeric compound; a method of selecting an optimised
 CC double-stranded oligomeric compound; a method of selecting a single-
 CC stranded oligomeric compound; a method of selecting a double-stranded
 CC oligomeric compound; a method of identifying one or more optimised double
 CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
 CC in length, targeted to a target RNA, where the oligomeric compound
 CC specifically hybridises the target RNA and the oligomeric compound
 CC inhibits RNA levels by at least 50% in both single-stranded and double-
 CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
 CC targeted to a target RNA, where the oligomeric compound has a least 80%
 CC sequence homology to the complement of the target RNA and where the
 CC oligomeric compound inhibits RNA levels by at least 60% in both single-
 CC stranded and double-stranded forms. The method is useful for identifying
 CC a multifunctional oligomeric compound to modulate expression of RNA. This
 CC sequence represents a CD54 RNase H dependent oligonucleotide that can be
 CC used to modulate RNA expression.

Identifying a multifunctional oligomeric compound to modulate expression

of RNA comprises identifying an inhibiting antisense strand and

inhibiting double-stranded oligomeric compound as multifunctional

oligomeric compounds.

Example 1; SEQ ID NO 2; 55pp; English.

The invention describes a method of identifying a multifunctional

oligomeric compound to modulate expression of RNA. The method comprises:

contacting a target RNA with one or more double-stranded oligomeric

compounds hybridisable to one or more target regions of the RNA and

identifying double-stranded oligomeric compounds which inhibit target RNA

levels by at least 50%; contacting the target RNA with an antisense

strand of the modulating double-stranded oligomeric compound and

determining whether the antisense strand inhibits target RNA levels by at

least 50%; and identifying the inhibiting antisense strand and the

inhibiting double-stranded oligomeric compound as multifunctional

oligomeric compounds. Also described are: a multifunctional oligomeric

compound identified as above; a method for optimising target region

selection for modulation of RNA expression; a method of modulating RNA

expression; methods of optimising modulation of RNA; a method of

selecting a target region of a gene; a method of selecting an optimised

single-stranded oligomeric compound; a method of selecting an optimised

double-stranded oligomeric compound; a method of selecting a single-

stranded oligomeric compound; a method of selecting a double-stranded

oligomeric compound; a method of identifying one or more optimised double

-stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases

in length, targeted to a target RNA, where the oligomeric compound

specifically hybridises the target RNA and the oligomeric compound

inhibits RNA levels by at least 50% in both single-stranded and double-

stranded forms; and an oligomeric compound, 8-80 nucleobases in length

targeted to a target RNA, where the oligomeric compound has a least 80%

sequence homology to the complement of the target RNA and where the

oligomeric compound inhibits RNA levels by at least 60% in both single-

stranded and double-stranded forms. The method is useful for identifying

a multifunctional oligomeric compound to modulate expression of RNA. This

sequence represents a CD54 RNase H dependent oligonucleotide that can be

used to modulate RNA expression.

DR

XX Treating inflammatory disorders, such as diabetes, rheumatoid arthritis
PT and multiple sclerosis, using antisense oligonucleotides targeted to
PT nucleic acids encoding human tumor necrosis factor-alpha (TNF-alpha).
XX
XX Example 5; SEQ ID NO 49; 145pp; English.
XX
XX The invention relates to treating an inflammatory disorder in an
CC individual comprising administering an oligonucleotide (an antisense
CC oligonucleotide) up to 30 nucleotides in length complementary to a
CC nucleic acid molecule encoding human tumor necrosis factor-alpha (TNF-
CC alpha). The oligonucleotide useful in treating an inflammatory disorder
CC inhibits the expression of the human tumor necrosis factor-alpha, and
CC comprises at least an 8 nucleobase portion of any of 50 20-21 base pair
CC sequences, given in the specification. The antisense oligonucleotide is
CC administered orally, topically or parenterally. The oligonucleotide
CC comprises at least one modified intersugar linkage. The intersugar
CC linkage is a phosphorothioate linkage. The oligonucleotide further
CC comprises at least one 2'-O-methoxyethyl modification and at least one 5-
CC methyl cytidine, where every 2'-O-methoxyethyl modified cytidine residue
CC is a 5-methyl cytidine, and where every cytidine residue is a 5-methyl
CC cytidine. The modified intersugar linkage is a methylene(methylimino)
CC intersugar linkage. The methods and compositions of the present invention
CC are useful for the diagnosis, prevention and/or treatment of diseases or
CC conditions associated with aberrant expression or activity of the TNF-
CC alpha, such as inflammatory, infectious and autoimmune diseases,
CC including diabetes, rheumatoid arthritis, Crohn's disease, pancreatitis,
CC multiple sclerosis, atopic dermatitis, inflammatory bowel disease,
CC colitis and hepatitis. The present sequence is an antisense
CC oligonucleotide targeting the human TNFalpha gene.

CC comprises at least one 2'-O-methoxyethyl modification and at least one 5-
CC methyl cytidine, where every 2'-O-methoxyethyl modified cytidine residue
CC is a 5-methyl cytidine, and where every cytidine residue is a 5-methyl
CC cytidine. The modified intersugar linkage is a methylene(methylimino)
CC intersugar linkage. The methods and compositions of the present invention
CC are useful for the diagnosis, prevention and/or treatment of diseases or
CC conditions associated with aberrant expression or activity of the TNF-
CC alpha, such as inflammatory, infectious and autoimmune diseases,
CC including diabetes, rheumatoid arthritis, Crohn's disease, pancreatitis,
CC multiple sclerosis, atopic dermatitis, inflammatory bowel disease,
CC colitis and hepatitis. The present sequence is a control antisense
CC oligonucleotide used in the exemplification of the invention.

XX PT Method of detecting ataxia telangiectasia - comprises use of primers
 based on intron-exon boundaries, useful for diagnosing disease in
 heterozygotes.

XX PS Claim 6; Page 6; 47pp; English.

XX CC The primers AAV27964-V28086 are used to amplify ataxia telangiectasia
 (ATM) exons and their adjacent splice junction sites. These can be used
 as a method of detecting a mutation in the ATM gene by comparing the PCR
 products of amplification from a sample from a patient suspected of
 having an ATM mutation with a sample from a non-mutated ATM patient. This
 method is especially useful for diagnosing ataxia telangiectasia in
 heterozygotes and can be used to locate the positions of the mutation.
 The diagnosis of ataxia telangiectasia in patients needing therapeutic
 radiation will prevent fatal radiation burns and the development of
 breast cancer which can occur

XX PT Modulating the expression of a nucleic acid in the hepatic system, useful
 for treating hepatic disorders, comprises administering to the mammal an
 oligonucleotide that hybridizes to the nucleic acid to modulate its
 expression.

XX PS Example 7; SEQ ID NO 17; 98pp; English.

XX CC This invention relates to a novel method of modulating the expression of
 a nucleic acid in the hepatic system of a mammal which comprises
 administering to the mammal an oligonucleotide that hybridizes to the
 nucleic acid to modulate the expression of the nucleic acid, where the
 oligonucleotide has two sterol groups that are covalently bonded. The
 invention may be useful for the development of a compound with
 hepatotropic activity whilst the genetic sequences of the invention may
 prove useful for gene therapy. The methods are useful for treating
 hepatic disease or disorder associated with a protein encoded by a gene.
 Note: These oligonucleotides may have one or more of several
 modifications which are detailed in the specification, including having a
 phosphorothioate backbone or having ribonucleoside bases.

 XX New peptide nucleic acid oligomers hybridising to adhesion molecule genes
 PT - are stable anti-sense cpds. of high affinity, partic. for treating
 PT inflammation, viral infection, cancer etc.
 XX Claim 2; Page 35; 57pp; English.
 PS

XX New oligomers are claimed which (A) have at least one peptide nucleic
 CC acid (PNA) subunit and (B) have a sequence hybridisable to AUG region,
 CC coding region, 5'-untranslated region or 3'-untranslated region of ICAM-1
 CC or ELAM-1, or hybridisable to AUG region, coding region, 5'- untranslated
 CC region, exon/intron junction region or 3'-untranslated region of VCAM-1.
 CC The PNAs can be used to target RNA and single stranded DNA (ssDNA) to
 CC produce antisense-type gene regulation moieties. Hence they may be used
 CC therapeutically for modulating cellular adhesion and thus as
 CC antimetastatic agents, anticancer agents, antirhinoviral agents, anti-
 CC AIDS agents and antiinflammatory agents. They may also be useful as
 CC diagnostics, e.g. as probes for specific mRNAs. PNA oligomers have high
 CC affinity for complementary single stranded DNA. They are also able to
 CC form triple helices in which a first PNA strand binds with RNA or ssDNA
 CC and a second PNA strand binds with the resulting double helix or with the
 CC first PNA strand. The PNAs possess no significant charge and are water
 CC soluble, which facilitates cellular uptake. Further, since they contain
 CC amides of non-biological amino acids, they are biostable and resistant to
 CC enzymatic degradation by proteases. The present sequence targets human
 CC intercellular adhesion molecule-1 (ICAM-1) 5' CAP region

XX Oligo:nucleotide targetted to a nucleic acid sequence encoding ICAM-1,
PT ELAM-1 or VCAM-1 - useful for treating or preventing allo:graft
PT rejection.
XX
XX Example 5; Page 53; 92pp; English.
XX
XX AAT30211-T30233, AAT33058-T33112 and AAT36667-T36684 represent antisense
CC oligonucleotides of the invention. These sequences target regions of the
CC coding sequences for human intercellular adhesion molecule-1 (ICAM-1),
CC endothelial leukocyte adhesion molecule-1 (ELAM-1, also known as E-
CC selectin), or vascular cell adhesion molecule-1 (VCAM-1). This sequence
CC targets the 5' CAP region (nucleotides 32-51) of ICAM-1. ICAM-1, ELAM-1,
CC and VCAM-1 represent three of the five cell adhesion molecules involved
CC in the adherence of white blood cells to vascular endothelium. These
CC sequences can be used in a composition for treating allograft rejection.
CC The composition contains one of these sequences in combination with an
CC immunosuppressive agent. The immunosuppressive agent used in the
CC compositions is brequinar, rapamycin, anti-lymphocyte serum, a monoclonal
CC antibody against LFA-1 or an antisense oligonucleotide. The compositions
CC can be used for treating or preventing allograft rejection, such as
CC cardiac or renal allograft rejection. By using these compositions,
CC allograft survival times are extended, and donor-specific transplant
CC tolerance is induced

XX
XX New antisense oligonucleotides, used for treating e.g. inflammatory

PT conditions, psoriasis, graft rejection, cancers, infections,
PT cardiovascular disorders or autoimmune disorders.
XX
XX Example 10; Page 179; 199pp; English.
XX
XX This sequence is an antisense oligonucleotide of the invention. The
CC antisense oligonucleotides are targeted to a nucleic acid encoding a
CC cellular adhesion molecule (CAM) and is capable of modulating the
CC expression of the CAM. They particularly inhibit intercellular adhesion
CC molecule-1 (ICAM-1), vascular cell adhesion molecule-1 (VCAM-1), or
CC endothelial leukocyte adhesion molecule-1 (ELAM-1). The antisense
CC oligonucleotides can be used to modulate CAM activity in mediating
CC cell-cell interactions and subsequent cellular and biological responses,
CC e.g. T cell activation, leukocyte transmigration and inflammation. The
CC antisense sequences can be used for modulating the synthesis of a CAM.
CC They can be used for treating an animal suspected of having or being
CC prone to a disease or condition associated with a CAM. Oligonucleotides
CC targeted to ICAM-1 can be used for treating an inflammatory disease or
CC condition e.g. inflammatory bowel disease such as Crohn's disease,
CC colitis or ulcerative colitis, a condition of the skin, e.g. psoriasis or
CC cytotoxic dermatitis, rheumatoid arthritis, allograft rejection, cancer,
CC pneumonia, multiple sclerosis or a viral infection. The ICAM-1 sequences
CC can also be used for reducing corticosteroid use in a patient or for
CC reducing cyclosporine use in a patient. The oligonucleotides can also be
CC used for detection and diagnosis. They can also be used for treating e.g.
CC hyperproliferative disorders, tumours, diapedesis, graft versus host
CC disease, arthritis, infections, autoimmune disorders, e.g. autoimmune
CC thyroid disorders, autoimmune forms of arthritis, multiple sclerosis,
CC some forms of juvenile diabetes mellitus, myasthenia gravis, pemphigus
CC vulgaris, systemic lupus erythematosus, cardiovascular disorders,
CC myocardial ischaemia/reperfusion injury, dilated cardiomyopathy, acute
CC myocarditis, ischaemic heart disease or stroke

XX
XX New antisense oligonucleotide, useful for diagnosing, as research
XX reagents and for treating disease states, which respond to modulation of
XX the synthesis or metabolism of cell adhesion molecules.
XX
XX Example 5; SEQ ID NO 27; 72pp; English.
XX
XX The invention relates to an antisense oligonucleotide targeting human
XX intercellular adhesion molecule (ICAM-1) having a sequence appearing as
XX ADM46473. In the oligonucleotide, at least one adenosine nucleotide is
XX replaced with a thymidine, cytidine or guanosine nucleotide, at least one
XX thymidine nucleotide is replaced with an adenosine, cytidine or guanosine
XX nucleotide, at least one guanosine nucleotide is replaced with an
XX adenosine, thymidine or cytidine nucleotide or at least one cytidine
XX nucleotide is replaced with an adenosine, cytidine or guanosine
XX nucleotide. The oligonucleotide is one of 88 disclosed antisense
XX oligonucleotides targeting ICAM-1, vascular cell adhesion molecule (VCAM-
XX 1) or endothelial leukocyte adhesion molecule (ELAM-1). Also included are
XX an RNA compound 8-80 nucleobases in length targeted to human ICAM-1 mRNA
XX (where the compound specifically hybridises with the human ICAM-1 mRNA
XX and inhibits the expression of human ICAM-1 mRNA), and a double stranded
XX RNA compound having the RNA equivalent sequence of ADM46473. The
XX oligonucleotide is useful for modulating the activity of the RNA and DNA
XX and the modulation of the synthesis and metabolism of specific cell
XX adhesion molecules. It is also useful for the diagnosis, as research
XX reagents and for treating disease states, which respond to modulation of
XX the synthesis or metabolism of cell adhesion molecules. The
XX oligonucleotide is suitable for treating inflammatory ophthalmological
XX disorders including redness and inflammation caused by allergens and
XX allergic reactions. The oligonucleotides can also be used to preserve
XX corneal explants ex vivo and to prevent corneal allograft rejections. The
XX specific hybridisation exhibited by the oligonucleotides may be used for
XX assays, purifications or cellular product preparations. The present
XX sequence is an antisense oligonucleotide targeting ICAM-1.

XX Universal array of oligonucleotides tags attached to a solid substrate
PT along with locus-specific tagged oligonucleotides useful in genotyping
PT using single base extension reactions.
XX
PS Example 7; Page 59; 70pp; English.
XX
CC The present invention relates to an oligonucleotide array comprising
CC oligonucleotide tags fixed to a solid substrate. The oligonucleotide
CC array is useful for genotyping a nucleic acid sample at one or more loci
CC via single base extension (SBE) reactions. A pair of primers is used to
CC amplify a polymorphic locus in a sample e.g. a single nucleotide
CC polymorphism (SNP). The present sequence is one such polymorphic locus
CC used in the present invention. The amplified nucleic acid product is then
CC used as a template in a SBE reaction with an extension primer. The SBE
CC reaction products are used to form the oligonucleotide array. Note: This
CC sequence includes a SNP represented by the degenerate codon in the
CC sequence

PS Table 7; Page 286; 517pp; English.
XX
CC The sequence is that of a bovine microsatellite sequence obtd. by
CC screening a library of bovine MboI DNA fragments of between 250 and 500
CC bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
CC clones cross-hybridised. Assuming independent distribution of
CC microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
CC in the bovine genome is estimated at >100, 000. The sequence information
CC for ca. 230 such bovine microsatellites is summarised in the
CC specification and indexed herein (see below). The sequences upstream and
CC downstream of the microsatellite sequence were used to generate the
CC required PCR primers for in vitro amplification of the corresp.
CC microsatellite (using the program OPTIPRIM). The microsatellites may be
CC used to identify individuals, for parentage testing, and in the genetic
CC mapping of economic trait loci, or genes involved the determination of
CC economically important traits esp. in cattle, to allow selective
CC breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN
CC field.)

PT Composition comprising synthetic oligonucleotides which comprise multiple
PT repeats of dinucleotides such as GT, TG useful for treating cancer by
PT inducing cell cycle arrest, inhibiting proliferation, activating
PT caspases.
XX
PS Example 4; Page 17; 77pp; English.
XX
CC The present sequence is that of a synthetic oligonucleotide useful to the
CC invention. The invention relates to a composition, comprising a 2 to 20
CC base 3'-OH, 5'-OH synthetic oligonucleotide which comprises multiple
CC repeats of dinucleotides such as GT, TG, etc., according to specific
CC formula and having cytostatic activity. The oligonucleotide compositions
CC are useful for inducing cell cycle arrest, inhibition of proliferation,
CC activation of caspases and induction of apoptosis or production of
CC cytokines such as interleukin (IL)-1-beta, IL-6, IL-10, IL-12 and tumour
CC necrosis factor (TNF)-alpha by immune system cells, in an animal having
CC cancer such as primary carcinoma, secondary carcinoma, primary sarcoma
CC and secondary sarcoma such as, leukemia, lymphoma, breast, prostate,
CC colorectal, ovarian or bone cancer. The compositions induce apoptosis
CC independent of Fas, p53/p21, p21/waf-1/CIP, pl5(ink4B), pl6(ink4), drug
CC resistance, caspase 3, transforming growth factor (TGF)-beta 1 receptor
CC and hormone dependence

 XX Non-nucleotide probe for suppressing binding of detectable nucleic acid
 PT probes to undesired sequences, has aggregate nucleobase sequence
 PT homologous to randomly distributed repeat sequence of genomic nucleic
 PT acid.
 XX Claim 10; SEQ ID NO 25; 103pp; English.

The present sequence represents a non-nucleotide probe. The probe is
 CC useful for suppressing the binding of one or more detectable nucleic acid
 CC probes, that are greater than 100 base pairs and that have been derived
 CC from genomic nucleic acid, to one or more undesired sequences in an assay
 CC for determining target genomic nucleic acid of a sample. The method
 CC comprises contacting the sample with the mixture of probes (preferably
 CC comprising 5-50 probes), contacting the sample with the one or more
 CC detectable nucleic acid probes, and determining the target genomic
 CC nucleic acid of the sample by determining the hybridization of the one
 CC more detectable nucleic acid probes to the target genomic nucleic acid of
 CC the sample. The genomic nucleic acid is contained in a fixed tissue or a
 CC cell, and the sample is metaphase spreads, interphase nucleic or nucleic
 CC found in paraffin embedded tissue material or frozen tissue sections. The
 CC probe is also useful in comparing a sample of genomic nucleic acid with
 CC that of a control sample using a genomic nucleic acid reference array.
 CC The method comprises treating a sample of genomic nucleic acid and
 CC control genomic nucleic acid, which are differentially labelled, the
 CC array or both the sample and control genomic nucleic acid and the array
 CC with the mixture of the probe under suitable hybridization conditions,
 CC contacting the array with treated mixture of sample and control genomic
 CC nucleic acid under suitable hybridization conditions, and comparing the
 CC intensities of the signals from the differential labels of the array to
 CC that caused by hybridization of the probes to genomic nucleic acid, thus
 CC determining one or more variations in copy numbers of sequences in the
 CC sample as compared with the relative copy numbers of substantially
 CC identical sequences in the control. The hybridization of the genomic

array is determined using an intercalating dye or a detectable antibody,
 CC or its fragment, that is specific for a nucleic acid/nucleic acid hybrid.
 CC The sample of genomic nucleic acid to be tested and the reference of
 CC nucleic acid are labelled with detectable moiety such that hybridization
 CC of the genomic array is determined by determining the presence, absence,
 CC amount or location of the detectable label on the one or more genomic
 CC arrays. The genomic array comprises nucleic acid that is prepared from
 CC Bacterial Artificial Chromosome (BAC) clones. The present sequence
 CC represents a non-nucleotide probe of the invention.

 XX New NOVX polypeptides useful for treating cancers, blood disorders,
 PT asthma, psoriasis, vascular disorders, hypertension, viral, bacterial or

PT parasitic infections, allergy, renal disorders and skin disorders.
 XX
 PS Example 3; SEQ ID NO 261; 415pp; English.

XX
 CC This invention relates to novel nucleic acid molecules encoding NOVX
 CC polypeptides selected from NOV1 to NOV11 inclusive, as well as variants
 CC thereof. Specifically, it refers to vectors, host cells, antibodies,
 CC agonists, antagonists and recombinant methods for producing proteins,
 CC including GPCRs, secretory proteins and dual specificity phosphatases.
 CC The present invention describes these proteins as useful for the
 CC development of compositions that can be used to treat neurodegenerative
 CC diseases such as Alzheimer's and Huntington's, inflammatory conditions
 CC including Crohn's disease and rheumatoid arthritis, as well as
 CC immunological, endocrine, pigmentation, haematopoietic, psychotic,
 CC autoimmune and muscular disorders. Accordingly, it refers to various
 CC conditions including osteoporosis, angina pectoris, hypotension, anxiety,
 CC alopecia, bulimia, cancer and manic depression. As such, they exhibit
 CC various activities including vulnery, virucide, antibacterial,
 CC analgesic, neuroprotective, nootropic, cerebroprotective, anticonvulsant,
 CC dermatological, osteopathic, antiarthritic, antiinflammatory, cytostatic,
 CC hypotensive, cardiant, hypertensive, antiulcer, antiallergic,
 CC antianigmal, immunosuppressive and antidepressant. This oligonucleotide
 CC is a 5' TET/ 3' TAMRA labelled DNA probe used to detect human NOVX DNA in
 CC an exemplification of the invention.

 DR Novel simple sequence repeats in clover species useful for selection of
 PT genes in legume breeding, for profiling legume species varieties and for
 PT testing the purity of legume seed batches.
 XX Claim 6; Page 35; 52pp; English.
 PS The present invention relates to Simple Sequence Repeats (SSRs) from
 CC clover species. SSRs, also called microsatellites, are based on a 1-7
 CC nucleotide core element which is tandemly repeated. The SSR array is
 CC embedded in complex flanking DNA. SSRs are ideal markers for genome
 CC mapping, trait mapping and marker-assisted selection. The SSRs may be
 CC used in methods for selecting genes in clover/ legume breeding. The SSRs
 CC are also useful for DNA profiling of clover varieties and for testing the
 CC purity of legume seed batches. The present sequence is a SSR motif, which
 CC was used in the present invention

XX Typing genes that contain polymorphic microsatellite loci, useful for
PT identifying predisposition to disease, by amplification and determining
PT length of amplicons.

XX Claim 9; Page 50; 64pp; German.

XX The invention describes a method of typing (M1) a gene (I) that has one
CC or more polymorphic microsatellite loci (PML). The method comprises: PCR
CC amplification of at least one DNA region of (I) that includes PML, using
CC as template a DNA sample containing at least one segment of (I); and
CC determining the length of the resulting amplicon(s). Also described are:
CC a method of determining (M2) microsatellite markers (MM) for
CC predisposition to a disease, associated with a gene that includes one or
CC more PML; and prediagnosis (M3) of diseases associated with gene that
CC include PML. The method is used to identify microsatellite markers, in a
CC disease-related gene, that are associated with a predisposition to
CC diseases and for prediagnosis of such diseases, especially prion diseases
CC but also cystic fibrosis, malignant hyperthermia syndrome in pigs and
CC metabolic diseases; also to type genes that encode milk proteins,
CC hormones or transcription factors. The method is simpler, quicker and
CC particularly less expensive than known methods based on sequencing. This
CC sequence represents a prion protein polymorphic microsatellite marker
CC consensus sequence.

PT	New genotyping oligonucleotide, useful for detecting the presence,
PT	absence or identity of single polynucleotide polymorphism in a nucleic
PT	acid sample.
XX	
PS	Claim 1; Page 59; 83pp; English.
XX	
CC	Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
CC	primer extension (SNPE) primers, and the sequences of regions flanking
CC	sites of single nucleotide polymorphisms SNPs. The present invention
CC	includes kits for determining the presence or absence of a SNP, using the
CC	oligonucleotides of the invention. The PCR primers are used to amplify a
CC	SNP flanking sequence, the SNPE primer is used as a genotyping primer.
CC	The oligonucleotides are useful for genotyping a nucleic acid sample by
CC	performing a single-nucleotide primer extension reaction. The
CC	oligonucleotides are useful for determining the presence, absence or
CC	identity of a SNP and for genotyping nucleic acid samples, for e.g. to
CC	assess by association analysis the genotype of an individual or group of
CC	individuals, having a pathological phenotypic trait suspected of being
CC	caused by one or more SNPs. Phenotypic traits include diseases e.g.
CC	agammaglobulinemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
CC	dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
CC	osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
CC	traits also include symptoms of or susceptibility to multifactorial
CC	disease of which a component is or may be genetic such as autoimmune
CC	diseases, including, rheumatoid arthritis, multiple sclerosis,
CC	inflammation, cancer, nervous system diseases and infection by pathogenic
CC	microorganism. The method is also useful in forensic investigations and
CC	paternity analysis. The present sequence represents a PCR primer specific
CC	for a human SNP containing DNA sequence

XX New anti-sense oligonucleotide analogues - with modified non-terminal pyrimidine nucleotide units, useful for treating viral infections, cancer, etc.

XX Claim 1; Page 32; 36pp; German.

XX The antisense oligonucleotide (ON) shown is a derivative of an equivalent wild type Human ICAM ON, in which at least one, esp. 2-10, non-terminal pyrimidine nucleotide(s) is/are modified. The modification may be: (a) replacement of a phosphodiester linkage by a phosphorothioate (PS), - dithioate, -aramidate; borano-, alkyl-, aralkyl-phosphate; 2,2,2-trichloro-1,1dimethyl-, alkyl- or aryl- phosphate linkage; or (3'-thio)formacetal, methylhydroxylamine, oxime, methylenedimethylidrazo, dimethylene sulphone or silyl linkage; (b) replacement of a sugar phosphate backbone by a 'morpholinonucleoside' oligomer; (c) replacement

CC of beta-D-2-deoxyribose by another sugar or carbocyclic, open-chain or
 CC bicyclic sugar analogue; or (c) replacement of the natural nucleoside
 CC base by an analogue, e.g. 5-hydroxymethyl-uridine. The 5' and/or 3'
 CC terminus may also be modified with a lipophilic gp., eg. a farnesyl. The
 CC modifications increase nuclease resistance and thus improve stability and
 CC activity

 XX Conjugates for inhibiting mRNA activity by altering 5' cap structure -
 PT comprising targetting oligo:nucleotide linked to amine or metal complex.
 PT
 XX Example 8; Col 17; 19pp; English.
 PS
 XX A novel composition has been produced for inhibiting the activity of an
 CC mRNA molecule. The composition comprises: (a) a targetting portion which
 CC is an oligonucleotide or oligonucleotide analogue specifically
 CC hybridisable with the 5' end of the mRNA molecule; (b) a reactive portion
 CC which is an amine or metal complex that chemically modifies or cleaves
 CC the 5' cap structure of the mRNA molecule; and (c) a linker that connects
 CC the targetting and reactive portions so that, upon hybridisation of the
 CC targetting portion to the mRNA, the reactive portion can contact the 5'
 CC cap. The present sequence represents an oligonucleotide ISIS-3251 for
 CC tethering triethylene tetramine to the 3' terminus of an oligonucleotide
 CC via a modified uridine tether, for use in the inhibiting of mRNA
 CC activity. The composition can be used for masking the 5' cap to inhibit
 CC binding of eukaryotic initiation factor 4E (eIF-4E) to the mRNA or for
 CC inhibiting production of a protein encoded by the mRNA in a eukaryotic
 CC cell. This has possible therapeutic applications, e.g. for treating viral

CC infections. (Updated on 25-MAR-2003 to correct PF field.)

XX PT Treatment of airway diseases such as asthma - by topically applying
 adenosine-free antisense oligo:nucleotide to airway epithelium of
 subject.

XX PS Claim 5; Page 27; 71pp; English.

CC A method for treating airway disease in a subject has been produced,
 which involves the topical administration of an essentially adenosine
 free antisense oligonucleotide (ON) to the airway epithelium of the
 subject. The present sequence is an antisense oligonucleotide HSICAM1A52
 specific for the human intercellular adhesion molecule-1 (CAM-1). The
 method can be used to treat airway diseases such as cystic fibrosis,
 asthma, chronic obstructive pulmonary disease, bronchitis and other
 airway diseases characterised by an inflammatory response. By eliminating
 adenosine from the antisense ON, its liberation upon antisense
 degradation is prevented, thereby preventing adenosine-induced
 bronchoconstriction in patients with hyper-reactive airways

XX PT DNA encoding mutant ICAM-R poly:peptide(s) - useful for diagnosis and
 treatment of cell adhesion based disease conditions e.g. inflammation or
 asthma.

XX PS Example 4; Col 14; 111pp; English.

XX CC Probes AAV54837-42 were used to isolate lambda clone pVZ147 encoding
 human ICAM-R (intercellular adhesion molecule-R). ICAMs are polypeptides
 that are expressed on blood vessel endothelial cell surfaces and are
 involved in the adhesion events in various conditions. ICAM-R variants
 (see AAW71264-69) can be used to treat or monitor inflammatory conditions
 involving specific or nonspecific immune responses, asthma, tumour growth
 and/or metastasis and viral infections. The ICAM variants are produced
 recombinantly, from expression libraries of mutated sequences, and the
 ones that are claimed are the ones that have been found to be especially
 involved in adhesion events. They can also be used to raise antibodies,
 also for use as therapeutic or diagnostic agents. (Updated on 25-MAR-2003

 PS AAV28150-54 represent deletion derivatives of target oligonucleotide ISIS
 XX 2302 (AAV28149). The oligonucleotides were used to demonstrate the method
 CC of the invention, where the goal was to purify oligonucleotide ISIS 2302.
 CC The specification describes a matrix that comprises a support and an
 CC affinity unit that specifically and reversibly binds a target
 CC oligonucleotide, and comprises a sequence of bases having the reverse
 CC complement of a hybridising portion of the target oligonucleotide. The
 CC matrix is used for affinity purification of synthetic oligonucleotides,
 CC specifically antisense agents, for treatment of hyperproliferative
 CC diseases, for treating a non-pathogen, non-hyperproliferative disease,
 CC e.g. Alzheimer's, for modulating expression of cell surface proteins, and
 CC to inhibit a eukaryotic pathogen, retrovirus or other viruses

 PS

XX AAV56349-V56366 are primers and probes used in the isolation of a novel
 CC human intercellular adhesion molecule, ICAM-R. This sequence is used in a
 CC method which investigates modulators of the interaction between ICAM-R
 CC and the 14.3.3 family member HSI-beta and tubulin. An anti-ICAM-R
 CC antibody optionally coupled to toxin or radionuclide, or an ICAM-R
 CC peptide, can block, inhibit or stimulate ligand/receptor interactions
 CC involving ICAM-R, particularly its effector functions involved in
 CC (non)specific immune responses. ICAM-R related agents may be used to
 CC treat or monitor inflammation, disorders involving T cell activation or
 CC macrophages, e.g. adult respiratory distress syndrome, stroke, Crohn's
 CC disease, multiple sclerosis, rheumatoid arthritis, asthma, tumour growth,
 CC human immune deficiency virus infection, diabetes, graft vs. host disease
 CC and many others. Antibodies may also be used for passive immunisation,
 CC for purifying, detecting or quantifying ICAM-R and for identifying ICAM-R
 CC expressing cells

 PT involving ICAM-R, especially those of the specific and non-specific
 PT immune systems.
 XX
 PS Example 4; Col 14; 108pp; English.
 XX
 CC This sequence is a primer for an ICAM immunoglobulin-like loop domain.
 CC The invention relates to antibodies (Ab) which bind specifically to the
 CC intercellular adhesion molecule receptor (ICAM-R), inhibiting the
 CC interaction between ICAM-R and alpha d/CD18. Abs with specific ICAM-R
 CC binding are useful in compositions for immunisation, and for purifying
 CC ICAM-R polypeptides and identifying cells expressing ICAM-R on their cell
 CC surface, modulating ligand/receptor binding and biological activities
 CC involving ICAM-R, especially inflammatory responses of the specific
 CC immune system, the non-specific immune system, monitoring and treating
 CC asthma, tumour growth, and/or metastasis, and viral infection (e.g. HIV
 CC infection). In particular diseases involving an essential T cell
 CC activation (e.g. asthma, psoriasis, diabetes, graft vs. host disease,
 CC tissue transplant rejection, and multiple sclerosis) may be treated with
 CC anti-ICAM-R antibodies. The Abs specifically bind to and identify ICAM-R
 CC and disrupt ICAM-R to cell adhesion molecule, especially alpha d/CD18
 CC binding

PT	cancers.
XX	
XX	Claim 18; Page 399; 1343pp; English.
PS	
CC	The present invention describes a new composition comprising an antisense
CC	oligonucleotide (ON) with low adenosine (up to 15%), which targets
CC	nucleic acids involved in bronchoconstriction, allergies, and/or
CC	inflammation. The ON can have antiinflammatory, antiallergic,
CC	antisthmatic, cytostatic and analgesic activities. The compositions are
CC	useful for the treatment of diseases associated with inflammation,
CC	impaired airways, including lung disease and diseases whose secondary
CC	effects afflict the lungs of a subject. They can be used for treating
CC	e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma,
CC	impaired respiration, respiratory distress syndrome, pain, cystic
CC	fibrosis, pulmonary hypertension, emphysema, chronic obstructive
CC	pulmonary disease (COPD), and cancers such as leukaemias, lymphomas,
CC	carcinomas, and cancers which may metastasise to the lungs, including
CC	breast and prostate cancer. The reduction of the adenosine content of the
CC	ONs reduces side effects. The A-containing ONs break down with the
CC	release of deoxyadenosine which activates adenosine receptors causing
CC	bronchoconstriction and inflammation. AAA32313 to AAA35312 represent the
CC	nucleotide sequences given in the sequence listing from the present
CC	invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185
CC	sequences are also called SEQ ID NO:1 to 185, but the sequences differ
CC	from the previously named sequences. SEQ ID NO:11 to 1680 (AAA32323 to
CC	AAA33992) are specifically claimed ONs from the present invention. N.B.
CC	Sequences given in the disclosure of the present invention do not match
CC	up with their corresponding SEQ ID NO: sequences given in the sequence
CC	listing

XX	Identifying modulators of protein kinase C phosphorylation of human
PT	intercellular adhesion molecule polypeptide.
XX	
PS	Example 4; Col 117-118; 122pp; English.
XX	
CC	This invention describes a novel method for identifying a compound that
CC	modulates phosphorylation of human intercellular adhesion molecule
CC	polypeptide (ICAM-R) by protein kinase C isoform. The method comprises:
CC	(a) exposing a purified peptide consisting of the cytoplasmic domain of
CC	ICAM-R to protein kinase C isoform and labeled adenosine triphosphate in
CC	the presence and absence of a test compound; (b) measuring labeled
CC	phosphate transferred to the peptide; and (c) identifying a test compound
CC	that affects transfer of the labeled phosphate as a modulator compound.
CC	The method is useful for identifying compounds that modulate the
CC	phosphorylation of human intercellular adhesion molecule polypeptide
CC	which might form the basis for the development of therapeutic and
CC	diagnostic agents. This sequence represents a probe used in the method of
CC	the invention

 PT New positively charged oligomeric conjugate, useful for delivering e.g.
 PT oligonucleotides to cytosol and cell nuclei, contains a controlled number
 PT of positively charged amino groups.
 XX
 XX Disclosure; Page 21; 64pp; English.
 XX
 CC ISIS 1939 is an antisense phosphorothioate oligonucleotide that is
 CC targeted to the 3' non-coding region of intercellular adhesion molecule-1
 CC (ICAM-1) mRNA. It was used to demonstrate the ability of novel oligomeric
 CC conjugates to transfer biological molecules, such as oligonucleotides,
 CC into cells. These novel oligomeric conjugates contain an oligomer with a
 CC polymerization degree (PD) of 5-50, preferably 10-40, and more preferably
 CC 20, formed from monomeric components having free NH₂ in a number equal
 CC to or higher than 50% of the PD. An example of is histidylated polylysine
 CC (see AA95255 and AA95256). The oligomeric conjugate induces a membrane
 CC destabilization at acidic pH allowing the transfer of biological
 CC molecules to the cytoplasm or cell nucleus in vitro, in vivo or ex vivo.
 CC Suitable biological molecules are antisense, triplex-forming and ribozyme
 CC molecules, RNA decoys, and antigenic peptides, e.g. for the treatment of
 CC cancer, inflammatory or immunological diseases such as graft rejection,
 CC allergy or autoimmunity, or infectious diseases (claimed). Larger DNA is
 CC not transferred. Tumour necrosis factor-induced ICAM-1 expression was
 CC inhibited by ISIS 1939 in the presence of 20 uM histidylated oligolysines

 XX
 XX Hybrid fusion proteins comprising intercellular adhesion molecule or its
 PT variants useful, for treating inflammatory conditions, Crohn's disease,
 PT atherosclerosis and diabetes.
 XX
 XX Example 4; Col 14; 109pp; English.
 PS
 XX This invention relates to a hybrid fusion protein comprising an
 CC intercellular adhesion molecule (ICAM-R) amino acid fragment at its amino
 CC terminus and a constant domain of an immunoglobulin heavy chain at its
 CC carboxy terminus. ICAM-R polypeptides are useful for treating and
 CC monitoring inflammatory conditions such as adult respiratory distress
 CC syndrome, multiple organ injury syndrome secondary to septicemia or
 CC trauma, reperfusion injury of tissue, acute glomerulonephritis, reactive
 CC arthritis, dermatosis, stroke, thermal injury, haemodialysis,
 CC leukapheresis, ulcerative colitis, Crohn's disease, necrotising
 CC enterocolitis, granulocyte transfusion associated syndrome,
 CC atherosclerosis and cytokine induced toxicity. ICAM-R polypeptides are
 CC also useful for treating conditions resulting from a response of the
 CC specific immune system in a mammal e.g. psoriasis, organ/tissue
 CC transplant rejection and autoimmune diseases including Raynaud's
 CC syndrome, autoimmune thyroiditis, multiple sclerosis, rheumatoid
 CC arthritis, diabetes and lupus erythematosus. ICAM-R products and ICAM-R
 CC related products are also useful in monitoring and treating asthma,
 CC tumour growth and/or metastasis, and viral infection (e.g. HIV
 CC infection). Sequences AAA97090 and AAB13036 represent the human ICAM-R
 CC DNA and protein sequences. Sequences AAA97091-A97112 represent ICAM-R DNA
 CC fragments, PCR primers and probes, all used in the identification of the
 CC ICAM-R DNA sequence. AAA97113-A97123 and AAA97129-A97152 represent
 CC primers used in the production of humanised anti-ICAM-R antibody ICR-8.1,
 CC and fragments of the humanised antibody. Sequences AAA97124-A97128,
 CC AAA97132, AAA97144 represent ICR-8.1 sequences. Sequences AAA97153-A97176
 CC excluding AAA97155-A97156 represent primers used in the production of
 CC humanised anti-ICAM-R antibody ICR-1.1, and fragments of the humanised
 CC antibody. Sequences AAA97155-A97156 and AAB13047-B13048 represent murine
 CC ICR-1.1 sequences. DNA and peptide sequences used in the production of
 CC the chimeric protein of the invention include AAA97177-A97188 and
 CC AAB13050-B13051

 PS
 XX The present invention describes a monoclonal antibody (MAB) (I), produced
 CC by the hybridoma cell line 81K2F (ATCC HB 11692). Also described are: (I)
 CC a hybridoma cell line 81K2F; and (2) a MAB (II), that competes with (I)
 CC for binding to ICAM-R (intracellular adhesion molecule receptor) (III).
 CC (II) mimics the activity of natural binding proteins through which
 CC intercellular and intracellular activities of (III) are modulated. (II)
 CC is also used for modulating the immune responses. (I) is used for
 CC immunisation as well as for purifying (III). They are also useful in
 CC modulating the ligand/receptor binding biological activity involving
 CC (III) especially those effector functions of (III) involved in specific
 CC and non-specific immune system responses. Inflammatory conditions which
 CC may be treated or monitored with related products of (III) include
 CC conditions resulting from a response of the non-specific immune system in
 CC a mammal e.g. adult respiratory distress syndrome, multiple organ injury
 CC syndrome secondary to septicemia or trauma, reperfusion injury of tissue,
 CC acute glomerulonephritis, reactive arthritis, stroke, ulcerative colitis
 CC and atherosclerosis, and conditions resulting from a response of the
 CC specific immune system in a mammal, e.g. psoriasis, organ/tissue.
 CC transplantation rejection, autoimmune diseases such as autoimmune
 CC thyroiditis, multiple sclerosis, rheumatoid arthritis, diabetes and lupus
 CC erythematosus. AAA08236 to AAA08334, and AAY82435 to AAY82451 represent
 CC sequences used in the exemplification of the present invention

 XX Low adenosine (A) content antisense oligonucleotides which do not trigger
 PT adenosine receptors during metabolism, useful e.g. for treating cancers
 PT and respiratory obstructions.
 XX
 XX Claim 14; Page 145; 1592pp; English.
 PS
 XX The present invention describes low adenosine (A) content antisense
 CC oligonucleotides and compositions (I) comprising them. In the antisense
 CC oligonucleotides the A is replaced by a 'Universal' or alternative base.
 CC (I) can have respiratory, bronchodilator, antiinflammatory, analgesic,
 CC immunosuppressive, antiasthmatic, hypotensive and cytostatic activities.
 CC The antisense oligonucleotides and (I) can be used to down-regulate the
 CC expression and or activity of target polypeptides associated with
 CC lung/respiratory disorders and malignancies, such as stimulating and
 CC activating peptide factors and transmitters, transcription factors,
 CC immunoglobulins and antibodies, antibody receptors, cytokines and
 CC chemokines, endogenously produced specific and non-specific enzymes,
 CC binding proteins, adhesion molecules and their receptors, cytokine and
 CC chemokine receptors, adenosine receptors, bradykinin receptors, central
 CC nervous system (CNS) and peripheral nervous and non-nervous system
 CC receptors, CNS and peripheral nervous and non-nervous system peptide
 CC transmitters, defensins, growth factors, vasoactive peptides and
 CC receptors, binding proteins and malignancy associated proteins. The
 CC antisense oligonucleotides may be used in this way to treat disorders
 CC including respiratory obstruction (especially pulmonary obstruction
 CC and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or
 CC surfactant hypoproduction which are associated with a disease or
 CC condition selected from pulmonary vasoconstriction, inflammation,
 CC allergies, asthma, impeded respiration, respiratory distress syndrome
 CC (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease (COPD),
 CC pulmonary transplantation rejection, pulmonary infections, bronchitis,
 CC and/or cancer. AAF18434 to AAF21543 represent human polynucleotide
 CC fragments and antisense oligonucleotides used in the exemplification of
 CC the present invention

 DR
 XX New substituted aryl conjugates of parent molecules, especially
 PT oligonucleotides, having improved transmembrane and intracellular
 PT transport properties, useful as medicaments or diagnostic agents.
 XX
 XX Disclosure; Page 8; 28pp; German.
 PS
 XX This invention describes a novel conjugate (I) which consists of (A) a
 CC molecule to be transported and (B) at least one aryl residue of formula -
 CC Ar-(X-C(V)-R.1) n (II). Ar = group containing at least one aromatic ring;
 CC X = O or N (sic); Y = O, S or NH-R.2 (sic); R.1 = optionally substituted
 CC 1-23C alkyl (optionally containing double and/or triple bonds); R.2 =
 CC optionally substituted 1-18C alkyl (optionally containing double and/or
 CC triple bonds); n = integer of 1 or more. (A) is bonded to (B) directly or
 CC via a chemical group, provided that the chemical group is other than CH.2
 CC -S if the bond is via a phosphodiester linkage of (A). The invention also
 CC describes (i) the preparation of a conjugate (I') of (A') a molecule to
 CC be transported and (B') at least one aryl residue (not restricted to
 CC (II)), by preparing (A') containing a reactive function at the position
 CC at which (B') is to be bonded, preparing (B') and reacting (A') and (B');
 CC and (ii) the use of aryl groups (II) (optionally bonded via a chemical
 CC group) for transporting (A) across biological membranes. The products of
 CC the invention have cytostatic, virucide, vasotropic, dermatological,
 CC antipariatic and antiasthmatic activity and can be used for gene
 CC therapy. Conjugation of (A) with (B) is useful for transporting (A)
 CC across biological membranes or into eukaryotic or prokaryotic cells
 CC (specifically bacterial, yeast or mammalian cells, including human cells,
 CC particularly tumor cells). Medicaments, diagnostic agents and test kits
 CC containing (I) are also claimed. Typically (I) are antisense
 CC oligonucleotide derivatives for tumor therapy; oligonucleotide drugs for
 CC treating viral infections or diseases associated with integrins or cell-
 CC cell interactions (e.g. restenosis, vitiligo, psoriasis or asthma); or
 CC labeled oligonucleotides for in vivo diagnostic use, e.g. by in situ
 CC hybridization. Conjugation with (B) markedly improves the cellular uptake
 CC of (A), e.g. in tumor cells. (B) include fluorescent derivative residues,
 CC in which case the conjugates (I) are fluorescently labeled, allowing
 CC microscopic monitoring of cellular uptake etc. The cellular uptake of (I)
 CC is superior to that obtained using other conjugated groups related to
 CC (II); e.g. oligonucleotides conjugated with fluorescein diacetate (within
 CC the scope of (B)) have superior uptake to corresponding fluorescein
 CC conjugates

 New genotyping oligonucleotide, useful for detecting the presence,
 PT absence or identity of single polynucleotide polymorphism in a nucleic
 PT acid sample.
 XX
 Claim 1; Page 50; 83pp; English.
 PS
 XX Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
 CC primer extension (SNPE) primers, and the sequences of regions flanking
 CC sites of single nucleotide polymorphisms SNPs. The present invention
 CC includes kits for determining the presence or absence of a SNP, using the
 CC oligonucleotides of the invention. The PCR primers are used to amplify a
 CC SNP flanking sequence, the SNPE primer is used as a genotyping primer.
 CC The oligonucleotides are useful for genotyping a nucleic acid sample by
 CC performing a single-nucleotide primer extension reaction. The
 CC oligonucleotides are useful for determining the presence, absence or
 CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to
 CC assess by association analysis the genotype of an individual or group of
 CC individuals, having a pathological phenotypic trait suspected of being
 CC caused by one or more SNPs. Phenotypic traits include diseases e.g.
 CC agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
 CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
 CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
 CC traits also include symptoms of or susceptibility to multifactorial
 CC disease of which a component is or may be genetic such as autoimmune
 CC diseases, including, rheumatoid arthritis, multiple sclerosis,
 CC inflammation, cancer, nervous system diseases and infection by pathogenic
 CC microorganism. The method is also useful in forensic investigations and
 CC paternity analysis. The present sequence represents a PCR primer specific
 CC for a human SNP containing DNA sequence

XX New DNA-peptide nucleic acid chimeras, useful e.g. as antisense agents
XX for treating e.g. cancer, also as diagnostic probes and primers.
XX Disclosure; Page 25; 54pp; German.
XX This invention describes novel polyamide-oligonucleotide derivatives (I)
XX and their physiologically acceptable salts of formula F(DNA)-Li-q(PNA-
XX Li) r(DNA-Li) s(PNA) t xF' where q, r, s, t = 0 or 1, with the sum of
XX two or more adjacent letters at least 2; x = 1-20; DNA = nucleic acid
XX (such as DNA or RNA or their known derivatives); Li = covalent linkage
XX between DNA and PNA, i.e. a bond or a residue containing at least one
XX atom of carbon, nitrogen, oxygen or sulfur; PNA = polyamide structure
XX containing at least one nucleobase different from thymine; and F, F' =
XX end groups and/or are connected through a covalent bond. The products of
XX the invention have anticancer, antiproliferative, antiviral, hepatotropic
XX and vasotropic activity and can be used for the inhibition of gene
XX expression by antisense, ribozyme, sense, or triple-helix methods, or by
XX binding to proteins (aptamers). (I) are used for treating diseases caused
XX by viruses (human immune deficiency, herpes simplex, influenza, vesicular
XX stomatitis, hepatitis B or papilloma), or mediated by integrins or cell-
XX cell adhesion reactions, for treating cancer, or for inhibiting
XX restenosis, particularly as antisense reagents. They are also useful in
XX heterogeneous or homogeneous assays, as primers or probes, particularly
XX where the target is amplified before being detected by hybridization, for
XX diagnosis of genetic, malignant or pathogen-related diseases. (I) retain
XX the increased affinity for complementary strands and better stability in
XX serum, associated with conventional peptide nucleic acids (PNA), but lack
XX the disadvantages, i.e. have improved cellular uptake, do not aggregate
XX in aqueous solution, and have reduced affinity for purification
XX materials, reduced cytotoxicity, better sequence specificity. They are
XX more active than either DNA or PNA oligomers. When used as probes, (I)
XX show different responses to base-pair mismatches in the DNA and PNA
XX segments, allowing better discrimination between pathogenic and non-
XX pathogenic conditions such as the transition from proto-oncogene to
XX oncogene, also, when used as primers, with the PNA segment at the 5'-end,
XX they produce amplicons resistant to 5'-exonuclease, allowing this enzyme
XX to be used to eliminate RNA or DNA primers. The DNA component allows
XX additional reactions not possible with PNA alone, e.g. 3'-tailing and (I)
XX may be incorporated into a gene. AAH49208-AAH49264 represent
XX oligonucleotides used to illustrate the method of the invention

 XX Novel hybridoma cell line useful for producing monoclonal antibody for
 PT treating inflammatory conditions, immune system disorders and infectious
 PT diseases, is deposited under specified ATCC accession number.
 PT
 XX Page 8; Example 4; 126pp; English.
 PS
 XX The invention relates to a novel hybridoma cell line (I) ATCC HB 12190.
 CC (I) is useful for producing an intercellular adhesion molecule (ICAM)
 CC monoclonal antibody (II). (II) is useful for treating inflammatory
 CC conditions including adult respiratory distress syndrome, multiple organ
 CC injury syndrome secondary to septicemia or trauma, tissue reperfusion
 CC injury, acute glomerulonephritis, reactive arthritis, dermatosis with
 CC acute inflammatory components, stroke, thermal injury, haemodialysis,
 CC leukophereis, ulcerative colitis, Crohn's disease, necrotising
 CC enterocolitis, granulocyte transfusion associated syndrome, diabetes,
 CC atherosclerosis, cytokine-induced toxicity, psoriasis, organ/tissue
 CC transplant rejection, autoimmune diseases including Raynaud's syndrome,
 CC autoimmune thyroiditis, multiple sclerosis, rheumatoid arthritis, lupus
 CC erythematosus, asthma, tumour growth and/or metastasis, viral infection,
 CC tissue transplant rejection, graft versus host disease and multiple
 CC sclerosis. (II) is also useful for immunisation, for purifying ICAM-R
 CC polypeptides and for identifying cells that display the polypeptides on
 CC their surfaces. AAS09279-AAS09380 represent ICAM coding sequences, PCR
 CC primers and related sequences of the invention

 XX New derivatized oligonucleotide, useful for effecting cellular uptake,
 XX comprises several linked nucleosides bearing a substituent such as
 XX steroid/reporter molecule, reporter enzyme or peptide.
 XX Example 4; Page 7; 23pp; English.
 PS The invention relates to a derivatized oligonucleotide comprising several
 XX linked nucleosides having a functionalised nucleoside bearing a
 XX substituent such as steroid/reporter molecule, non-aromatic lipophilic

CC molecule, reporter enzyme, peptide, protein, water/lipid soluble vitamin,
 CC RNA cleaving complex, metal chelator, porphyrin, alkylator, hybrid photo-
 CC nuclease/intercalator or aryl azide photo-crosslinking agent. The
 CC oligonucleotide is useful for effecting cellular uptake of the
 CC oligonucleotide by contacting an organism with the oligonucleotide. The
 CC oligonucleotide is useful in research and diagnostic methods, for
 CC assaying bodily states in animals, especially disease states, or for
 CC treatment of diseases through modulation of the activity of DNA or RNA.
 CC The oligonucleotide has improved transfer across cellular membranes and
 CC uptake properties. The effect of conjugation of an oligonucleotide with
 CC folic acid was determined by the inhibition of intercellular cell
 CC adhesion molecule-1 (ICAM-1). The present sequence represents a
 CC derivatized oligonucleotide oligomer

 DR Stimulating bactericidal permeability increasing protein in subject's
 XX tissue for inhibiting or preventing infection or invasion by bacteria in
 XX a subject, by administering lipoxin or lipoxin analog.
 PS Example; Page 78; 161pp; English.
 XX The invention relates to stimulating bactericidal permeability increasing
 XX protein (BPI) in a subject's tissue. The method involves administering a
 XX therapeutically effective amount of lipoxin or a lipoxin analogue, such
 XX that the subject's tissue expresses increased levels of BPI to treat
 XX infection. The method is useful for stimulating BPI in a subject's
 XX tissue, preferably mucosal cells e.g. oral epithelial cells or intestinal
 XX cells, and thus for inhibiting or preventing infection or invasion by
 XX bacteria in a subject. The method is useful for treating sepsis and
 XX infectious diseases. Sequences ACC85089-90 represent PCR primers for
 XX amplifying the human ICAM-1 cDNA, used in a transcriptional analysis of
 XX human BPI

CC presence and absence of test compound, detecting the label bound to the
CC immobilised binding partner and identifying a modulating compound as a
CC test compound that affects the label bound in the presence of the test
CC compound in comparison to the label bound in the absence of the test
CC compound) and identification of a compound that modulates phosphorylation
CC of ICAM-R by protein kinase C isoform (involving: exposing ICAM-R peptide
CC comprising amino acids 482-518 of ABG25651 to protein kinase C isoform
CC and labelled phosphate in the presence and absence of a test compound,
CC measuring labelled phosphate transferred to the ICAM-R peptide and
CC identifying a test compound that affects transfer of the labelled
CC phosphate as a modulator compound). The hybridoma cell line ATCC HB 12190
CC is useful in the production of monoclonal antibodies useful for
CC identifying compounds and for the treatment of conditions resulting from
CC a response of the nonspecific immune system in a mammal (e.g. adult
CC respiratory distress syndrome, multiple organ injury syndrome secondary
CC to septicemia, multiple organ injury syndrome secondary to trauma,
CC reperfusion injury of tissue, acute glomerulonephritis, reactive
CC arthritis, dermatosis with acute inflammatory components, stroke, thermal
CC injury, haemodialysis, leukapheresis, ulcerative colitis, Crohn's
CC disease, necrotising enterocolitis, granulocyte transfusion associated
CC syndrome, atherosclerosis and cytokine-induced toxicity) and conditions
CC resulting from a response of the specific immune system in a mammal (e.g.
CC psoriasis, organ/tissue transplant rejection and autoimmune diseases
CC including Raynaud's syndrome, autoimmune thyroiditis, experimental
CC autoimmune encephalomyelitis (EAE), multiple sclerosis, rheumatoid
CC arthritis, diabetes or lupus erythematosus), asthma, tumour growth and/or
CC metastasis and viral infection (e.g. HIV infection). The monoclonal
CC antibodies are readily available using immunogens comprising cells
CC naturally expressing intercellular adhesion molecule polypeptide (ICAM-R)
CC or its variants and display ligand/receptor binding biological activities
CC and/or immunological properties specific to ICAM-R. The present sequence
CC is a primer or probe used in the isolation of nucleic acids encoding
CC human ICAM-R.

XX Pharmaceutical composition for treating ailments associated with impaired
PT respiration, has oligo(s) antisense to specific gene(s) or its
PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
PT ubiquinone.

XX
XX Disclosure; SEQ ID NO 10442; 872pp; English.

XX The invention relates to a novel pharmacological composition, which has a
CC first active agent comprising an oligonucleotide antisense to the
CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
CC junctions of genes encoding a polypeptide associated with lung and/or
CC nasal airway dysfunction and a second active agent comprising an
CC antiinflammatory steroid and ubiquinone. A composition of the invention
CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
CC immunosuppressive, and cytostatic activity. The composition may have a
CC use in antisense gene therapy. The composition is useful for treating or
CC preventing a respiratory, lung or malignant disease or condition, also
CC for enhancing the prophylactic or therapeutic respiratory effect of an
CC antiinflammatory steroid in a subject, for reducing or depleting levels
CC of, or reducing sensitivity to adenosine, reducing levels of adenosine or
CC receptor, producing bronchodilation, increasing levels of ubiquinone or
CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
CC lung inflammation, lung allergies, or a respiratory disease or condition.

 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to

PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX PS Claim 15; SEQ ID NO 10442; 763pp; English.
 XX XX
 CC This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impaired respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 XX Inhibition of complement activation in human cell, tissue or bodily
 PT fluid, comprises contacting the cell, tissue or bodily fluid with
 PT oligonucleotide comprising 2' sugar modification(s), preferably 2'-
 PT methoxyethoxy modification.
 XX
 XX Disclosure; SEQ ID NO 1; 35pp; English.
 XX
 CC The invention relates to a method of inhibiting complement activation in
 CC a human cell, tissue or bodily fluid, comprising contacting the cell,
 CC tissue or bodily fluid with an oligonucleotide comprising at least one 2'
 CC sugar modification. The invention also relates to a composition
 CC comprising an oligonucleotide and a complement activation inhibitory
 CC molecule, where the oligonucleotide comprises at least one
 CC phosphorothioate modification and at least one 2'-methoxyethoxy
 CC modification. The oligonucleotide has at least one modified
 CC internucleotide linkage, which is a phosphorothioate. The oligonucleotide
 CC is an antisense oligonucleotide. The complement activation inhibitory
 CC molecule is Factor H. The 2' sugar modification is 2'-methoxyethoxy
 CC modification. The method is useful for inhibiting complement activation
 CC (such as inflammation) in a human cell, tissue or bodily fluid, in the
 CC treatment of abnormal and/or undesirable conditions which can arise as a
 CC result of complement activation. The method inhibits and/or modulates
 CC complement mediated immune responses using modified oligonucleotides that
 CC might incorporate modifications of characteristics such as compound
 CC stability and cellular uptake. This sequence represents an antisense
 CC oligonucleotide of the invention.

 PT Designing and selecting short double-stranded oligonucleotides for
 PT treating viral infections, cancer and genetic or metabolic diseases,
 PT comprises using gene chip and protein chip microarrays to identify
 PT specific DNA sequences.
 XX
 XX Example 3; Page 22; 58pp; English.
 XX
 CC The invention relates to screening, identifying or predicting, and
 CC assembling 19-25 nt double-stranded oligonucleotides (termed short double
 CC stranded oligonucleotides, SDO) as active pharmaceutical compositions
 CC for the treatment of viral infections, malignant tumours, and genetic and
 CC metabolic diseases, comprising screening and identifying a specific DNA
 CC sequence in an abnormal gene encoding a protein with gene chip and
 CC protein chip microarrays. The above method comprises screening the
 CC disease-causing genes, over-expressing in cells and/or tissues, with the
 CC gene chip and protein chip microarrays, identifying a specific DNA
 CC sequence within the abnormal gene encoding a protein or playing other
 CC biological roles with the assistance of computer and specific software,
 CC predicting efficacious 19-25 nt double-stranded oligonucleotides with a
 CC 5'-AU(T)CCG-3' or 5'-U(T)CCG-3' special pattern complementary to at
 CC least a portion of an RNA molecule and making sure that selected sequence
 CC is not localised within the stem-loop of target mRNA with any related
 CC software. Also included are pharmaceutical compositions of gene drugs
 CC (such as Dermogene, Lungene, Hepatogene, Leukogene, Lymphogene,
 CC Prostagene, Breastogene, Braintumogene and Skin-whitogene including but
 CC being not limited to part or all of the following components: single or a
 CC group of specific 19-25 nt dsRNA, 19-25 nt ssRNA-cDNA, 19-25 nt dsRNA
 CC and/or single-stranded RNA and/or DNA with the special pattern, 5'-
 CC CGCAT(U)-3' or its derivatives, one or more nucleic acid condensation
 CC agents (or none), one or more pharmaceutical carriers, one or more
 CC specific cell-targeting proteins and other active agents and additional
 CC materials) and a simplified method for predicting and selecting a
 CC specific and efficacious small double-stranded oligonucleotides (SDSO),
 CC antisense oligonucleotide molecules or short interfering RNA (siRNA)
 CC (comprising identifying a special pattern that can be localised in any
 CC position of an oligonucleotide sequence evaluating the specificity of a
 CC selected sequence). The short interfering RNA (siRNA) are targeted
 CC against genes involved in viral infection, malignant tumours, genetic and
 CC metabolic diseases. The methods are useful for designing and selecting
 CC short double-stranded oligonucleotides as a gene drug that can
 CC specifically inactivate a group of corresponding genes. The composition
 CC may be used for treating diseases or disorders associated with abnormal
 CC expression of genes in cells or tissues of humans or animals, such as
 CC viral infections, cancer, or genetic or metabolic diseases. The present
 CC sequence is a previously identified efficacious antisense
 CC oligonucleotide.

 PT Novel isolated small interfering RNA comprising sense RNA strand having
 PT sequence identical to human intracellular adhesion molecule mRNA, and
 PT antisense RNA strand, useful for treating angiogenic diseases such as
 PT cancer.
 XX
 PS Disclosure; SEQ ID NO 9; 71pp; English.
 XX
 CC The present invention relates to novel small interfering RNAs (siRNAs)
 CC comprising sense and antisense RNA strands forming a RNA duplex, where
 CC the sense RNA strand comprises nucleotide sequence substantially
 CC identical to a target sequence of 19-25 contiguous nucleotides in human
 CC or mouse intracellular adhesion molecule-1 (ICAM-1) nucleotide sequence
 CC (ADQ82749 and ADQ82750). ICAMs mediate cell-cell and cell-matrix
 CC interactions. The siRNAs of the invention specifically target and cause
 CC RNA-interference induced degradation of mRNA from ICAM-1 genes thus
 CC leading to inhibition of ICAM-1 mRNA expression. The siRNAs are useful
 CC for inhibiting cell adhesion or cell adhesion-mediated pathologies such
 CC as AIDS-related dementia, allergic conjunctivitis, allergic rhinitis,
 CC Alzheimer's disease, anglogenesis, asthma, atherosclerosis, toxic
 CC nephritis, immune-based nephritis, contact dermal hypersensitivity,
 CC corneal/limbic injury, type I diabetes, complications arising from type I
 CC diabetes, Graves' disease, inflammatory bowel disease, inflammatory lung

CC diseases, inflammatory sequelae of viral infections, inflammatory skin
 CC disorders, allograft rejection, immune cell interactions such as T-cell
 CC killing, mixed lymphocyte reaction, T-cell mediated B-cell
 CC differentiation, meningitis, multiple sclerosis, multiple myeloma,
 CC myocarditis, pulmonary fibrosis, reperfusion injury, restenosis,
 CC retinitis, rheumatoid arthritis, septic arthritis, stroke, tumour
 CC metastasis and uveitis. The siRNAs are also useful for treating an
 CC angiogenic disease such as cancer, diabetic retinopathy age-related
 CC macular degeneration, preferably age-related macular degeneration. The
 CC siRNAs are also useful for treating complications arising from type I
 CC diabetes such as diabetic retinopathy, diabetic neuropathy, diabetic
 CC nephropathy and macrovascular disease. The macrovascular disease is
 CC coronary artery disease, cerebrovascular disease or peripheral vascular
 CC disease. The present oligonucleotide is a ICAM-1 target sequence from
 CC which the siRNAs of the invention can be derived.

 XX

CC The present invention relates to novel small interfering RNAs (siRNAs) comprising sense and antisense RNA strands forming a RNA duplex, where the sense RNA strand comprises nucleotide sequence substantially identical to a target sequence of 19-25 contiguous nucleotides in human or mouse intracellular adhesion molecule-1 (ICAM-1) nucleotide sequence (ADQ82749 and ADQ82750). ICAMs mediate cell-cell and cell-matrix interactions. The siRNAs of the invention specifically target and cause RNA-interference induced degradation of mRNA from ICAM-1 genes thus leading to inhibition of ICAM-1 mRNA expression. The siRNAs are useful for inhibiting cell adhesion or cell adhesion-mediated pathologies such as AIDS-related dementia, allergic conjunctivitis, allergic rhinitis, Alzheimer's disease, angiogenesis, asthma, atherosclerosis, toxic nephritis, immune-based nephritis, contact dermal hypersensitivity, corneal/limbic injury, type I diabetes, complications arising from type I diabetes, Graves' disease, inflammatory bowel disease, inflammatory lung diseases, inflammatory sequelae of viral infections, inflammatory skin disorders, allograft rejection, immune cell interactions such as T-cell killing, mixed lymphocyte reaction, T-cell mediated B-cell differentiation, meningitis, multiple sclerosis, multiple myeloma, myocarditis, pulmonary fibrosis, reperfusion injury, restenosis, retinitis, rheumatoid arthritis, septic arthritis, stroke, tumour metastasis and uveitis. The siRNAs are also useful for treating an angiogenic disease such as cancer, diabetic retinopathy age-related macular degeneration, preferably age-related macular degeneration. The siRNAs are also useful for treating complications arising from type I diabetes such as diabetic retinopathy, diabetic neuropathy, diabetic nephropathy and macrovascular disease. The macrovascular disease is coronary artery disease, cerebrovascular disease or peripheral vascular disease. The present oligonucleotide is a ICAM-1 target sequence from which the siRNAs of the invention can be derived.

PT Mouse and human telomerase RNA gene promoters, useful for tumor specific
PT gene therapy.
XX
PS Disclosure; Fig 6; 109pp; English.
XX
CC The invention relates to promoter regions from mouse and human telomerase
CC RNA (TR) component genes. The TR gene promoter can be linked to a
CC heterologous gene, especially a gene encoding a cytotoxin, for therapy of
CC cancer, especially neoplasias. The telomerase is necessary for the
CC unrestricted proliferative capacity of many human cancers. Mutation or
CC dysregulation of the telomerase repression pathway may cause reactivation
CC or upregulation of telomerase expression in cancer. Substances,
CC identified in the methods, can be used to block transcription from the TR
CC gene promoter through interaction of the 5' regulatory sequences. These
CC substances, e.g. antisense oligonucleotides, transcription factors,
CC peptide nucleic acids and factors that disrupt signal transduction, are
CC useful for cancer therapy. In particular, gene therapy vectors
CC (especially pG162-codAupp) comprising the promoter and a viral thymidine
CC kinase gene can be used to convert a prodrug, e.g. gancyclovir, so that
CC neoplasia can be controlled or treated. Direct down-regulation of
CC telomerase RNA gene through manipulation of transcription factors may be
CC effective anticancer therapy and the cloning of the hTR gene promoter
CC allows the analysis of therapeutic molecules which modulate hTR promoter
CC activity. Sequences AAZ07623-80 represents PCR primers for amplifying
CC human TR gene (hTR) promoter sequence

 PT Detection of cancers comprises assaying for a genetic mutation associated
 PT with cancer.
 XX
 PS Disclosure; Page 29; 99pp; English.
 XX
 CC This is an exemplary oligonucleotide primer, for use in the detection of
 CC neoplastic related gene mutations. There are over 40 known proto-
 CC oncogenes and suppressor genes to date, which control growth,
 CC development, and cell differentiation. Regulation of these genes can,
 CC under certain circumstances, be altered and normal cells can assume
 CC neoplastic growth characteristics. The invention provides a method for
 CC detecting a neoplastic disorder of the head and neck or lung in a
 CC subject. The detection of a target mutant nucleotide sequence in the
 CC saliva is indicative of a neoplastic disorder of the head, neck or lung.
 CC This allows early detection and therefore treatment of the preneoplasia
 CC or cancer, and can also be used to monitor high risk patients undergoing
 CC chemoprevention or chemotherapy

 PT Novel antisense compounds capable of modulating expression of human
 PT receptor activator of NF-kappaB useful for diagnosis, prophylaxis and
 PT treatment of diseases associated with expression of RANK.
 XX
 PS Claim 14; Col 43; 40pp; English.
 XX
 CC The present sequence is one of a number of antisense compounds of 8 to 30
 CC nucleobases in length that have been designed to target a 5'untranslated
 CC region, start codon, coding region or 3'untranslated region of the human
 CC receptor activator of NF-kappaB (RANK). The antisense compounds
 CC specifically hybridise with and inhibit the expression of RANK. The
 CC antisense oligonucleotides are useful for inhibiting the expression of
 CC human RANK in human cells or tissues. They can be utilised for
 CC diagnostics, therapeutics for the treatment of diseases associated with
 CC the expression of RANK, prophylaxis e.g. to prevent or delay infection,
 CC inflammation or tumour formation, and as research reagent. The antisense
 CC compounds are safely and effectively administered to humans

 PT Novel antisense compound 8-30 nucleobases in length targeted to a nucleic
 PT acid molecule encoding human mdm-2 useful for modulating the expression

PT of human mdm-2 and reducing hyperproliferation of human cells.

XX Example 9; Col 31; 77pp; English.

XX The present invention relates to an antisense compound 8-30 nucleobases in length targeted to nucleobases 1-308 of the 5' untranslated region, CC 1776-1806 of the translation termination codon region or 1818-2370 of the CC 3' untranslated region of a nucleic acid molecule encoding human mdm-2. CC The invention is useful for reducing hyperproliferation of human cells, CC modulating the expression of mdm2 in human cells or tissues or in vitro. CC The hyperproliferative disorder includes cancer or psoriasis

XX An antisense compound, useful for treating e.g. cancer, comprises

PT nucleobases targeted a region (e.g. translation termination codon region)

PT of a nucleic acid encoding human mdm2.

XX Example 9; Page 18; 81pp; English.

XX The present invention relates to antisense compounds, 8-30 nucleobases in

CC length targeted to the 5' untranslated region, translation termination CC codon region, 3' untranslated region, coding region or translation start CC site of a nucleic acid encoding human mdm2, where the antisense compound CC modulates the expression of human mdm2. The antisense oligonucleotides of CC the invention are useful for encoding human mdm2 and for inhibiting the CC expression of human mdm2. They may be used for treating an animal having CC a disease or condition associated with amplification of mdm2 gene or CC overexpression of mdm2 e.g. a hyperproliferative disorder such as cancer CC (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis, CC fibrosis, atherosclerosis or restenosis, tumours, colorectal carcinoma CC and chronic myelogenous leukemia. The antisense compound may be CC administered with a chemotherapeutic agent to overcome drug resistance. CC The antisense compound reduces hyperproliferation of human cells. The CC method, which involves the use of the antisense compound, is also useful CC for detecting the role of mdm2 expression in various cell functions and CC physiological processes and useful in both clinical research and CC diagnostic tools. AAS2942-AAS29507 represent the human mdm2 antisense CC oligonucleotides of the present invention

XX Determining the relative copy number of a group of target nucleic acid
 PT molecules present in a sample by performing a first or second PCR in a
 PT PCR mixture and quantifying the number of copies of the second target
 PT nucleic acid product.
 XX
 XX Example 1; Fig 8; 118pp; English.
 XX

XX The present invention describes a multiplex real-time quantitative PCR
 CC method for determining the relative copy number of a group of target
 CC nucleic acid molecules present in a sample. The method comprises: (1)
 CC performing a first PCR in a PCR mixture; (2) performing a second PCR in a
 CC PCR mixture; and (3) quantifying the number of copies of the second
 CC target nucleic acid product present in the sample containing the target
 CC nucleic acid molecule. Also described: (1) quantifying the copy number of
 CC a group of target nucleic acids in a sample; and (2) determining whether
 CC a subject is at risk of acquiring Alzheimer's disease. The method is
 CC useful for determining the relative copy number of a group of target
 CC nucleic acid molecules present in a sample for determining whether a
 CC subject is at risk of acquiring Alzheimer's disease. ACC99620 to ACC99730

 CC The invention relates to a novel pharmaceutical composition, which has a
 CC first active agent comprising an oligonucleotide antisense to the
 CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
 CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
 CC junctions of genes encoding a polypeptide associated with lung and/or
 CC nasal airway dysfunction and a second active agent comprising an
 CC antiinflammatory steroid and ubiquinone. A composition of the invention
 CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
 CC immunosuppressive, and cytostatic activity. The composition may have a
 CC use in antisense gene therapy. The composition is useful for treating or
 CC preventing a respiratory, lung or malignant disease or condition, also
 CC for enhancing the prophylactic or therapeutic respiratory effect of an
 CC antiinflammatory steroid in a subject, for reducing or depleting levels
 CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
 CC receptor, producing bronchodilation, increasing levels of ubiquinone or
 CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
 CC lung inflammation, lung allergies, or a respiratory disease or condition.

 XX
 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 XX Claim 15; SEQ ID NO 13244; 763pp; English.
 PS
 XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has antiallergic, antiinflammatory, antiasthmatic, is a
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 DR
 XX New antisense compound, having a sequence targeted to a nucleic acid
 PT encoding mPGES-1, useful for preparing a composition for treating e.g.,

PT inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
 PT ischemia.
 XX Claim 4; SEQ ID NO 1199; 132pp; English.
 XX The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microosomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulator, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, neurotropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

 DR
 XX Novel single or multiple target oligonucleotide anti-sense to e.g.
 PT initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
 PT RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
 PT asthma.
 XX
 XX Claim 2; SEQ ID NO 723; 174pp; English.
 PS
 XX The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

XX

CC The invention relates to a DNA methylation inducer (I) containing double-stranded (ds)RNA that targets the region which contains CpG or CpNG (N is A, T, C or G) on DNA in mammalian cell, or expression vector (VI) having DNA that codes dsRNA that targets the region which contains CpG or CpNG on DNA in mammalian cell. (I) is useful in the DNA methylation process, which involves introducing (I) in a mammalian cell, where the mammalian cell is obtained from human. (I) is useful as gene expression inhibitor or cell growth inhibitor. A gene expression inhibitor (II) is useful for suppressing gene expression, where the gene is a disease related gene relevant to a disease, and the expression of the gene causes the disease. The gene is erbB2 and the disease is the tumour. (I) is useful for controlling various biological activities in a mammal by controlling the transcription level of the respective gene by methylating the respective DNA. (I) or (II) enables specific methylation of the CpG island-containing domain on a gene promoter of the target gene, where the methylation of a promoter suppresses the expression of the target gene. (I) induces sequence specific DNA methylation in a plant, and controls the expression of the specific gene at the transcription level. (I) enables DNA methylation in the promoter region of a gene, where the methylation changes the structure of the DNA, enabling suppression of the gene expression at the transcription level (DNA to mRNA). This sequence corresponds to an E-cadherin gene PCR primer used in the method to silence gene expression in cells.

XX

CC This invention relates to a novel activated mutant protein tyrosine kinases and associated methods for diagnosing cancer and screening for anti-cancer agents. Protein kinases are signalling molecules involved in tumorigenesis. Mutational analysis of the human tyrosine kinase gene family identified somatic alteration sin 1 in 5 colorectal cancers, with the majority of mutations occurring in the NTRK3, FES, GUCY2F and MCK4/MLK4 genes. Most were identified in the kinase domain. The invention may be useful for the production of compounds with a cytostatic activity acting as protein tyrosine kinase inhibitors or guanylate cyclase stimulators. The invention may be useful for developing methods for detecting mutations involved in cancer or screening for anti-cancer agents. The present sequence is that of a human-derived oligonucleotide which is related to the invention.

XX PT Polymorphic bovine DNA markers - used in genetic identification, gene
XX PT mapping, and selective breeding.
XX PS Table 7; Page 397; 517pp; English.
XX CC The sequence is that of a bovine microsatellite sequence obtd. by
CC screening a library of bovine MboI DNA fragments of between 250 and 500
CC bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
CC clones cross-hybridised. Assuming independent distribution of
CC microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
CC in the bovine genome is estimated at >100,000. The sequence information
CC for ca. 230 such bovine microsatellites is summarised in the
CC specification and indexed herein (see below). The sequences upstream and
CC downstream of the microsatellite sequence were used to generate the
CC required PCR primers for in vitro amplification of the corresp.
CC microsatellite (using the program OPTIPRIM). The microsatellites may be
CC used to identify individuals, for parentage testing, and in the genetic
CC mapping of economic trait loci, or genes involved the determinism of
CC economically important traits esp. in cattle, to allow selective

 XX New phospho:di:esteric oligo:nucleotide(s) - which exert a specific and
 PT selective cytotoxic effect on tumour cells, for treating both solid and
 PT liquid tumours.

XX Claim 11; Page 4; 38pp; English.

PS The present phosphodiesteric oligonucleotide is based on the generic

CC formula, in the 3'-5' or 5'-3' direction: (Gata')a''-(Gbrb')b''-

CC (Gctc')c''-(Gdtd')d''-(Gete')e''-(Gftf')f''-(Ggtg')g''-N', where: N and

CC N' = T or G, equal or different from each other; x = 0-8, equal or

CC different from each other; a, b, c, d, e, f, and g = 0-10, equal or

CC different from each other; a', b', c', d', e', f', and g' = 0-30, equal

CC or different from each other; a'', b'', c'', d'', e'', f'', and g'' = 1-

CC 16, equal or different from each other; Oligonucleotides of this generic

CC sequence (see also AAT93811-27) are believed to selectively bind and

CC of tumoural cell line. They have specific and selective cytotoxic

CC activity against tumour cells, and can be used for treating tumours of

CC the liquid type, in particular of lymphoblastic origin, and of solid

CC type, in particular lymphomas. The present oligonucleotide is known, but

CC no biological activity has been reported until the reported cytotoxic

CC antitumour activity. (Updated on 25-MAR-2003 to correct PR field.)

XX Oligo:nucleotide which binds to retroviral nucleocapsid protein with high

PT affinity - used in targeted molecules, transduced cells and gene therapy

PT vectors for treatment of retroviral infections such as those caused by

PT HIV.

XX Claim 7; Page 56; 70pp; English.

XX This sequence represents an oligonucleotide which binds to a retroviral

CC nucleocapsid (NC) protein with high affinity. The invention relates to a

CC targeted molecule which binds to a retroviral nucleocapsid protein with

CC high affinity and comprises the oligonucleotide and a fusion partner.

CC Retroviral nucleocapsid proteins, such as NC and the Gag precursors, bind

CC to specific nucleic acid sequences with high affinity. This binding is

CC dependent upon the zinc fingers of the NC protein and has a strong

CC hydrophobic component. The specific nucleic acid sequences which bind NC

CC are useful as molecular decoys for retroviral NC proteins, for making

CC fusion proteins which inactivate retroviral NC proteins, in screening

CC assays for detecting molecules which inactivate retroviral NC proteins. In

CC nucleic acid binding, and for purification of retroviral NC proteins. In

CC particular, the targeted molecules, the transduced cells and gene therapy

CC vectors based on the oligonucleotides can be used for treatment and

CC prevention of retroviral infections such as those caused by HIV

Displacement chromatography for purification of peptide samples by non-homogeneous application of sample components to chromatography bed.

Example 2; Page 22; 37pp; English.

The present invention describes a method (I) for sample displacement chromatography separation. The method comprises applying a multicomponent sample to one end of a chromatography bed, distributing the sample along the bed by passing non-eluting mobile solvent phase over the bed, and recovering a desired component of the sample from at least a portion of the bed. The sample components are applied in a non-homogeneous manner to enhance concentration of at least one component with relatively low and/or high affinity for the stationary phase material, respectively, during an earlier and later part of the sample application. The method is useful for chromatographic separation of samples. The method permits recovery of sample components at significantly higher concentrations and generally makes more efficient use of the stationary phase material. The method allows ten-fold greater loading than comparable gradient elution separation, it involves minimal use of costly HPLC solvents and fraction analysis, avoids the use of displacer solution during actual separation and operating costs are lower. The present sequence represents a 20-mer oligonucleotide which is used in an example from the present invention for the purification of an oligonucleotide by sample displacement chromatography

XX (ISIS-) ISIS PHARM INC.

XX Monia BP, Cowsert LM;

XX WPI; 2000-282710/24.

New antisense oligonucleotides targeting nucleic acids encoding human MDMX useful for inhibiting MDMX expression and for treating diseases associated with MDMX expression e.g. tumor formation, inflammation.

Example 15; Col 97-98; 51pp; English.

This invention describes a novel antisense compound (I), 8-30 nucleobases in length, targeted to a nucleic acid encoding a human MDMX. (I) specifically hybridizes with and inhibits the expression of human MDMX. The products of the invention have anticarcinogen, antiinflammatory and antinfectious activity. Synthesized chimeric oligonucleotides targeted to human MDMX, 20 nucleotides in length, composed of a central gap region consisting of ten 2'-deoxynucleotides flanked on both sides by 5-nucleotide wings were tested for antisense inhibition of MDMX expression. Results of real-time quantitative polymerase chain reaction (PCR) showed 71 out of the 159, 20 base pair sequences, all fully defined in the specification, demonstrated at least 30% inhibition of MDMX expression. The antisense oligonucleotides are useful for effective and specific modulation, particularly inhibition of MDMX expression, and may be used in treating humans or animals suspected of having or being prone to a disease or condition associated with expression of MDMX. The antisense oligonucleotides may also be used as research reagents or kits, and as diagnostics, e.g. to elucidate the function of a particular gene or to distinguish between functions of various members of a biological pathway, and as prophylaxis, e.g. to prevent or delay infection, inflammation or tumor formation. AAA11781-A11945 represent antisense oligonucleotides described in the method of the invention

DR Antisense compound capable of modulating the expression of phosphoenol
 PT pyruvate carboxykinase-cytosolic, useful for preventing or delaying
 PT infection, inflammation or tumor formation.

XX Claim 1; Col 43; 64pp; English.

XX The present sequence is one of a number of antisense compounds of up to
 CC 30 nucleobases in length that are capable of inhibiting the expression of
 CC phosphoenol pyruvate carboxykinase-cytosolic (PEPCCK-cytosolic). The
 CC antisense compounds are useful for inhibiting the expression of PEPCCK-
 CC cytosolic in cells or tissues. They are commonly used as research
 CC reagents and in diagnostics, e.g. to elucidate the function of particular
 CC genes. They are also useful for distinguishing between functions of
 CC various members of a biological pathway and for research use. The
 CC antisense compounds are also useful prophylactically, e.g. to prevent or
 CC delay infection, inflammation or tumour formation. The present sequence
 CC is a chimeric phosphorothioate oligonucleotide with 2'-MOE wings and a
 CC deoxy gap

XX Preparing novel deoxynucleic alkyl thiourea oligonucleotide for use in

PT antisense therapy, by synthesizing oligonucleotides comprising backbone

PT of alkyl or alkoxy thiourea linkages in solution or on solid phase.

XX Example 7; Fig 16; 48pp; English.

XX The present sequence was used to demonstrate the ability of deoxynucleic

CC S-Methylthiouracil (DNmt) compounds to form triplexes with DNA oligomers. An

CC increase in the C content of the oligos resulted in a large decrease in

CC binding. This experiment was performed as an example of a method for

CC preparing oligonucleotides comprising a backbone of alkyl or alkoxy

CC thiourea linkages. The method is useful for preparing oligonucleotides

CC for use in antisense or antigenic therapy, to inhibit production of

CC proteins associated with genetic diseases, cardiovascular, inflammatory

CC and neurocellular diseases, and for antiviral therapy, e.g. to treat

CC human immunodeficiency virus, human-cytomegalovirus, influenza and herpes

CC infections. The compounds are also useful as diagnostic reagents to

CC detect the presence or absence of the target DNA or RNA sequences to

CC which they specifically bind and by antagonising the normal biological

CC activity of a target protein, they can be used in the manipulation of

CC tissue e.g. tissue differentiation, both in vivo and in ex vivo tissue

CC cultures. The method provides an efficient and rapid solid-phase method

CC for the synthesis of thiourea and S-methylthiouracil

XX

XX An antisense compound, useful for treating e.g. cancer, comprises

PT nucleobases targeted a region (e.g. translation termination codon region)

PT of a nucleic acid encoding human mdm2.

XX

XX Example 9; Page 18; 81pp; English.

XX

XX The present invention relates to antisense compounds, 8-30 nucleobases in

CC length targeted to the 5' untranslated region, translation termination

CC codon region, 3' untranslated region, coding region or translation start

CC site of a nucleic acid encoding human mdm2, where the antisense compound

CC modulates the expression of human mdm2. The antisense oligonucleotides of

CC the invention are useful for encoding human mdm2 and for inhibiting the

CC expression of human mdm2. They may be used for treating an animal having

CC a disease or condition associated with amplification of mdm2 gene or

CC overexpression of mdm2 e.g. a hyperproliferative disorder such as cancer

CC (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis,

CC fibrosis, atherosclerosis or restenosis, tumours, colorectal carcinoma

CC and chronic myelogenous leukemia. The antisense compound may be

CC administered with a chemotherapeutic agent to overcome drug resistance.

CC The antisense compound reduces hyperproliferation of human cells. The

CC method, which involves the use of the antisense compound, is also useful

CC for detecting the role of mdm2 expression in various cell functions and

CC physiological processes and useful in both clinical research and

CC diagnostic tools. AAS2942-AAS29507 represent the human mdm2 antisense

CC oligonucleotides of the present invention

XX PT

XX Synthesis of polynucleotide useful during fabrication of an array involves coupling nucleoside phosphoramidite and a solid-supported nucleoside and treating the product with an oxidation/deprotection composition.

XX PS

XX Example 1; Page 15; 36pp; English.

XX CC

XX The present invention relates to a method for the synthesis of a polynucleotide which involves coupling a second nucleoside to a first nucleoside through a phosphite linkage, where the second nucleoside has a non-carbonate protecting group protecting a hydroxyl, and exposing the product to a composition which concurrently oxidizes the phosphite formed to a phosphate and deprotects the protected hydroxyl of the second nucleoside. The method is useful for synthesizing the polynucleotides, for carrying out either 3' to 5' or 5' to 3' synthesis and for fabricating an addressable array of polynucleotides on a substrate. The present sequence is an oligonucleotide produced to demonstrate the method of the invention

CC each other. The invention also provides methods to detect analytes in a
 CC solution through measurement of the heat of binding or reaction generated
 CC from the interaction of the analytes with binding or reaction partners.
 CC Detection devices are provided that consist of spatially addressable
 CC arrays of thermistors, which are useful in the multiparallel thermal
 CC analysis of samples. The methods and devices are particularly in the
 CC analysis of nucleic acids, especially DNA/DNA, DNA/RNA, DNA/LNA (linear
 CC nucleic acid), DNA/siRNA (short interfering RNA) and DNA/PNA (peptide
 CC nucleic acid). The binding between the analyte and its binding partner
 CC comprises part of an enzymatic amplification reaction, especially PCR or
 CC primer extension reaction. The detection device provides a real time,
 CC digital profile of the binding or reaction between the analyte and its
 CC binding or reaction partner. An example from the invention, using the
 CC present oligonucleotide, showed that the thermal detection technique is
 CC able to distinguish between perfectly matched and mismatched DNA
 CC sequences

 PT peptide, or a CAP37 peptide monocyte derivative for treating
 PT bacterial keratitis, bacterial conjunctivitis, endophthalmitis, or
 PT blebitis.
 XX Disclosure; SEQ ID NO 12; 31pp; English.

The invention relates to treating an ocular condition in an eye of a
 CC mammal comprising administering a cationic antimicrobial protein of Mw 57
 CC kDa (CAP37), a CAP37 peptide, or a CAP37 peptide monocyte derivative
 CC to the eye of the mammal. Also included are a bactericidal or
 CC bacteriostatic contact lens (comprising a contact lens, and a coating
 CC comprising a CAP37, a CAP37 peptide, or a monocyte derivative of a
 CC CAP37 peptide disposed upon a surface of the contact lens) and a method
 CC of storing a mammalian corneal transplant comprising providing a medium
 CC comprising a bactericidal or bacteriostatic quantity of a CAP37, a CAP37
 CC peptide, or a CAP37 peptide monocyte derivative and disposing the
 CC mammalian corneal transplant in the medium. The method is useful for
 CC treating an ocular condition is bacterial keratitis caused by Pseudomonas
 CC aeruginosa or Staphylococcus aureus, bacterial conjunctivitis,
 CC endophthalmitis, or blebitis. The method is particularly useful for
 CC treating corneal ulcer or wound in an eye of a mammal, or for inhibiting
 CC bacterial infection or contamination of or by a contact lens. CAP37 and
 CC CAP37 peptides may also be used as a disinfectant for cleaning or
 CC sterilization of contact lenses, and as a storage solution for preventing
 CC contact lenses from becoming contaminated with bacteria while in storage
 CC cases. An experiment was performed to determine whether CAP37 induced
 CC ICAM-1, VCAM-1, PECAM-1, E-selectin (and control Beta actin) mRNA. The

CC present sequence is a reverse transcriptase (RT)-PCR primer used in the
 CC above assay.

The invention relates to a novel pharmaceutical composition, which has a
 CC first active agent comprising an oligonucleotide antisense to the
 CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
 CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
 CC junctions of genes encoding a polypeptide associated with lung and/or
 CC nasal airway dysfunction and a second active agent comprising an
 CC antiinflammatory steroid and ubiqunone. A composition of the invention
 CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive, or
 CC immunosuppressive, and cytostatic activity. The composition may have a
 CC use in antisense gene therapy. The composition is useful for treating or
 CC preventing a respiratory, lung or malignant disease or condition, also
 CC for enhancing the prophylactic or therapeutic respiratory effect of an
 CC antiinflammatory steroid in a subject, for reducing or depleting levels
 CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
 CC receptor, producing bronchodilation, increasing levels of ubiqunone or
 CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
 CC lung inflammation, lung allergies, or a respiratory disease or condition.
 CC Note: The sequence data for this patent is not represented in the printed

CC specification, but was obtained in electronic format directly from WIPO

PS Selecting genetic markers as targets for nucleic acid sequence
PT amplification, useful for improving genetic testing, e.g. fetal sex
PT determination, comprises selecting each of the genetic markers according
PT to a heterozygosity index.
XX
PS Claim 36; Page 40; 64pp; English.
XX
CC The invention describes a method of selecting genetic markers as targets
CC for nucleic acid sequence amplification comprising selecting each of the
CC genetic markers according to a heterozygosity index of 0.5 or greater.
CC Selecting and amplification of genetic markers are useful as targets for
CC nucleic acid sequence amplification, for genetic testing or facilitating
CC multiplex PCR amplification from limiting amounts of target nucleic acid.
CC The methods are also useful for improving genetic diagnostic and
CC screening methods, such as prenatal diagnostic testing, foetal sex
CC determination or genetic identification, e.g. DNA profiling or DNA
CC fingerprinting. The nucleic acid sequence amplification is also useful in
CC forensic analysis of degraded, old, ancient and difficult samples that
CC are difficult to amplify and identify. This sequence represents a PCR
CC primer used in the selection and amplification of genetic markers

XX
CC This invention describes a novel composition (a) a first active agent,
CC comprising oligonucleotides, effective for alleviating
CC bronchoconstriction, respiratory tract inflammation, allergies and
CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC surfactant depletion or hyposecretion, when administered to a mammal. The
CC oligonucleotides are derived from a gene encoding or regulating
CC expression of a target polypeptide associated with lung airway or lung
CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC The invention also describes a kit, that comprises: (a) a delivery
CC device, in separate containers, (b) the oligonucleotides, (c)
CC instructions for adding a carrier and for use of the kit. The composition
CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC beta-adrenergic agonist. The composition is useful for preventing or
CC treating a respiratory, lung or malignant disease. The administered
CC composition comprises oligo and is administered to reduce the production
CC or availability, or to increase the degradation of the target mRNA or to
CC reduce the amount of target polypeptide present in the lungs. The
CC pulmonary obstruction, and/or bronchoconstriction and/or lung
CC inflammation, allergies and/or surfactant hypoproduction are associated
CC with a disease or condition such as pulmonary vasoconstriction,
CC inflammation, allergies, asthma, impaired respiration, respiratory
CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC transplantation rejection, pulmonary infections, bronchitis or cancer.

CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

PT  Pharmaceutical composition for treating asthma, has antisense
PT  oligonucleotide containing less percentage of adenosine, targeted to
PT  nucleic acids associated with lung airway or lung dysfunction, and
PT  bronchodilating agent.
XX
PS  Claim 15; SEQ ID NO 13681; 763pp; English.
XX
CC  This invention describes a novel composition (a) a first active agent,
CC  comprising oligonucleotides, effective for alleviating
CC  bronchoconstriction, respiratory tract inflammation, allergies and
CC  reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
CC  surfactant depletion or hyposecretion, when administered to a mammal. The
CC  oligonucleotides are derived from a gene encoding or regulating
CC  expression of a target polypeptide associated with lung airway or lung
CC  dysfunction or cancer and can be anti-sense to the corresponding mRNA.
CC  The invention also describes a kit, that comprises: (a) a delivery
CC  device, in separate containers, (b) the oligonucleotides, (c)
CC  instructions for adding a carrier and for use of the kit. The composition
CC  of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
CC  analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
CC  beta-adrenergic agonist. The composition is useful for preventing or
CC  treating a respiratory, lung or malignant disease. The administered
CC  composition comprises oligo and is administered to reduce the production
CC  or availability, or to increase the degradation of the target mRNA or to
CC  reduce the amount of target polypeptide present in the lungs. The
CC  pulmonary obstruction, and/or bronchoconstriction and/or lung
CC  inflammation, allergies and/or surfactant hypoproduction are associated
CC  with a disease or condition such as pulmonary vasoconstriction,
CC  inflammation, allergies, asthma, impeded respiration, respiratory
CC  distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
CC  hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
CC  transplantation rejection, pulmonary infections, bronchitis or cancer.
CC  The reduced adenosine content of the anti-sense oligos corresponding to
```

CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypotension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

XX Screening for schizophrenia, useful for predicting clinical response to a
 PT compound for treating schizophrenia comprising assaying nucleic acid for
 PT a codon encoding arginine at amino acid position 241 of intercellular
 PT adhesion molecule-1.

XX PS Claim 5; SEQ ID NO 3; 34pp; English.

XX CC The present invention relates to a method for screening for

XX CC schizophrenia. The method comprises assaying a DNA sample for the

XX CC presence of a codon encoding arginine at amino acid position 241 of the

XX CC intercellular adhesion molecule-1 (ICAM-1) protein or a protein sample

XX CC for the presence of the ICAM-1 protein having the 241A polymorphism,

XX CC where the presence of a codon encoding arginine at amino acid position

XX CC 241 of the ICAM-1 protein or of the polymorphism is indicative of a

XX CC schizophrenia. The method is useful for predicting clinical response to a

XX CC therapeutic compound in the treatment of ICAM-1 mediated schizophrenia.

XX CC The present sequence is a PCR primer, which was used in an example from

XX CC the invention.

 New antisense compound, having a sequence targeted to a nucleic acid encoding mPGES-1, useful for preparing a composition for treating e.g., inflammation, Alzheimer's disease, arthritis, diabetes, cancer or ischemia.
 Claim 4; SEQ ID NO 141; 132pp; English.

The present sequence represents a chimeric antisense oligonucleotide targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The human mPGES-1 gene is located on chromosome 9, more specifically to 9q34.3. The present invention also describes: (1) antisense compounds, having a sequence comprising 8-30 bp targeted to a nucleic acid encoding mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and inhibits its expression; (2) a method of inhibiting the expression of mPGES-1 in cells or tissues; and (3) a method of treating an animal having a disease or condition associated with mPGES-1. mPGES-1 chimeric

CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulator, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

PT New antisense compound, having a sequence targeted to a nucleic acid
 PT encoding mPGES-1, useful for preparing a composition for treating e.g.,
 PT inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
 PT ischemia.
 XX
 XX
 PS Claim 4; SEQ ID NO 653; 132pp; English.
 XX
 XX The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulatory, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

 PT
 PS Claim 4; SEQ ID NO 733; 132pp; English.
 XX
 XX The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulatory, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

XX
XX Claim 4; SEQ ID NO 1423; 132pp; English.
XX
XX The present sequence represents a chimeric antisense oligonucleotide
CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC human mPGES-1 gene is located on chromosome 9, more specifically to
CC 9q34.3. The present invention also describes: (1) antisense compounds,
CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC mPGES-1, which specifically hybridize with the nucleic acid mPGES-1 and
CC inhibits its expression; (2) a method of inhibiting the expression of
CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
CC antisense oligonucleotides and antisense compounds have cytosolic,
CC antidiabetic, immunomodulatory, cardiant, neuroprotective,
CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC ophthalmological, immunomodulatory and cardiovascular activities, and can
CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC can be used for preparing a composition for treating a disease or
CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC ophthalmic, immunological, cardiovascular or neurological disorder.

XX New antisense compound, having a sequence targeted to a nucleic acid
XX encoding mPGES-1, useful for preparing a composition for treating e.g.,
XX inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
XX ischemia.
XX
XX Claim 4; SEQ ID NO 1685; 132pp; English.
XX
XX The present sequence represents a chimeric antisense oligonucleotide
XX targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
XX human mPGES-1 gene is located on chromosome 9, more specifically to
XX 9q34.3. The present invention also describes: (1) antisense compounds,
XX having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
XX mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and

CC inhibits its expression; (2) a method of inhibiting the expression of
CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
CC antisense oligonucleotides and antisense compounds have cytosolic,
CC antidiabetic, immunomodulator, cardiant, neuroprotective,
CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC ophthalmological, immunomodulatory and cardiovascular activities, and can
CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC can be used for preparing a composition for treating a disease or
CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC ophthalmic, immunological, cardiovascular or neurological disorder.

XX Human mPGES-1 chimeric antisense oligonucleotide SEQ ID NO:320.
XX

```

CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulatory, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, neurotropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

 CC The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulatory, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, neurotropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can

 XX
 CC The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

XX Typing genes that contain polymorphic microsatellite loci, useful for
 PT identifying predisposition to disease, by amplification and determining
 PT length of amplicons.
 XX Example 3; Page 27; 64pp; German.
 XX The invention describes a method of typing (M1) a gene (I) that has one

CC or more polymorphic microsatellite loci (PML). The method comprises: PCR
 CC amplification of at least one DNA region of (I) that includes PML, using
 CC as template a DNA sample containing at least one segment of (I); and
 CC determining the length of the resulting amplicon(s). Also described are:
 CC a method of determining (M2) microsatellite markers (MM) for
 CC predisposition to a disease, associated with a gene that includes one or
 CC more PML; and prediagnosis (M3) of diseases associated with gene that
 CC include PML. The method is used to identify microsatellite markers, in a
 CC disease-related gene, that are associated with a predisposition to
 CC diseases and for prediagnosis of such diseases, especially prion diseases
 CC but also cystic fibrosis, malignant hyperthermia syndrome in pigs and
 CC metabolic diseases; also to type genes that encode milk proteins,
 CC hormones or transcription factors. The method is simpler, quicker and
 CC particularly less expensive than known methods based on sequencing. This
 CC sequence represents a primer used to genotype a region of the cow prion
 CC protein (PrP) comprising a polymorphic microsatellite locus.

 from a subject.
 XX

PT regions which are associated with breast cancer in a nucleic acid sample
 PT from a subject.
 XX
 XX Example 4; Page 83; 289pp; English.
 XX
 XX The invention relates to a novel method for identifying a subject at risk
 CC of breast cancer comprising detecting the presence or absence of one or
 CC more polymorphic variations associated with breast cancer in a nucleic
 CC acid sample from a subject. The method of the invention has cytostatic
 CC applications and may be useful for identifying a subject at risk of
 CC breast cancer for early diagnosis, prevention and treatment of breast
 CC cancer, possibly via gene therapy, as well as to analyse and predict a
 CC response to a breast cancer treatment and in clinical drug trials. The
 CC current sequence is that of an Extend primer (also described as probe) of
 CC the invention which was used to genotype human intercellular adhesion
 CC molecule ICAM-1/ICAM-4/ICAM-5 gDNA. ICAM-1 (human rhinovirus receptor; BB2
 CC ;CD54;cell surface glycoprotein P3.58) has been mapped to chromosomal
 CC position 19p13.3-p13.2, ICAM-4 (Landsteiner-Wiener blood group; LW) has
 CC been mapped to chromosomal position 19p13.2-cen and ICAM-5
 CC (telencephalin) has been mapped to chromosomal position 19p13.2.

XX
CC This invention relates to a novel activated mutant protein tyrosine
CC kinases and associated methods for diagnosing cancer and screening for
CC anti-cancer agents. Protein kinases are signalling molecules involved in
CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
CC MCKK/MLK4 genes. Most were identified in the kinase domain. The invention
CC may be useful for the production of compounds with a cytosolic activity
CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
CC stimulators. The invention may be useful for developing methods for
CC detecting mutations involved in cancer or screening for anti-cancer
CC agents. The present sequence is that of a human-derived oligonucleotide
CC which is related to the invention.

XX
CC This invention relates to a novel activated mutant protein tyrosine
CC kinases and associated methods for diagnosing cancer and screening for
CC anti-cancer agents. Protein kinases are signalling molecules involved in
CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
CC MCKK/MLK4 genes. Most were identified in the kinase domain. The invention
CC may be useful for the production of compounds with a cytosolic activity
CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
CC stimulators. The invention may be useful for developing methods for
CC detecting mutations involved in cancer or screening for anti-cancer
CC agents. The present sequence is that of a human-derived oligonucleotide
CC which is related to the invention.

 XX Methods for identifying subjects who are afflicted with or carriers of
 PT diseases associated with genomic deletion(s), e.g. Van Buchem's disease,
 PT by determining the presence of a deletion in the 92 kb region of human
 PT chromosome 17 at 17q21.
 XX
 XX Example 3; Page 26; 109pp; English.
 PS
 XX The present invention relates to methods for distinguishing between
 CC individuals homozygous for and therefore afflicted with Van Buchem's
 CC disease, individuals heterozygous for and therefore carriers of Van

CC Buchem's disease and individuals who are not afflicted with Van Buchem's
CC disease comprise identifying a large genomic deletion in chromosome 17 at
CC 17q21. The method is useful for identifying individuals who are afflicted
CC with or carriers of diseases associated with one or more genomic
CC deletion, particularly Van Buchem's disease, which is a rare autosomal
CC recessive disorder that results in a bone dysplasia referred to a
CC craniofacial hypertosis. The present sequence is a PCR primer used to
CC amplify 92Kb gene fragment in human chromosome 17 at 17q21

XX New genotyping oligonucleotide, useful for detecting the presence,
PT absence or identity of single polynucleotide polymorphism in a nucleic
PT acid sample.

XX Claim 1; Page 59; 83pp; English.

XX Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
CC primer extension (SNPE) primers, and the sequences of regions flanking
CC sites of single nucleotide polymorphisms SNPs. The present invention
CC includes kits for determining the presence or absence of a SNP, using the
CC oligonucleotides of the invention. The PCR primers are used to amplify a
CC SNP flanking sequence, the SNPs primer is used as a genotyping primer.
CC The oligonucleotides are useful for genotyping a nucleic acid sample by
CC performing a single-nucleotide primer extension reaction. The
CC oligonucleotides are useful for determining the presence, absence or
CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to
CC assess by association analysis the genotype of an individual or group of
CC individuals, having a pathological phenotypic trait suspected of being
CC caused by one or more SNPs. Phenotypic traits include diseases e.g.
CC agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular

CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
CC traits also include symptoms of or susceptibility to multifactorial
CC disease of which a component is or may be genetic such as autoimmune
CC diseases, including, rheumatoid arthritis, multiple sclerosis,
CC inflammation, cancer, nervous system diseases and infection by pathogenic
CC microorganism. The method is also useful in forensic investigations and
CC paternity analysis. The present sequence represents a PCR primer specific
CC for a human SNP containing DNA sequence

XX Extracting intact cytoplasmic biomolecules e.g. proteins, nucleic acids
PT from cells, by treating sample comprising cells containing target cells
PT with permeabilizing agents to release biomolecules and recovering them.

XX Example 10; Page 59; 119pp; English.

XX The invention relates to a novel method for extracting intact cytoplasmic
CC biomolecules from cells. The method of the invention is useful for
CC extracting or acquiring cytoplasmic biomolecules such as proteins or
CC nucleic acids which include cytoplasmic RNA, nuclear and mitochondrial
CC RNA, nuclear and mitochondrial DNA, cytoplasmic mRNA, or their
CC combinations from cells. The method is useful in cancer screening,
CC selecting and monitoring for chemotherapy treatment or cancer recurrence.
CC This type of cell analysis is useful in cancer diagnostics. The method is
CC useful in profiling cells isolated from tissues or body fluids and serves
CC as an adjunct to clinical diagnosis of diverse carcinomas including early
CC stage detection and classification of circulating tumour cells. The
CC present sequence is used in the exemplification of the invention.

 XX Diagnosing severity of disease in a test subject, by mixing the sample
 PT comprising cancer cells with immunomagnetic particles and separating cell
 PT fraction to diagnose enriched fraction for the presence of cancer cells.
 XX
 XX Example 10; Page 59; 105pp; English.
 PS
 XX The invention relates to a method of diagnosing the severity of a disease
 CC in a test subject, by obtaining a sample having a mixed cell population
 CC suspected of containing cancer cells of epithelial origin, mixing the
 CC sample with immunomagnetic particles which bind specifically to the
 CC cancer cells, subjecting the mixture to produce a separated cell
 CC fraction, and assaying the enriched fraction for the presence of the
 CC cancer cells. The method is useful for diagnosing the severity of a
 CC disease in a test subject. The test subject is for assessment of a
 CC presence of circulating cancer cells. The test subject response to cancer
 CC eradication procedures and is assessed by the presence of circulating
 CC cancer cells. The test subject has been diagnosed with a cancer selected
 CC from prostate cancer, breast cancer, colon cancer apudoma, choristoma,
 CC branchioma, malignant carcinoid syndrome, carcinoid heart disease, and
 CC carcinoma e.g. Walker, basal cell, basosquamous, Brown-Pearce, ductal,
 CC Ehrlich tumor, Krebs 2, merkel cells, mucinous, and non-small cell lung.
 CC This sequence represents a primer used to amplify a specific gene cDNA
 CC sequence in the method of the invention.

 XX Chromosome-specific DNA probes free of species-specific repeat DNA - used
 PT for identification and banding of human chromosomes.
 PT
 XX Claim 65; Page 63; 73pp; English.
 PS
 XX The sequences given in AAQ25868-9 are nucleotide primers which are
 CC characterised by binding to a 5' and a 3' Alu terminus, respectively.
 CC These Alu primers were based on a current revision of consensus sequence
 CC of Alu repeats. This revision is based on nucleotide sequences of 50
 CC different, cloned and sequenced human Alu segments. Two regions on the
 CC sequence showed a high degree of conservation and these were used as
 CC candidate regions for the primer locations. In order to minimize the
 CC incorporation of Alu sequence itself in the inter-Alu-PCR, the 5' primer
 CC was designed to recognise a specific region and to direct DNA synthesis
 CC off the 5' end and away from the middle of the Alu segment to which it is
 CC bound. The converse is true for the 3' primer. Amplification using these
 CC two primers yields products ranging from a few hundred to several
 CC thousand base pairs. The primer design maximizes both the number of Alu
 CC segments recruited and the number of inter-Alu unique sequences
 CC amplified. (Updated on 25-MAR-2003 to correct PN field.)

 CC of human ICAM-1 mRNA. The same sequence was synthesised in phosphodiester
 CC and phosphorothioate forms. The oligonucleotides were tested for
 CC inhibition of ICAM-1 expression on the surface of interleukin-1-beta-
 CC stimulated cells in two different cell lines. The phosphodiester
 CC oligonucleotide did not inhibit ICAM-1 expression. The phosphorothioate
 CC (P=S) form was the most active of 5 different P=S anti-sense
 CC oligonucleotides which were tested (see AAQ22630-4). The effect of
 CC oligonucleotide length on antisense activity was tested using truncated

CC versions of the phosphorothioate form of oligonucleotide #1. In general,
 CC antisense activity decreased as the length of the oligonucleotides
 CC decreased

XX Synthesis of new oligo:nucleotide(s) with chiral inter-sugar links - by
PT nucleophilic substitution or polymerase catalysed primer extension,
PT useful in anti-sense therapy for controlling protein expression.

XX Disclosure; Page 91; 114pp; English.

XX The invention describes oligonucleotides with chiral inter-sugar links
CC (Sp or Rp). Various therapeutic areas can be targeted with these
CC antisense oligomers to inhibit RNA translation in vivo. For example, the
CC sequence shown is a target region of the ICAM-I proto- oncogene. An
CC antisense oligomer to this target sequence may be used to diagnose and
CC treat diseases caused by the proto oncogene. See also AAQ41482-91.

XX New modified oligo-nucleotide contg guanine quartet - inhibits activity
PT of viruses, e.g. HIV, and phospholipase A2 and modulates telomere length

PT	of chromosomes.
XX	
PS	Disclosure; Page 108; 144pp; English.
XX	
CC	The sequences given in AAQ61990-2001 are oligonucleotides which contain
CC	G4 or G3 stretches and which may be used for inhibiting replication of
CC	herpes simplex virus (HSV), activity of HIV, human cytomegalovirus or
CC	influenza virus, or for treating inflammatory and neurological disorders
CC	caused by phospholipase A2 activity in cases of hyper- proliferation,
CC	maligancy, cardiovascular disease and snake bite. Oligonucleotides such
CC	as these, may be used for inhibiting division of malignant cells by
CC	modulating telomere length, which may also retard aging. (Updated on 25-
CC	MAR-2003 to correct PN field.)

XX
XX Antisense oligonucleotides which target human ICAM-1 were synthesised in
CC both the phosphodiester and phosphorothioate forms. The oligonucleotides
CC are useful to treat diseases which are modulated by changes in
CC intercellular adhesion molecules. The sequence AAQ44512 corresponds to
CC the region around the AUG codon (84-81) of the human ICAM-1 coding
CC sequence; sequence AAQ44566 is complementary to this antisense
CC oligonucleotide and was used to show that the inhibition of ICAM-1
CC expression by the phosphorothioate form of AAQ44512 was due to antisense
CC effects. (Updated on 25-MAR-2003 to correct PN field.)

PT

PT

XX

PS Claim 2; Page 35; 57pp; English.

XX

XX New oligomers are claimed which (A) have at least one peptide nucleic acid (PNA) subunit and (B) have a sequence hybridisable to AUG region, coding region, 5'-untranslated region or 3'-untranslated region of ICAM-1 or ELAM-1, or hybridisable to AUG region, coding region, 5'- untranslated region, exon/intron junction region or 3'-untranslated region of VCAM-1. The PNAs can be used to target RNA and single stranded DNA (ssDNA) to produce antisense-type gene regulation moieties. Hence they may be used therapeutically for modulating cellular adhesion and thus as antimetastatic agents, anticancer agents, antirhinoviral agents, anti-

CC AIDS agents and antiinflammatory agents. They may also be useful as diagnostics, e.g. as probes for specific mRNAs. PNA oligomers have high affinity for complementary single stranded DNA. They are also able to form triple helices in which a first PNA strand binds with RNA or ssDNA and a second PNA strand binds with the resulting double helix or with the first PNA strand. The PNAs possess no significant charge and are water soluble, which facilitates cellular uptake. Further, since they contain amides of non-biological amino acids, they are biostable and resistant to enzymatic degradation by proteases. The present sequence targets human intercellular adhesion molecule-1 (ICAM-1) translation initiation codon (AUG) region

CC AAT30211-T30233, AAT33058-T33112 and AAT36667-T36684 represent antisense
CC oligonucleotides of the invention. These sequences target regions of the
CC coding sequences for human intercellular adhesion molecule-1 (ICAM-1),
CC endothelial leukocyte adhesion molecule-1 (ELAM-1, also known as E-
CC selectin), or vascular cell adhesion molecule-1 (VCAM-1). ICAM-1,
CC and VCAM-1 represent three of the five cell adhesion molecules involved
CC in the adherence of white blood cells to vascular endothelium. These
CC sequences can be used in a composition for treating allograft rejection.
CC The composition contains one of these sequences in combination with an
CC immunosuppressive agent. The immunosuppressive agent used in the
CC compositions is brequinar, rapamycin, anti-lymphocyte serum, a monoclonal
CC antibody against LFA-1 or an antisense oligonucleotide. The compositions
CC can be used for treating or preventing allograft rejection, such as
CC cardiac or renal allograft rejection. By using these compositions,
CC allograft survival times are extended, and donor-specific transplant
CC tolerance is induced

 PT -nucleic acid which is specifically hybridisable with a 5' cap region of
 PT the target mRNA.
 XX
 XX Disclosure; Page 17; 57pp; English.
 PS
 XX The present sequence represents a modified oligonucleotide. The invention

CC relates to a method for inhibiting the translation of a capped target
 CC mRNA, which comprises contacting the capped target mRNA with an oligomer
 CC which: (1) is 8-25 bases in length; (2) is an oligonucleotide having a
 CC modified 2'-position, an oligonucleoside, or a peptide-nucleic acid; and
 CC (3) is specifically hybridisable with a 5' cap region of the target mRNA
 CC which includes at least one of the first 20 nucleotides at the 5'
 CC terminus of the target mRNA. The oligomer interferes with ribosome
 CC assembly on the mRNA. The method is particularly useful for inhibiting
 CC the translation of capped target mRNA encoding human ICAM-1, human E-
 CC selectin or a cytomegalovirus protein (preferably an IE1 or IE2 gene
 CC product). Elevated ICAM-1 levels are associated with rheumatoid
 CC arthritis, ulcerative colitis, Crohn's disease, psoriasis and renal
 CC transplant rejection. E-selectin (also known as endothelial leukocyte
 CC adhesion molecule-1, or ELAM-1) is involved in the adherence of white
 CC blood cells to vasculature endothelium and subsequent migration out of
 CC the vasculature. Antisense drugs targeted to cytomegalovirus IE2 mRNA may
 CC be effective against CMV retinitis in AIDS patients

XX New oligo-nucleotide(s) for e.g. testing anti-sense activity - comprise
 PT non-naturally occurring nucleoside unit and chiral phosphate linkages.
 PT Disclosure; Col 12; 18pp; English.

XX This sequence is used as a target sequence for a novel method to test for

CC antisense activity using an oligonucleotide comprising nucleoside units

CC linked via phosphate linkages in which at least one of the nucleoside
 CC units is a non-naturally occurring nucleoside unit and at least two of
 CC the nucleoside units are linked via chiral phosphate linkages. The
 CC oligonucleotides can be used to test for antisense activity using
 CC reporter genes in assays and to test antisense activity against selected
 CC cellular target mRNA's in cultured cells. Some of the oligonucleotides
 CC are useful for to elicit RNase H activity as a termination event or to
 CC increase nuclease resistance. The oligonucleotides are expected to
 CC exhibit one or more properties such as hybridisation with target RNA's
 CC and DNA's, cellular absorption, transport, or to improve enzymatic
 CC interaction without diminishing existing properties giving improved,
 CC drugs, diagnostics and research agents. (Updated on 17-OCT-2003 to
 CC standardise OS field)

 XX New intercellular adhesion molecule receptor (ICAM-R) specific antibodies
 PT - useful for modulating ligand/receptor binding and biological activities
 PT involving ICAM-R, especially those of the specific and non-specific
 PT immune systems.
 XX
 XX Example 4; Col 14; 108pp; English.
 XX
 XX This sequence is a primer for an ICAM immunoglobulin-like loop domain.
 CC The invention relates to antibodies (Ab) which bind specifically to the
 CC intercellular adhesion molecule receptor (ICAM-R), inhibiting the
 CC interaction between ICAM-R and alpha d/CD18. Abs with specific ICAM-R
 CC binding are useful in compositions for immunisation, and for purifying
 CC ICAM-R polypeptides and identifying cells expressing ICAM-R on their cell
 CC surface, modulating ligand/receptor binding and biological activities
 CC involving ICAM-R, especially inflammatory responses of the specific
 CC immune system, the non-specific immune system, monitoring and treating
 CC asthma, tumour growth, and/or metastasis, and viral infection (e.g. HIV
 CC infection). In particular diseases involving an essential T cell
 CC activation (e.g. asthma, psoriasis, diabetes, graft vs. host disease,
 CC tissue transplant rejection, and multiple sclerosis) may be treated with
 CC anti-ICAM-R antibodies. The Abs specifically bind to and identify ICAM-R
 CC and disrupt ICAM-R to cell adhesion molecule, especially alpha d/CD18
 CC binding

 PT intercellular adhesion molecule polypeptide.
 PT
 XX Example 4; Col 117-118; 122pp; English.
 XX
 XX This invention describes a novel method for identifying a compound that
 CC modulates phosphorylation of human intercellular adhesion molecule
 CC polypeptide (ICAM-R) by protein kinase C isoform. The method comprises:
 CC (a) exposing a purified peptide consisting of the cytoplasmic domain of
 CC ICAM-R to protein kinase C isoform and labeled adenosine triphosphate in
 CC the presence and absence of a test compound; (b) measuring labeled
 CC phosphate transferred to the peptide; and (c) identifying a test compound
 CC that affects transfer of the labeled phosphate as a modulator compound.
 CC The method is useful for identifying compounds that modulate the
 CC phosphorylation of human intercellular adhesion molecule polypeptide
 CC which might form the basis for the development of therapeutic and
 CC diagnostic agents. This sequence represents a probe used in the method of
 CC the invention

XX PS Hybrid fusion proteins comprising intercellular adhesion molecule or its

XX PT variants useful, for treating inflammatory conditions, Crohn's disease,
 XX PT atherosclerosis and diabetes.

XX PS Example 4; Col 14; 109pp; English.

XX CC This invention relates to a hybrid fusion protein comprising an
 CC intercellular adhesion molecule (ICAM-R) amino acid fragment at its amino
 CC terminus and a constant domain of an immunoglobulin heavy chain at its
 CC carboxy terminus. ICAM-R polypeptides are useful for treating and
 CC monitoring inflammatory conditions such as adult respiratory distress
 CC syndrome, multiple organ injury syndrome secondary to septicemia or
 CC trauma, reperfusion injury of tissue, acute glomerulonephritis, reactive
 CC arthritis, dermatosis, stroke, thermal injury, haemodialysis,
 CC leukapheresis, ulcerative colitis, Crohn's disease, necrotising
 CC enterocolitis, granulocyte transfusion associated syndrome,
 CC atherosclerosis and cytokine induced toxicity. ICAM-R polypeptides are
 CC also useful for treating conditions resulting from a response of the
 CC specific immune system in a mammal e.g. psoriasis, organ/tissue
 CC transplant rejection and autoimmune diseases including Raynaud's
 CC arthritis, diabetes and lupus erythematosus. ICAM-R products and ICAM-R
 CC related products are also useful in monitoring and treating asthma,
 CC tumour growth and/or metastasis, and viral infection (e.g. HIV
 CC infection). Sequences AAA97090 and AAB13036 represent the human ICAM-R
 CC DNA and protein sequences. Sequences AAA97091-A97112 represent ICAM-R DNA
 CC fragments, PCR primers and probes, all used in the identification of the
 CC ICAM-R DNA sequence. AAA97113-A97123 and AAA97129-A97152 represent
 CC primers used in the production of humanised anti-ICAM-R antibody ICR-8.1,
 CC and fragments of the humanised antibody. Sequences AAA97124-A97128,
 CC AAA97132, AAA97144 represent ICR-8.1 sequences. Sequences AAA97153-A97176
 CC excluding AAA97155-A97156 represent primers used in the production of
 CC humanised anti-ICAM-R antibody ICR-1.1, and fragments of the humanised
 CC antibody. Sequences AAA97155-A97156 and AAB13047-B13048 represent murine
 CC ICR-1.1 sequences. DNA and peptide sequences used in the production of
 CC the chimeric protein of the invention include AAA97177-A97188 and
 CC AAB13050-B13051

XX PT rheumatoid arthritis, diabetes, multiple sclerosis, asthma and viral

XX PT infection.

XX XX

XX XX Example 4; Col 14; 117pp; English.

XX XX

XX CC The present invention describes a monoclonal antibody (Mab) (I), produced

XX CC by the hybridoma cell line 81K2F (ATCC HB 11692). Also described are: (i)

XX CC a hybridoma cell line 81K2F; and (2) a Mab (II), that competes with (I)

XX CC for binding to ICAM-R (intracellular adhesion molecule receptor) (III).

XX CC (II) mimics the activity of natural binding proteins through which

XX CC intercellular and intracellular activities of (III) are modulated. (II)

XX CC is also used for modulating the immune responses. (I) is used for

XX CC immunisation as well as for purifying (III). They are also useful in

XX CC modulating the ligand/receptor binding biological activity involving

XX CC (III) especially those effector functions of (III) involved in specific

XX CC and non-specific immune system responses. Inflammatory conditions which

XX CC may be treated or monitored with related products of (III) include

XX CC conditions resulting from a response of the non-specific immune system in

XX CC a mammal e.g. adult respiratory distress syndrome, multiple organ injury

XX CC syndrome secondary to septicemia or trauma, reperfusion injury of tissue,

XX CC acute glomerulonephritis, reactive arthritis, stroke, ulcerative colitis

XX CC and atherosclerosis, and conditions resulting from a response of the

XX CC specific immune system in a mammal, e.g. psoriasis, organ/tissue

XX CC transplantation rejection, autoimmune diseases such as autoimmune

XX CC thyroiditis, multiple sclerosis, rheumatoid arthritis, diabetes and lupus

XX CC erythematosus. AAA08236 to AAA08334, and AAA82435 to AAA82451 represent

XX CC sequences used in the exemplification of the present invention

 XX CC This sequence is an antisense oligonucleotide of the invention. The
 CC antisense oligonucleotides are targeted to a nucleic acid encoding a
 CC cellular adhesion molecule (CAM) and is capable of modulating the
 CC expression of the CAM. They particularly inhibit intercellular adhesion
 CC molecule-1 (ICAM-1), vascular cell adhesion molecule-1 (VCAM-1), or
 CC endothelial leukocyte adhesion molecule-1 (ELAM-1). The antisense
 CC oligonucleotides can be used to modulate CAM activity in mediating
 CC cell-cell interactions and subsequent cellular and biological responses,
 CC e.g. T cell activation, leukocyte transmigration and inflammation. The
 CC antisense sequences can be used for modulating the synthesis of a CAM.
 CC They can be used for treating an animal suspected of having or being
 CC prone to a disease or condition associated with a CAM. Oligonucleotides
 CC targeted to ICAM-1 can be used for treating an inflammatory disease or
 CC condition e.g. inflammatory bowel disease such as Crohn's disease,
 CC colitis or ulcerative colitis, a condition of the skin, e.g. psoriasis or
 CC cytotoxic dermatitis, rheumatoid arthritis, allograft rejection, cancer,
 CC pneumonia, multiple sclerosis or a viral infection. The ICAM-1 sequences
 CC can also be used for reducing corticosteroid use in a patient or for
 CC reducing cyclosporine use in a patient. The oligonucleotides can also be
 CC used for detection and diagnosis. They can also be used for treating e.g.
 CC hyperproliferative disorders, tumours, diapedesis, graft versus host
 CC disease, arthritis, infections, autoimmune disorders, e.g. autoimmune
 CC thyroid disorders, autoimmune forms of arthritis, multiple sclerosis,
 CC some forms of juvenile diabetes mellitus, myasthenia gravis, pemphigus
 CC vulgaris, systemic lupus erythematosus, cardiovascular disorders,
 CC myocardial ischaemia/reperfusion injury, dilated cardiomyopathy, acute
 CC myocarditis, ischaemic heart disease or stroke

 CC endothelial leukocyte adhesion molecule-1 (ELAM-1). The antisense
 CC oligonucleotides can be used to modulate CAM activity in mediating
 CC cell:cell interactions and subsequent cellular and biological responses,
 CC e.g. T cell activation, leukocyte transmigration and inflammation. The
 CC antisense sequences can be used for modulating the synthesis of a CAM.
 CC They can be used for treating an animal suspected of having or being
 CC prone to a disease or condition associated with a CAM. Oligonucleotides
 CC targeted to ICAM-1 can be used for treating an inflammatory disease or
 CC condition e.g. inflammatory bowel disease such as Crohn's disease,
 CC colitis or ulcerative colitis, a condition of the skin, e.g. psoriasis or
 CC cytotoxic dermatitis, rheumatoid arthritis, allograft rejection, cancer,
 CC pneumonia, multiple sclerosis or a viral infection. The ICAM-1 sequences
 CC can also be used for reducing corticosteroid use in a patient or for
 CC reducing cyclosporine use in a patient. The oligonucleotides can also be
 CC used for detection and diagnosis. They can also be used for treating e.g.
 CC hyperproliferative disorders, tumours, diapedesis, graft versus host
 CC disease, arthritis, infections, autoimmune disorders, e.g. autoimmune
 CC thyroid disorders, autoimmune forms of arthritis, multiple sclerosis,
 CC some forms of juvenile diabetes mellitus, myasthenia gravis, pemphigus
 CC vulgaris, systemic lupus erythematosus, cardiovascular disorders,
 CC myocardial ischaemia/reperfusion injury, dilated cardiomyopathy, acute
 CC myocarditis, ischaemic heart disease or stroke

 XX New antisense oligonucleotides, used for treating e.g. inflammatory
 PT conditions, psoriasis, graft rejection, cancers, infections,
 PT cardiovascular disorders or autoimmune disorders.
 XX
 XX Claim 5; Page 191; 199pp; English.
 XX This sequence is an antisense oligonucleotide of the invention. The
 CC antisense oligonucleotides are targeted to a nucleic acid encoding a
 CC cellular adhesion molecule (CAM) and is capable of modulating the
 CC expression of the CAM. They particularly inhibit intercellular adhesion
 CC molecule-1 (ICAM-1), vascular cell adhesion molecule-1 (VCAM-1), or
 CC endothelial leukocyte adhesion molecule-1 (ELAM-1). The antisense
 CC oligonucleotides can be used to modulate CAM activity in mediating
 CC cell:cell interactions and subsequent cellular and biological responses,
 CC e.g. T cell activation, leukocyte transmigration and inflammation. The
 CC antisense sequences can be used for modulating the synthesis of a CAM.
 CC They can be used for treating an animal suspected of having or being
 CC prone to a disease or condition associated with a CAM. Oligonucleotides
 CC targeted to ICAM-1 can be used for treating an inflammatory disease or
 CC condition e.g. inflammatory bowel disease such as Crohn's disease,
 CC colitis or ulcerative colitis, a condition of the skin, e.g. psoriasis or
 CC cytotoxic dermatitis, rheumatoid arthritis, allograft rejection, cancer,
 CC pneumonia, multiple sclerosis or a viral infection. The ICAM-1 sequences
 CC can also be used for reducing corticosteroid use in a patient or for
 CC reducing cyclosporine use in a patient. The oligonucleotides can also be
 CC used for detection and diagnosis. They can also be used for treating e.g.
 CC hyperproliferative disorders, tumours, diapedesis, graft versus host
 CC disease, arthritis, infections, autoimmune disorders, e.g. autoimmune
 CC thyroid disorders, autoimmune forms of arthritis, multiple sclerosis,
 CC some forms of juvenile diabetes mellitus, myasthenia gravis, pemphigus
 CC vulgaris, systemic lupus erythematosus, cardiovascular disorders,
 CC myocardial ischaemia/reperfusion injury, dilated cardiomyopathy, acute
 CC myocarditis, ischaemic heart disease or stroke

 XX
 CC The present invention relates to an oligonucleotide array comprising
 CC oligonucleotide tags fixed to a solid substrate. The oligonucleotide
 CC array is useful for genotyping a nucleic acid sample at one or more loci
 CC via single base extension (SBE) reactions. A pair of primers is used to
 CC amplify a polymorphic locus in a sample e.g. a single nucleotide
 CC polymorphism (SNP). The present sequence is one of the primers used in
 CC the method of the present invention to amplify a polymorphic sample. The
 CC amplified nucleic acid product is then used as a template in a SBE
 CC reaction with an extension primer. The SBE reaction products are used to
 CC form the oligonucleotide array

PT Identifying oligonucleotides hybridizing to nucleic acids containing

PT

PT secondary structure, useful in clinical diagnosis, comprises identifying

PT

PT primers that interact with the target to form an extension product under

PT

PT amplification conditions.

XX

PS Example 17; Page 382; 409pp; English.

XX

CC The present invention describes a method for identifying oligonucleotides

CC

CC with desired hybridisation properties to nucleic acid targets containing

CC

CC secondary structure. The method comprises amplifying a target nucleic

CC

CC acid having at least one accessible and one inaccessible site. Primers

CC

CC that form an extension product are identified as the oligonucleotides

CC

CC which can interact with the folded target nucleic acid. Oligonucleotides

CC

CC from the present invention can be used in novel detection methods for

CC

CC clinical diagnostic purposes, including the detection and identification

CC

CC of pathogenic organisms (e.g. HIV). The method allows the ability to

CC

CC rapidly analyse nucleic acid structures. ABL46034 to ABL46367 represent

CC

CC sequences used in the exemplification of the present invention

XX New derivatized oligonucleotide, useful for effecting cellular uptake,
 PT comprises several linked nucleosides bearing a substituent such as
 PT steroid/reporter molecule, reporter enzyme or peptide.

XX Example 32; Page 19; 23pp; English.

XX The invention relates to a derivatised oligonucleotide comprising several
 CC linked nucleosides having a functionalised nucleoside bearing a
 CC substituent such as steroid/reporter molecule, non-aromatic lipophilic
 CC molecule, reporter enzyme, peptide, protein, water/lipid soluble vitamin,
 CC RNA cleaving complex, metal chelator, porphyrin, alkylator, hybrid photo-
 CC nuclease/intercalator or aryl azide photo-crosslinking agent. The
 CC oligonucleotide is useful for effecting cellular uptake of the
 CC oligonucleotide by contacting an organism with the oligonucleotide. The
 CC oligonucleotide is useful in research and diagnostic methods, for
 CC assaying bodily states in animals, especially disease states, or for
 CC treatment of diseases through modulation of the activity of DNA or RNA.
 CC The oligonucleotide has improved transfer across cellular membranes and
 CC uptake properties. The effect of conjugation of an oligonucleotide with
 CC folic acid was determined by the inhibition of intercellular cell
 CC adhesion molecule-I (ICAM-I). The present sequence represents the ICAM-1
 CC specific antisense oligonucleotide

 CC members of the VR family that are involved in pain perception, in
 CC particular, TRPV3 (previously known as VR3, VRX, VR4 & TRPV7), TRPV4
 CC (previously known as VRL3 & OTRPC4) and TRPM8 (previously known as TRPX).
 CC Furthermore, this invention includes trkA+ pain specific genes expressed
 CC in the sensory neurons of the dorsal root ganglia. Accordingly, such
 CC compositions can be useful for the diagnosis, treatment and prevention of
 CC pain, inflammation, skin disorders and cancer, and so exhibit analgesic,
 CC antiinflammatory, dermatological and cytostatic activities. This
 CC oligonucleotide sequence is a PCR primer used to amplify the murine TRPV3
 CC DNA of the invention.

 XX Example 4; SEQ ID NO 21; 127pp; English.
 PS
 XX
 XX The invention relates to a hybridoma cell line ATCC HB 12190 producing a
 CC monoclonal antibody against human intercellular adhesion molecule
 CC polypeptide (ICAM-R). Also included are a monoclonal antibody produced by
 CC the hybridoma cell line, identification of a compound that modulates the
 CC interaction of binding partners intercellular adhesion molecule
 CC polypeptide (ICAM-R) and CD11b (involving: immobilising ICAM-R or CD11b,
 CC detectably labelling the non-immobilised binding partner, contacting the
 CC immobilised binding partner with the labelled binding partner in the
 CC presence and absence of test compound, detecting the label bound to the
 CC immobilised binding partner and identifying a modulating compound as a
 CC test compound that affects the label bound in the presence of the test
 CC compound in comparison to the label bound in the absence of the test
 CC compound) and identification of a compound that modulates phosphorylation
 CC of ICAM-R by protein kinase C isoform (involving: exposing ICAM-R peptide
 CC comprising amino acids 482-518 of ADG25651 to protein kinase C isoform
 CC and labelled phosphate in the presence and absence of a test compound,
 CC measuring labelled phosphate transferred to the ICAM-R peptide and
 CC identifying a test compound that affects transfer of the labelled
 CC phosphate as a modulator compound). The hybridoma cell line ATCC HB 12190
 CC is useful in the production of monoclonal antibodies useful for
 CC identifying compounds and for the treatment of conditions resulting from
 CC a response of the nonspecific immune system in a mammal (e.g. adult
 CC respiratory distress syndrome, multiple organ injury syndrome secondary
 CC to septicemia, multiple organ injury syndrome secondary to trauma,
 CC reperfusion injury of tissue, acute glomerulonephritis, reactive
 CC arthritis, dermatosis with acute inflammatory components, stroke, thermal
 CC injury, haemodialysis, leukapheresis, ulcerative colitis, Crohn's
 CC disease, necrotising enterocolitis, granulocyte transfusion associated
 CC syndrome, atherosclerosis and cytokine-induced toxicity) and conditions
 CC resulting from a response of the specific immune system in a mammal (e.g.
 CC psoriasis, organ/tissue transplant rejection and autoimmune diseases
 CC including Raynaud's syndrome, autoimmune thyroiditis, experimental
 CC autoimmune encephalomyelitis (EAE), multiple sclerosis, rheumatoid
 CC arthritis, diabetes or lupus erythematosus), asthma, tumour growth and/or
 CC metastasis and viral infection (e.g. HIV infection). The monoclonal
 CC antibodies are readily available using immunogens comprising cells
 CC naturally expressing intercellular adhesion molecule polypeptide (ICAM-R)
 CC or its variants and display ligand/receptor binding biological activities
 CC and/or immunological properties specific to ICAM-R. The present sequence
 CC is a primer or probe used in the isolation of nucleic acids encoding

```

XX New isolated nucleic acid molecule comprises at least 8 contiguous
PT nucleotides where one of the nucleotides is a single nucleotide
PT polymorphism (SNP), useful for diagnosing or treating autoimmune
PT diseases, e.g. rheumatoid arthritis.
XX Claim 21; SEQ ID NO 6669; 123pp; English.
XX The invention comprises amino acid and coding sequences containing
CC genetic polymorphisms associated with an altered risk of developing an
CC autoimmune disease (e.g. rheumatoid arthritis). The invention further
CC comprises a method of identifying an individual that has an altered risk
CC of developing an autoimmune disease, comprising detecting a single
CC nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA
CC and protein sequences of the invention are useful for diagnosing and
CC treating autoimmune diseases, such as: rheumatoid arthritis, type 1
CC diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory
CC bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious
CC anaemia, asthma, vitiligo, glomerulonephritis, Grave's disease, the
CC myocarditis, Sjogren's disease, or primary systemic vasculitis. The
CC present DNA sequence represents a human autoimmune disease-related PCR
CC primer of the invention. NOTE: The present sequence is not shown in the
CC specification, but has been retrieved from the WIPO website.

PS

XX The present sequence represents target oligonucleotide ISIS 2302. The
 CC method of the invention was used to purify this oligonucleotide. The
 CC specification describes a matrix that comprises a support and an affinity
 CC unit that specifically and reversibly binds a target oligonucleotide, and
 CC comprises a sequence of bases having the reverse complement of a
 CC hybridising portion of the target oligonucleotide. The matrix is used for
 CC affinity purification of synthetic oligonucleotides, specifically
 CC antisense agents, for treatment of hyperproliferative diseases, for
 CC treating a non-pathogen, non-hyperproliferative disease, e.g.
 CC Alzheimer's, for modulating expression of cell surface proteins, and to
 CC inhibit a eukaryotic pathogen, retrovirus or other viruses

 PT Aminoxy-modified nucleosides and oligonucleotides useful in diagnostic,
 PT therapeutic and research reagents and for modulating the expression of
 PT protein in organisms.
 XX
 PS Example 101; Page 193; 195pp; English.
 XX

The invention relates to aminoxy-modified nucleosides and
 CC oligonucleotides and to oligonucleotides that elicit RNase H for cleavage
 CC in a complementary nucleic acid strand. It also relates to
 CC oligonucleotides wherein at least some of the nucleotides are
 CC functionalised to be nuclease resistant, at least some of the nucleotides
 CC include a substituent that potentiates hybridisation of the

CC oligonucleotide to a complementary strand, and at least some of the
 CC nucleotides include a 2'-deoxy-erythro-pentofuranosyl sugar moiety. The
 CC inclusion of one or more aminoxy moieties in such oligonucleotides
 CC provides for improved binding of such oligonucleotides to a complementary
 CC strand. The oligonucleotides of the invention are used as diagnostic,
 CC therapeutic or research reagents, and can be used to modulate gene
 CC expression in organisms. The oligonucleotides containing the modified
 CC nucleosides have increased nuclease resistance and increased binding
 CC affinity to a complementary strand. The present sequence represents a
 CC uniformly modified dimethylaminoxyethyl (DMAOE) antisense
 CC oligonucleotide, targeted against the ICAM-1 gene, which was used in an
 CC exemplification of the present invention

 XX PT Determining a genotype associated with increased or decreased resistance
 PT to familial bipolar affective disorder in a family comprises determining
 PT the genotype of e.g., chromosomal regions D4S402 and D4S424.
 XX XX
 XX PS Disclosure; Page 11; 79pp; English.
 XX XX
 XX CC The present invention relates to a method of determining a genotype
 CC associated with increased or decreased resistance to familial bipolar
 CC affective disorder. The method comprises determining the genotype with at
 CC least one marker of at least one chromosomal region linked to a locus
 CC associated with resistance to bipolar affective disorder, where the
 CC chromosomal regions are included of and localised between D4S402 and
 CC D4S424, D4S431 and D4S404, or D11S394 and D11S29. The invention also
 CC discloses a kit for determining a genotype associated with increased or
 CC decreased resistance to familial bipolar affective disorder, where the
 CC kit comprises markers for two or more of the chromosomal regions cited.
 CC The method and kit are useful for determining a genotype associated with
 CC increased or decreased resistance to familial bipolar affective disorder
 CC in a family affected by bipolar affective disorder, for determining the
 CC contribution of these chromosomal regions to bipolar affective disorder
 CC in an affective family member, and for assessing an increased or
 CC decreased risk of developing bipolar illness for a tested individual from
 CC an affected family. ACA58053-ACA58292 represent primers used in the
 CC present invention

XX
XX The invention relates to human POLYX polypeptides and the polynucleotides
CC encoding them. The invention also relates to an antibody that
CC immunospecifically binds to a POLYX polypeptide, a method of determining
CC the presence or amount of a POLYX polynucleotide in a sample involving
CC contacting the sample with a probe that binds to the polynucleotide and
CC determining the presence or amount of the probe bound to the DNA, a
CC method of identifying an agent that modulates the expression or activity
CC of a POLYX polypeptide involving providing a cell expressing the
CC polypeptide, contacting the cell with the agent and determining whether
CC the agent modulates expression or activity of the polypeptide where an
CC alteration in expression or activity of the polypeptide indicates a
CC modulation, and a method of modulating the activity of a polypeptide
CC involving contacting a cell sample expressing the polypeptide with a
CC compound that binds to the polypeptide in an amount sufficient to
CC modulate the activity. The POLYX polynucleotides are useful for
CC determining the presence of or predisposition to a disease associated
CC with altered levels of POLYX DNA or protein in a first mammalian subject,
CC involving measuring the level of expression of DNA or the amount of
CC protein in a sample from the first mammalian subject and comparing the
CC amount of DNA or protein in a sample from a second mammalian subject
CC known not to have or not be predisposed to the disease, where an
CC alteration in the expression level of DNA or protein in the first subject
CC as compared to the control sample indicates the presence of a
CC predisposition to the disease. The sequences of the invention are useful
CC for treating or preventing a POLYX-associated disorder which involves
CC administering POLYX DNA. A therapeutic such as a POLYX DNA, protein or
CC antibody is useful in the manufacture of a medicament for treating a
CC syndrome associated with a human disease. This sequence represents a PCR
CC primer used to amplify a human POLYX polynucleotide of the invention.

XX Targeting an antisense oligonucleotide to hepatic tissues to modulate the
PT expression of a gene in the liver involves conjugating the
PT oligonucleotide to a cholesteryl moiety and administering the conjugate.
XX
XX Example 7; SEQ ID NO 23; 64pp; English.
XX
XX The invention relates to a method of targeting an antisense
CC oligonucleotide to hepatic tissues involving conjugating the
CC oligonucleotide to a cholesteryl moiety and administering the conjugate.
CC The method is useful for targeting an antisense oligonucleotide to
CC hepatic tissues to modulate the expression of a gene in the liver. The
CC oligonucleotide is useful in diagnostics, therapeutics, as research
CC reagents and kits, in pharmaceutical composition and for treating
CC diseases produced by undesired production of proteins. The method
CC provides lipophilic oligonucleotide conjugates with improved biostability
CC and altered biodistribution in mammals. The present sequence represents a
CC modified oligonucleotide used for NMR analysis.

XX New antisense oligonucleotides targeted to nucleic acids encoding
PT inhibitor-kappa B-R, useful for diagnosing or treating diseases
PT associated with expression of inhibitor-kappa B-R, e.g., a heightened
PT immune response or infection.
XX
XX Claim 3; Page 74; 108pp; English.
XX
CC The invention relates to antisense compounds targetted to a nucleic acid
CC molecule encoding human inhibitor-kappa B-R (also known as I-kappaBR,
CC IKBR, I-kappa-B-related, ikappab r, nuclear factor of kappa light
CC polypeptides gene enhancer in B-cells inhibitor-like 2 and NFKBIL2) to
CC inhibit its expression. Antisense compounds of the invention are useful
CC for treating diseases or conditions associated with the expression of
CC inhibitor-kappa B-R such as a heightened immune response involving
CC increased cytokine expression, or a result of infection (e.g. bacterial,
CC viral or parasitic). They are useful for diagnostics, therapeutics,
CC prophylaxis e.g. to prevent or delay infection, inflammation or tumour
CC formation, as research reagents and kits and in distinguishing between
CC functions of various members of a biological pathway. They are also
CC useful in antisense therapy. The present sequence is an oligonucleotide
CC targetted to human inhibitor-kappa B-R DNA

PS Claim 4; SEQ ID NO 1629; 132pp; English.

XX
 CC The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulator, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

 DR New oligomeric compound conjugated to an arylpropionic acid optionally
 XX of an oligonucleotide in serum.
 PS Example 26; SEQ ID NO 2; 42pp; English.
 XX The invention describes an oligomeric compound conjugated to an
 CC arylpropionic acid that optionally interacts with a plasma protein. The
 CC arylpropionic acid is ibuprofen, suprofen, fenbufen, ketoprofen, (S)-(-)-
 CC pranoprofen, or carprofen (preferably ibuprofen). Also described is a
 CC method for increasing the concentration of an oligonucleotide in serum or
 CC promoting cellular uptake of an oligonucleotide in a cell involving:
 CC selecting an arylpropionic acid that is known to bind to a plasma protein
 CC or cell surface integrin; conjugating the arylpropionic acid to the
 CC oligonucleotide to form a conjugated oligonucleotide; and adding the
 CC conjugated oligonucleotide to the serum or exposing the cell to the
 CC conjugated oligonucleotide. The compound is also useful in diagnostic
 CC applications as well as therapeutic applications and for the treatment of
 CC latent Epstein-Barr virus (EBV) infection. The ligand-conjugated
 CC oligomeric compounds increase the concentration of an oligonucleotide in
 CC serum; increase the capacity of serum for an oligonucleotide; increase
 CC the binding of an oligonucleotide to a portion of the vascular system;
 CC promote cellular uptake of an oligonucleotide in cells; bind to protein
 CC molecules and possess enhanced pharmacokinetic properties. The ligand
 CC conjugated oligomeric compounds are capable of interacting with a protein
 CC or are conjugated to drug moieties. The oligomeric compounds can be
 CC prepared having covalently attached ligands that bind reversibly to at
 CC least one serum, vascular or cellular proteins. This reversible binding
 CC is expected to decrease urinary excretion, increase serum half life and
 CC greatly increase the distribution of oligomeric compounds thus
 CC conjugated. The compounds enhance the efficiency of oligonucleotide
 CC inhibition of gene expression. This sequence represents an
 CC oligonucleotide used in the creation of ligand conjugated oligomeric
 CC compounds of the invention.

 PT Eliminating genomic repeat sequences, useful for preparing genome chips
 PT from artificial chromosomes for use in diagnosis of e.g. genetic
 PT diseases.

XX Claim 5; Page 8; 18pp; Chinese.
 XX The invention relates to DNA Amplification by polymerase chain reaction
 CC (PCR), comprising an artificial chromosome or a large DNA fragment of 50-
 CC 5000 base pairs in length as a template and an Alu-specific primer, in
 CC which the primer binds specifically to the 5'-terminus of an Alu sequence
 CC and extends from 3' to 5' of the Alu sequence, or specifically to the 3'-
 CC terminus of an Alu sequence and extends from 5' to 3' of the Alu
 CC sequence. Also included is a method for preparing genome chips,
 CC comprising: (a) obtaining a polynucleotide product by performing the PCR
 CC amplification; and (b) spotting the polynucleotide product onto the chip
 CC substrate to form the gene chip. The method is used for eliminating a
 CC repeat sequence in a genome, which is useful for preparing genome chips
 CC from artificial chromosomes for use in diagnosis of genetic diseases, pre
 CC -labour diagnosis by screening genetic diseases in pregnant women, tumour
 CC typing, diagnosis and prognosis tests, and studying the damaging effects
 CC of radioactive rays and other environmental factors on humans. The method
 CC allows genome chips to be produced with elimination of Alu repeat
 CC sequences and enhanced accuracy by effectively reducing non-specific
 CC background signals during hybridisation. The present sequence is an Alu
 CC sequence-specific PCR primer for performing the method of the invention

XX Novel method for eliminating repeat sequence in genome, applicable in
 PT preparing FISH (fluorescence in-situ hybridization) probes from
 PT artificial chromosome for use in diagnosis of e.g. genetic diseases.
 XX

XX Claim 5; Page 8; 18pp; Chinese.

XX The invention relates to a method of amplification by polymerase chain
 CC reaction (PCR) is by using an artificial chromosome or a large DNA
 CC fragment of 50-5000 base pairs in length as template and an Alu-specific
 CC primer. Also included is a method for preparing a fluorescence-labelling
 CC probe comprising obtaining a polynucleotide product by performing the PCR
 CC amplification and fluorescence-labelling the polynucleotide product to
 CC give the probe. The method is useful for eliminating a repeat sequence in
 CC a genome, which is applicable in preparing genome chips from artificial
 CC chromosome for use in diagnosis of genetic diseases, pre-labour diagnosis
 CC by screening genetic diseases in pregnant women, tumour typing, diagnosis
 CC and prognosis tests and studying damages of radioactive rays and other
 CC environmental factors on humans. With this method, FISH (fluorescence in-
 CC site hybridisation) probes can be produced with elimination of the Alu
 CC repeat sequence and enhanced accuracy by effectively reducing non-
 CC specific background signal during hybridisation. The present sequence
 CC represents the human Alu specific PCR primer Alu-N2

 PT Polymorphic bovine DNA markers - used in genetic identification, gene
 PT mapping, and selective breeding.
 XX
 PS Table 7; Page 245; 517pp; English.
 XX
 CC The sequence is that of a bovine microsatellite sequence obtd. by
 CC screening a library of bovine MboI DNA fragments of between 250 and 500
 CC bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
 CC clones cross-hybridised. Assuming independent distribution of
 CC microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
 CC in the bovine genome is estimated at >100, 000. The sequence information
 CC for ca. 230 such bovine microsatellites is summarised in the
 CC specification and indexed herein (see below). The sequences upstream and
 CC downstream of the microsatellite sequence were used to generate the
 CC required PCR primers for in vitro amplification of the corresp.
 CC microsatellite (using the program OPTIPRM). The microsatellites may be
 CC used to identify individuals, for parentage testing, and in the genetic
 CC mapping of economic trait loci, or genes involved the determinism of
 CC economically important traits esp. in cattle, to allow selective
 CC breeding. See also AAQ33501-34437. (Updated on 23-MAR-2003 to correct PN
 CC field.)

 XX Isolating DNA containing intermediate tandem repeat sequences, useful in
 PT DNA profiling.
 XX

PS Claim 30; Page 20; 111pp; English.

XX This sequence is a PCR primer for a human DNA marker clone used in the method of the invention. The method is for isolating a fragment of DNA containing an intermediate tandem repeat (ITR) sequence using hybridization selection, and comprises: (a) providing several DNA fragments, at least one of which contains an ITR sequence, a region of the DNA fragment which contains at least one repeat unit consisting of a sequence of five, six or seven bases repeated in tandem at least two times; (b) providing a stationary support having at least one oligonucleotide associated with it, where the oligonucleotide includes a sequence of nucleotides which is complementary to a portion of the ITR sequence; and (c) combining the DNA fragments with the support under conditions where the DNA fragments including the DNA fragment containing the ITR sequence hybridize to the support. The method is particularly used to isolate DNA containing pentanucleotide tandem repeat sequences as well as to detect target ITR DNA sequences having a low incidence of stutter artifacts (no more than 2.4%). The method is useful in DNA profiling for linkage analysis, criminal justice, paternity testing and other forensic and medical uses. DNA typing is also useful for confirming the lineage of horses, dogs and other prize animals. The invention overcomes problems related to the use of microsatellite loci in DNA profiling. The method can detect polymorphisms with a low incidence of stutter artifacts, which has previously been a problem in interpreting allelic content of loci. The development of markers based on larger repeat units, enables easier separation of the fragments on electrophoretic gels. This allows the simultaneous analysis of more loci

XX Isolated nucleic acid molecules having polymorphisms in known human genes e.g. cytochrome p450 and cathepsin S useful as genetic linkage markers for locating, identifying and characterizing the genes responsible for disorder-related traits.

XX Example 16; Page 130; 714pp; English.

XX This invention relates to the sequence of an isolated nucleic acid molecule comprising at least one base variation from that of a known human cytochrome P450 A1 (CYP450A1), cytochrome P450 A2 (CYP450A2), cytochrome P450 02E1 (CYP45002E1), adrenergic receptor beta1 (ADRB1), aryl hydrocarbon (AHR), aryl hydrocarbon receptor nuclear translocator (ARNT), cathepsin S (CTSS), cyclooxygenase 2 (COX2), diazepam binding inhibitor (DBI), epoxide hydroxylase 2 (EPHX2), 5-lipoxygenase activating protein (FLAP), glutathione-S-transferase 12 (GST12), histamine-N-methyl transferase (HNMT), kallikrein 2) KUK2, nicotinamide -N-methyl sulfoxyltransferase thermolabile (STM), UDP-glucuronosyl transferase 2B4 (UGT2B4), UDP-glucuronosyl transferase 2B7 (UGT2B7), UDP-glucuronosyl transferase (UGT2B15), urokinase receptor (UPA), multidrug resistance 1 (MDR1), lactotransferrin (LTF), multidrug resistance associated protein 3 (MRP3), orphan nuclear receptor (NR1I2), or acetylcholine muscarinic receptor 1, 2, 3, 4, or 5 (CHMR1, CHMR2, CHMR3, CHMR4 or CHMR5) sequence. The polymorphisms in the human genes cited in the invention are useful as genetic linkage markers for locating and characterizing the genes that are responsible for specific traits within the genome and eventually identifying the genes responsible for a variety of disorder-related traits as a result of their e.g., overexpression, constitutive expression, mutation or underexpression, which may be used in diagnosing and/or treating the disorders. The nucleic acid molecules comprising the polymorphic sequences contained in CYP450A1, CYP450A2, CYP4502E1, ARNT, EPHX2, GST12, NNMT, NQO2, NR1I2, STM, UGT2B4, UGT2B7, UGT2B15, AHR, MDR1 and/or MDR3 are useful for screening individuals for altered drug metabolism. The polymorphic sequences contained in CYP450A1, CYP450A2, AHR, MDR1 and/or MDR3 may also be used to screen individuals for susceptibility to cancer. Polymorphic sequences in ADRB1 or CHMR2 are used to screen for altered cardiovascular function, in COX2 for altered susceptibility to colorectal tumours, in DBI or CHMR1 for altered central nervous system function, in FLAP and HNMT for altered pulmonary, immunological or haematological function, in KUK2 for altered serine protease activity in the prostate, in LTF for altered immunological or haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and peripheral nervous system function. The present sequence represents a polymorphic DNA sequence of the invention

PT	New isolated propionicin T1 polypeptide and nucleic acid, useful for
PT	diagnosing and treating anaerobic bacterial infections, and/or for food
PT	manufacturing and processing as a preservative.
XX	
PS	Example; Page 8; 29pp; English.
XX	
CC	This invention relates to a characterisation of the propionin T1
CC	operon isolated from Propionibacterium thoenii. The operon contains two
CC	genes, namely the novel bacteriocin called propionicin T1 and an ABC
CC	transporter, which represents a putative immunity factor that increases
CC	resistance to the bacteriocin. Bacteriocins are antibacterial peptides
CC	that are useful for diagnosing and treating anaerobic bacterial
CC	infections caused by pathogenic bacteria, and can therefore also be
CC	useful during food processing and as a preservative, particularly for
CC	protecting fermented foods. Furthermore, purified and concentrated

CC bacteriocins can be used directly as food additives. In addition, the ABC
 CC transporter can also serve as a coregulated marker for expression of this
 CC genetic operon. This oligonucleotide sequence is a PCR primer known as
 CC 419PC that is bacteriocin specific and is used in an exemplification of
 CC the invention.

XX Stimulating mammalian monocytes by exposing to an OPG ligand polypeptide,
 PT useful for treating immune related disorders such as autoimmune disease,
 PT rheumatoid arthritis, diabetes, osteoarthritis, psoriasis, and allergy.

XX Example 12; Page 74; 111pp; English.

XX The present sequence is that of a reverse PCR primer for the human

CC receptor activator of NF-kappaB, RANK. A RANK primer/probe set (see also
 CC ABV75845 and ABV75847) was used in FACS assays conducted to examine the
 CC expression of osteoprotegerin ligand (OPGL) and RANK in various cells and
 CC tissues. The results showed that OPGL was able to stimulate RANK mRNA
 CC expression in monocytes in a dose-dependent manner. The invention
 CC provides methods of using OPGL or agonist RANK antibodies to activate
 CC monocytes to secrete chemokines or cytokines. Also provided are methods
 CC of using OPGL to treat conditions or diseases in mammals associated with,
 CC or resulting from lack of, or decreased, chemokine or cytokine secretion
 CC by monocytes. An antagonist comprising an anti-OPGL antibody, an anti-OPG
 CC receptor antibody, an anti-RANK receptor antibody, an OPG receptor
 CC immunoadhesin or a RANK receptor immunoadhesin is used in a claimed
 CC method of treating an immune-related condition, especially an autoimmune
 CC disease, rheumatoid arthritis, insulin dependent diabetes,
 CC osteoarthritis, inflammatory bowel disease (especially ulcerative colitis
 CC or Crohn's disease), psoriasis, transplant rejection or allergy

 PT Polymorphic bovine DNA markers - used in genetic identification, gene
 PT mapping, and selective breeding.
 XX
 PS Table 7; Page 216; 517pp; English.

CC The sequence is that of a bovine microsatellite sequence obtd. by
 CC screening a library of bovine MboI DNA fragments of between 250 and 500
 CC bp with an (AC)₁₅ and a (TC)₁₅ oligonucleotide probe. One out of 50
 CC clones cross-hybridised. Assuming independent distribution of
 CC microsatellites and MboI sites, the frequency of (TC)_n > 9 microsatellites
 CC in the bovine genome is estimated at >100, 000. The sequence information
 CC for ca. 230 such bovine microsatellites is summarised in the
 CC specification and indexed herein (see below). The sequences upstream and
 CC downstream of the microsatellite sequence were used to generate the
 CC required PCR primers for in vitro amplification of the corresp.

CC microsatellite (using the program OPTIPRIM). The microsatellites may be
 CC used to identify individuals, for parentage testing, and in the genetic
 CC mapping of economic trait loci, or genes involved in the determination of
 CC economically important traits esp. in cattle, to allow selective
 CC breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN
 CC field.)

 PT Diagnosing and genotyping of hereditary haemochromatosis (HH) - using
 PT primers to detect specific polymorphisms of the HH gene on chromosome
 PT 6p2.1 or novel microsatellite markers.

XX
 PS Claim 14; Page 15; 67pp; English.

CC The sequences given in AAT71901-72 represent a series of primer pairs
 CC which were used to determine the presence or absence of the common
 CC hereditary haemochromatosis (HH) gene mutation in an individual. The
 CC method comprises assessing genomic DNA from an individual for the
 CC presence or absence of the HH-associated allele of the base-pair
 CC polymorphism HHP-1, HHP-19 or HHP-29, and/or at least one non-optimal
 CC marker comprising the following microsatellite repeat alleles of group A
 CC and optionally of group B: Group A: 19D9(205), 18B4(235), 1A2(239),
 CC 1B4(271), 24E2(245), 2B8(206), 3321-1(197), 4073-1(182), 4440-1(180),
 CC 4440-2(139), 731-1(177), 5091-1(148), 3216-1(221), 4072-2(148), 950-
 CC 1(142), 950-2(164), 950-3(165), 950-4(128), 950-5(180), 950-6(151), 950-
 CC 8(165), 63-1(128), 63-2(169), 63-3(169), 65-1(206), 65-2(81), 373-8(151),
 CC 373-29(109), 68-1(167), 241-6(105), 241-29(113) Group B: D6S464(206),
 CC D6S306(238), D6S258(199), D6S265(122), D6S105(124) and D6S1001(180);
 CC where the number in brackets indicates the number of nucleotides between
 CC and including the flanking primers and the absence of the genotype

CC indicates the likelihood of the presence of the HH mutation. Knowledge of
 CC the new genetic markers allows the definition of genotypes characteristic
 CC of heterozygous carriers and homozygotes having a HH mutation in their
 CC genomic DNA. The potential for HH in an individual interferes with the
 CC effectiveness of interferon treatment for hepatitis C infection. By
 CC diagnosing this potential, the responsiveness of interferon treatment may
 CC be evaluated

 XX New human Disrupted-In-Schizophrenia (DISC) 1 and DISC2 genes containing
 PT single nucleotide polymorphisms, useful for preventing or treating
 PT neuropsychiatric disorders e.g. schizophrenia.
 XX Claim 17; Fig 4; 169pp; English.
 XX The invention relates to a novel Disrupted-In-Schizophrenia (DISC) 1
 CC allelic variant polynucleotide. The polypeptides of the invention have
 CC neuroleptic activity. The polynucleotides may have a use in gene therapy.
 CC DISC1 or DISC2 nucleic acid molecules are useful for diagnosing or
 CC treating a subject having a disease or disorder associated with specific
 CC DISC1 or DISC2 alleles and/or aberrant DISC1 expression or activity e.g.
 CC neuropsychiatric disorder such as schizoaffective, bipolar, unipolar
 CC affective or adolescent conduct disorder or schizophrenia. Similarly, the
 CC compound that inhibits DISC1 protein activity may be used in the method
 CC for treating such neuropsychiatric disorders. The sequences shown in

 XX Polymorphic bovine DNA markers - used in genetic identification, gene
 PT mapping, and selective breeding.
 XX Table 7; Page 221; 517pp; English.
 XX The sequence is that of a bovine microsatellite sequence obtd. by
 CC screening a library of bovine MboI DNA fragments of between 250 and 500
 CC bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
 CC clones cross-hybridised. Assuming independent distribution of
 CC microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
 CC in the bovine genome is estimated at >100, 000. The sequence information
 CC for ca. 230 such bovine microsatellites is summarised in the
 CC specification and indexed herein (see below). The sequences upstream and
 CC downstream of the microsatellite sequence were used to generate the
 CC required PCR primers for in vitro amplification of the corresp.
 CC microsatellite (using the program OPTIPRIM). The microsatellites may be
 CC used to identify individuals, for parentage testing, and in the genetic
 CC mapping of economic trait loci, or genes involved the determinism of
 CC economically important traits esp. in cattle, to allow selective
 CC breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN

XX Modified amplified fragment length polymorphism assay - for detection of
PT polymorphism esp. in micro:satellite regions.
XX
XX Example 2; Page 84; 173pp; English..
XX

CC Detecting polymorphisms between 2 nucleic acid samples, esp. in
CC microsatellite regions, comprises digesting the nucleic acid to generate
CC fragments, ligating adaptor segments to their ends, amplifying them using
CC primer directed amplification and comparing the prods. to detect
CC differences. The primers used in the amplification comprise a primer
CC consisting of a perfect cpd. simple sequence repeat (SSR), and an adaptor
CC directed primer, comprising a sequence complementary to an adaptor
CC segment. The present sequence is an example of a compound SSR primer. The
CC method represents a modified amplified fragment length polymorphism
CC assay, which is partic. useful for genome fingerprinting, i.e. for
CC genetic trait marking and germplasm comparisons

PT using novel nucleic acid mols. as primers.
XX
XX Example 9; Col 59-60; 186pp; English.
XX
XX The invention relates to the isolation of polymorphic repeat sequences
CC having the sequence (dC-dA)n.(dG-dT)n which can be used as genetic
CC markers. Primers based on these sequences can be used to detect these
CC repeats, especially for use in e.g paternity or maternity testing, human
CC genetic analysis such as linkage analysis of genetic disease, commercial
CC animal or plant breeding or pedigree analysis. The sequences AAT66084-
CC T66107 represent repeat sequences of low informativeness found in
CC specific human genes. This repeat sequence is found in the haemoglobin
CC gamma G gene located at chromosomal position 1p15.5. The sequence is
CC amplified by primers AAT66094-5. (Updated on 25-MAR-2003 to correct PF

XX Diagnosis of clinical sub-types of Crohn's disease - by detection of an
PT Arg 241 allele at an ICAM-1 locus to indicate disease with features of
PT ulcerative colitis.

XX Claim 5; Page 43; 56pp; English.

XX This oligonucleotide comprises an intracellular adhesion molecule-1 (ICAM
CC -1) Arg241 allele-specific probe that can be used in a claimed method of
CC diagnosing a clinical subtype of Crohn's disease (CD) that has features
CC of ulcerative colitis. A nucleic acid that includes nucleotide 721 of the
CC human ICAM-1 coding sequence (see AA191271) is isolated from a patient
CC sample. The nucleic acid is then contacted with the Arg241 allele-
CC specific probe, and the presence of a specific hybrid is determined. The
CC probe will form a hybrid with a nucleic acid that has adenine at
CC nucleotide 721 but not with a nucleic acid that has guanine at this
CC position. The invention is based on the discovery that the frequency of
CC the Arg-241 ICAM-1 allele is significantly higher in the perinuclear anti
CC -neutrophil antibody (pANCA)-positive subtype of CD than in CANCA-
CC positive or ANCA-negative subtypes. Seven 7-mer Arg241 allele-specific
CC oligonucleotide probes are also claimed

XX New isolated IMP-18p myo-inositol monophosphatase - used to develop
PT products for determining susceptibility to manic depressive illness and
PT as targets for preventive and therapeutic treatments.

XX Disclosure; Page 3; 118pp; English.

XX A method has been developed for determining a genotype associated with
CC increased susceptibility to manic-depressive (MD) illness. The method
CC comprises determining the genotype of an affected individual with at
CC least one polymorphic marker localised within the chromosomal region
CC defined by and including markers D18S843 and D18S869 and determining the
CC genotype associated with increased susceptibility to MD disorder. The
CC method can be used for determining susceptibility to MD illness including
CC bipolar disorder, genetic counselling of individuals from families
CC affected with MD illness, and aid in the differential diagnosis of MD
CC illness from other psychiatric pathologies. Products from the present
CC invention can also be used to obtain modulators of IMP-18p myo- inositol
CC monophosphatase protein activity and as targets for preventive and
CC therapeutic treatments. The present sequence represents a PCR primer from
CC Table 1 in the present invention (see AAV57798 to AAV57877)

 XX Obtaining unknown DNA sequence flanking a single known sequence for use
 CC as PCR templates, involves single site amplification with polymerase
 CC having strand displacement capability.
 CC Example 1; Col 9-10; lpp; English.
 CC This invention describes a novel method for obtaining DNA of unknown
 CC sequence flanking a single site of known sequence involves single site
 CC amplification of circular DNA template flanking a target DNA of known
 CC sequence using a polymerase having strand displacement capability. The
 CC method is used for obtaining a particular target DNA sequence that can be
 CC useful as templates that contain entire simple sequence repeat (SSR)
 CC alleles for amplification (SSA) procedures e.g. PCR or can be employed as
 CC molecular markers, e.g. in distinguishing between species, strains or
 CC varieties within species or identifying the presence of a disease
 CC condition. It also provides a marker for use in areas such as import and
 CC export regulation, variety and ecotype identification, marker
 CC development, forensic DNA fingerprinting, etc. The method can also be
 CC used to generate a linear DNA molecule containing two target sequences
 CC from one sequence within a single stranded DNA template and flanking
 CC regions for these target sequences. It can also be used for e.g. for
 CC cloning cDNA or genomic DNA which flanks any known short target sequence.
 CC The present method can also be used to obtain entire coding regions of
 CC genes based upon a known nucleic acid sequence or by using a degenerate
 CC nucleic acid sequence derived from amino acid sequence back translation
 CC using a polymerase having strand displacement capability which can
 CC synthesize up to 10 kb fragments. This is especially useful for obtaining
 CC plant genes which are usually less than 10 kb in length. The method
 CC allows accelerated development of high resolution DNA markers that may be
 CC used for fingerprinting, mapping etc., using small amounts of tissue
 CC (less than 1 mug). It also allows the production of a PCR template with
 CC knowledge of only one region of target DNA sequence, the size of which is
 CC regulated only by the primer design. The present method also eliminates
 CC genomic DNA library preparation and screening which are the most time
 CC consuming steps, typically requiring no less than three months, with
 CC total time for target DNA development being between 4-6 months. AAZ89469-

XX Arraying genome clones.

XX Claim 4; Page 50; 528pp; Japanese.

CC The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the markers is changed so that the same discrimination Nos. succeed to the maximum in the specified discrimination Nos. to array the multiwell plates; (e) the clones in the multiwell plates of the specified discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the resultant cultures are amplified by using the above primer; (g) signals are detected from the amplified products; (h) the clones in the multiwell plates are specified from the detected result; and (i) the clones are reconstituted as the positions on the chromosome and arrayed. The microarray is useful for gene analysis. ABL42957 to ABL45322 represent PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634 represent PCR primers for human chromosome 21q22.1, which are specifically claimed for use in the present invention

 PT Kit for diagnosing and treating T-cell associated diseases e.g.
 PT autoimmune, degenerative nervous system and infectious disease, comprises
 PT nucleic acid primers specifically priming and allowing amplification of a
 PT Vbeta gene.
 XX
 PS Disclosure; SEQ ID NO 1278; 164pp; English.
 XX
 CC The invention relates to a kit for diagnosing and treating T-cell
 CC associated diseases which comprises a panel of nucleic acid primers
 CC specifically priming and allowing amplification of each Vbeta gene,
 CC VbetarRNA or cDNA. The kit is useful for diagnosing organ transplant
 CC rejection and diagnosing and treating T-cell associated diseases
 CC including autoimmune diseases, degenerative nervous system diseases,
 CC graft versus host disease, hypersensitivity diseases, infectious diseases
 CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
 CC atrophic gastritis. Degenerative nervous system diseases include multiple

CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
 CC I hypersensitivities such as contact with allergens that lead to
 CC allergies, Type II hypersensitivities such as those present in
 CC Goodpasture's syndrome and Type IV hypersensitivities such as those
 CC manifested in leprosy. Infectious diseases include viral infections
 CC caused by viruses such as HIV, fungal infections such as those caused by
 CC the yeast genus Candida, parasitic infections such as those caused by
 CC schistosomes, filaria and bacterial infections such as those caused by
 CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
 CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
 CC breast. The present sequence represents a Vbeta microsatellite primer.

XX (ALNY-) ALNYLAM PHARM.

PA Manoharan M, Bumcrot D;

XX WPI; 2004-677362/66.

XX Interference RNA agent useful for treating dyslipidemias, coronary artery disease, diabetes, cancer or neurological disease, comprises sense sequence and antisense sequence which has specific modifications.

PS Example 5; SEQ ID NO 6180; 378pp; English.

CC The invention describes a RNA interference (iRNA) agent (I) comprising a sense sequence and an antisense sequence, where the sense sequences have one or more asymmetrical 2'-O alkyl modifications, the antisense sequences have one or more asymmetrical phosphorothioate modifications and the antisense sequence targets a human gene sequence. Also described are a pharmaceutical preparation comprising (I); reducing (M1) apoB-100 levels or glucose-6-phosphatase levels in a subject; producing (I); stabilising (I), involves selecting a sequence with activity and introducing one or more asymmetrical modification in the sequence, where the modification decreases nuclease sensitivity while not decreasing its activity; a kit comprising (I) and instruction for its use; and a device that can be dispense or administer a composition comprising (I). (I) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1) is useful for reducing apoB-100 levels or glucose-6-phosphatase levels. The subject is suffering from a disorder characterised by elevated or otherwise unwanted expression of apoB-100, elevated or otherwise unwanted levels of cholesterol, and/or dysregulation of lipid metabolism. The disorder is chosen from the HDL/LDL cholesterol imbalance, dyslipidaemias, hypercholesterolaemia, statin-resistant disease (CHD) and atherosclerosis. (I) is administered to a subject to inhibit hepatic glucose production or for treating glucose-metabolism-related disorder e.g. diabetes or type-2 diabetes. (I) is useful for treating the diseases as mentioned above, cancer (e.g. breast, colon or lung cancer), neurological disease (e.g., Huntington disease or spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence represents a human glucose-6-phosphatase antisense oligonucleotide that can be used to control HCV gene expression.

 XX
 PT New tumor-associated antigen B345, useful for diagnosis and immunotherapy
 PT of tumors, also related nucleic acid and antibodies.
 XX
 PS Example 6; Page 90; 102pp; German.
 XX
 CC This invention describes a novel tumour-associated antigen, designated
 CC B345 which has cytostatic activity. B345 is involved in communication,
 CC interaction and/or signal transduction with extracellular components and
 CC ligands, especially in the metastatic potential of cancers, particularly
 CC of the colon. B345 or its immunogenic fragments, also the DNA that
 CC encodes it, are useful for immunotherapy of cancer, particularly
 CC carcinoma of lung or colon. Antibodies raised against B345 are useful for
 CC treatment and diagnosis of cancers that are associated with B345
 CC expression, including their use for targeted delivery of cytotoxic or
 CC radioactive agents. Probes derived from B345 can be used to detect tumour
 CC -specific mutations in the B345 sequence, and can be used to screen for
 CC B345 specific modulators. This sequence represents a probe used in the
 CC isolation of the human B345 tumour-associated antigen described in the
 CC invention

 PT New compounds, particularly antisense oligonucleotides targeted to a
 PT nucleic acid encoding caspase 8, useful for treating a disease/condition
 PT associated with caspase 8, such as hyperproliferative or autoimmune
 PT disorders.
 PT
 PS Example 15; SEQ ID NO 94; 59pp; English.
 XX
 CC The invention relates to a compound 8-30 nucleobases in length targeted
 CC to, and which specifically hybridises with a nucleic acid molecule
 CC encoding caspase 8 (a protein involved in apoptosis), and inhibits the
 CC expression of caspase 8, i.e. an antisense oligonucleotide. Also included
 CC are a compound 8-30 nucleobases in length that specifically hybridises
 CC with at least an 8-nucleobase portion of an active site on a nucleic acid
 CC molecule encoding caspase 8, a composition comprising the compound and a
 CC carrier or diluent, inhibiting the expression of caspase 8 in cells or
 CC tissues (by contacting the cells or tissues with the compound so that
 CC expression of caspase 8 is inhibited) and treating an animal having a
 CC disease or condition associated with caspase 8 by administering to the
 CC animal a therapeutic or prophylactic amount of the compound so that
 CC expression of caspase 8 is inhibited. The compound, composition and
 CC methods are useful for treating a disease or condition associated with
 CC caspase 8, such as hyperproliferative, hematopoietic or autoimmune
 CC disorder, viral infection such as AIDS, neurological disorders (e.g.
 CC Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis,
 CC retinitis pigmentosa), blood cell disorders and cancer. They are also
 CC useful in research and diagnostics for modulating the expression of
 CC interleukin 8. The present sequence is a caspase-8 targeting antisense
 CC oligonucleotide of the invention.

 XX
 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 XX Claim 15; SEQ ID NO 13151; 763pp; English.
 XX
 CC This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

XX
CC The present invention relates to an oligonucleotide anti-sense to e.g.,
CC initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-
CC end of nucleic acid target comprising gene(s) chosen from e.g.
CC interleukin (IL)-4 receptor, IL-5 receptor or salts of the
CC oligonucleotide and optionally surfactant operatively linked to the
CC oligonucleotide. The method is useful for preventing or treating a
CC respiratory or lung disease, which involves administering to the airways
CC of a subject an effective amount of an inhibitor. The oligonucleotide is
CC useful for production of a medicament for the prevention and/or treatment
CC of a respiratory or lung disease. The respiratory or lung disease is
CC chosen from airway inflammation, allergy(ies), asthma, impeded
CC respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases
CC (COPD), allergic rhinitis (AR), acute respiratory distress syndrome
CC (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway
CC obstruction. The present sequence represents an oligonucleotide of the

CC The present sequence represents a chimeric antisense oligonucleotide
CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC human mPGES-1 gene is located on chromosome 9, more specifically to
CC 9q34.3. The present invention also describes: (1) antisense compounds,
CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC mPGES-1, which specifically hybridize with the nucleic acid mPGES-1 and
CC inhibits its expression; (2) a method of inhibiting the expression of
CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
CC antisense oligonucleotides and antisense compounds have cytostatic,
CC anti-diabetic, immunomodulatory, cardiant, neuroprotective,
CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC ophthalmological, immunomodulatory and cardiovascular activities, and can
CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC can be used for preparing a composition for treating a disease or
CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC ophthalmic, immunological, cardiovascular or neurological disorder.

 XX New antisense compound, having a sequence targeted to a nucleic acid
 PT encoding mPGES-1, useful for preparing a composition for treating e.g.,

PT inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
 PT ischemia.
 XX
 PS Claim 4; SEQ ID NO 1505; 132pp; English.
 XX
 CC The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC antidiabetic, immunomodulator, cardiant, neuroprotective,
 CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

XX
XX Novel single or multiple target oligonucleotide anti-sense to e.g.
PT Initiation codon, intron of respiratory disease-relevant gene e.g. CCR1,
PT RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g.
PT asthma.
XX
XX Claim 2; SEQ ID NO 630; 174pp; English.
XX
XX The invention relates to oligonucleotides anti-sense to an initiation
CC codon, coding region, 5' or 3' intron-exon junction, intron or region
CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
CC -5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
CC also relates to a method of screening a candidate compound that binds to
CC one or more nucleic acid target(s) or expressed product(s), for the
CC prevention and/or treatment of a respiratory or lung disease. The
CC oligonucleotides are useful for reducing or inhibiting expression of a
CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
CC CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
CC useful for preventing or treating a respiratory or lung disease. The
CC respiratory or lung disease is associated with hyper-responsiveness to
CC and/or increased levels of, adenosine and/or levels of adenosine A
CC receptor(s), and/or asthma and/or lung allergies associated with
CC inflammation or an inflammatory disease. The respiratory or lung disease
CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
CC hypertension, lung inflammation, bronchitis, airway obstruction or
CC bronchoconstriction. This sequence represents an oligonucleotide of the
CC invention.

 XX Arraying genome clones.
 PT Claim 4; Page 32; 528pp; Japanese.
 XX The present invention describes a method of arraying genome clones. The
 CC method comprises: (a) clones of the genomic libraries contained in
 CC multiwell plates numbered for discrimination are mixed in each of the
 CC multiwell plates; (b) a primer designed based on the chromosome marker
 CC sequence is added to the mixture to carry out an amplification reaction;
 CC (c) a signal corresponding to the marker is detected from the resultant
 CC amplified product to specify the discrimination Nos. of the multiwell
 CC plates containing the clones having said marker sequence; (d) the order
 CC of the markers is changed so that the same discrimination Nos. succeed to
 CC the maximum in the specified discrimination Nos. to array the multiwell
 CC plates; (e) the clones in the multiwell plates of the specified
 CC discrimination Nos. are mixed respectively in each wells of longitudinal
 CC and lateral directions; (f) the mixed clones are cultured and the

CC resultant cultures are amplified by using the above primer; (g) signals
 CC are detected from the amplified products; (h) the clones in the multiwell
 CC plates are specified from the detected result; and (i) the clones are
 CC reconstituted as the positions on the chromosome and arrayed. The
 CC microarray is useful for gene analysis. ABL42957 to ABL45322 represent
 CC PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634
 CC represent PCR primers for human chromosome 21q22.1, which are
 CC specifically claimed for use in the present invention

 PS Disclosure; Page 12; 81pp; English.
 XX The generic sequence of a primer set designated Alu-2. The primer set was
 CC based on bases 240-58 of the 3' end of a 300 bp Alu segment. The primers
 CC of the set have an identical sequence to the Alu consensus sequence. Thus
 CC priming with the Alu-1 set directs synthesis towards the 3' end (i.e.
 CC away from the middle) of the Alu segment. Since the primer set is
 CC designed to bind close to the edge of an Alu segment, amplification with
 CC these primers will reduce the amount of Alu segment sequence and increase
 CC the amount of specific chromosomal DNA present required for probe
 CC production. The primer set is useful in the production of chromosomal
 CC specific probes e.g for the detection of chromosomal breakpoints and
 CC rearrangements such as a probe to detect chronic myelogenous leukemia
 CC characterised by the Philadelphia chromosome, arising from a reciprocal
 CC translocation t(9;22) (q34;q11). (Updated on 25-MAR-2003 to correct PN

 XX New antisense oligonucleotides, used for treating e.g. inflammatory
 PT conditions, psoriasis, graft rejection, cancers, infections,
 PT cardiovascular disorders or autoimmune disorders.
 XX
 XX Claim 5; Page 193; 199pp; English.
 XX
 CC This sequence is an antisense oligonucleotide of the invention. The
 CC antisense oligonucleotides are targeted to a nucleic acid encoding a
 CC cellular adhesion molecule (CAM) and is capable of modulating the
 CC expression of the CAM. They particularly inhibit intercellular adhesion
 CC molecule-1 (ICAM-1), vascular cell adhesion molecule-1 (VCAM-1), or
 CC endothelial leukocyte adhesion molecule-1 (ELAM-1). The antisense
 CC oligonucleotides can be used to modulate CAM activity in mediating
 CC cell:cell interactions and subsequent cellular and biological responses,
 CC e.g. T cell activation, leukocyte transmigration and inflammation. The
 CC antisense sequences can be used for modulating the synthesis of a CAM.
 CC They can be used for treating an animal suspected of having or being
 CC prone to a disease or condition associated with a CAM. Oligonucleotides
 CC targeted to ICAM-1 can be used for treating an inflammatory disease or
 CC condition e.g. inflammatory bowel disease such as Crohn's disease,
 CC colitis or ulcerative colitis, a condition of the skin, e.g. psoriasis or
 CC cytotoxic dermatitis, rheumatoid arthritis, allograft rejection, cancer,
 CC pneumonia, multiple sclerosis or a viral infection. The ICAM-1 sequences
 CC can also be used for reducing corticosteroid use in a patient or for
 CC reducing cyclosporine use in a patient. The oligonucleotides can also be

CC used for detection and diagnosis. They can also be used for treating e.g.
 CC hyperproliferative disorders, tumours, diapedesis, graft versus host
 CC disease, arthritis, infections, autoimmune disorders, e.g. autoimmune
 CC thyroid disorders, autoimmune forms of arthritis, multiple sclerosis,
 CC some forms of juvenile diabetes mellitus, myasthenia gravis, pemphigus
 CC vulgaris, systemic lupus erythematosus, cardiovascular disorders,
 CC myocardial ischaemia/reperfusion injury, dilated cardiomyopathy, acute
 CC myocarditis, ischaemic heart disease or stroke

 XX Identifying a subject at risk of melanoma, useful for treating melanoma,
 PT comprises detecting the presence or absence of one or more polymorphic
 PT variations associated with melanoma in a nucleic acid sample from a
 PT subject.
 XX
 XX Example 7; Page 121; 295pp; English.
 XX
 CC The invention relates to a method of identifying a subject at risk of
 CC melanoma comprising detecting the presence or absence of one or more
 CC polymorphic variations associated with melanoma in a nucleic acid sample
 CC from a subject. Preventing melanoma in a subject comprises detecting the
 CC presence or absence of one or more polymorphic variations associated with
 CC melanoma in a nucleic acid sample from a subject; and administering a
 CC melanoma preventative to a subject in need thereof based upon the
 CC presence or absence of the one or more polymorphic variations in the
 CC nucleic acid sample. The preventative reduces ultraviolet (UV) light
 CC exposure to the subject. The methods, nucleic acids, proteins, and
 CC compositions are useful for treating melanoma. The present sequence
 CC represents a human cardiac ankyrin repeat kinase/fucose-1-phosphate
 CC guanylyltransferase, CARX/FPGT, proximal probe.

DR

XX New isolated nucleic acid molecule comprises at least 8 contiguous
PT nucleotides where one of the nucleotides is a single nucleotide
PT polymorphism (SNP), useful for diagnosing or treating autoimmune
PT diseases, e.g. rheumatoid arthritis.
XX

PS Claim 21; SEQ ID NO 6668; 123pp; English.

XX The invention comprises amino acid and coding sequences containing
CC genetic polymorphisms associated with an altered risk of developing an
CC autoimmune disease (e.g. rheumatoid arthritis). The invention further
CC comprises a method of identifying an individual that has an altered risk
CC of developing an autoimmune disease, comprising detecting a single
CC nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA
CC and protein sequences of the invention are useful for diagnosing and
CC treating autoimmune diseases, such as: rheumatoid arthritis, type 1
CC diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory
CC bowel diseases, psoriasis, thyroiditis, celiac disease, pernicious
CC anaemia, asthma, vitiligo, glomerulonephritis, Grave's disease,
CC myocarditis, Sjogren's disease, or primary systemic vasculitis. The
CC present DNA sequence represents a human autoimmune disease-related PCR
CC primer of the invention. NOTE: The present sequence is not shown in the
CC specification, but has been retrieved from the WIPO website.

XX New amine-derivatised nucleoside(s) and oligo:nucleoside(s) - useful as
PT diagnostics, therapeutics and research reagents, partic. in anti-sense
PT therapy.

PS Example 43-44; Page 56; 117pp; English.

XX Oligomers AAQ85816-21 are generated to contain a 2'-O-alkylamino-modified
CC nucleoside containing either a cholesterol or fluorescein functional
CC group. This sequence is an analogue of an antisense sequence to the inter
CC cellular adhesion molecule (ICAM). The modified nucleosides may increase
CC the half-life of the oligomers in cell extract assays for the inhibition
CC of specific genes. The modified oligomer is an example of a compound (see
CC AAQ85799-Q85839 for other examples) e.g. a nucleoside or oligonucleoside,
CC which contains a ribofuranosyl sugar portion and a base portion, such
CC that at least one of the nucleoside contains at a 2'-O-, 3'-O- or 5'-O-
CC position, a substitution (see AAQ85799 for details of the substitutions).
CC The compounds are useful in diagnostics, therapeutics and as research
CC reagents particularly in antisense therapy for killing cells and viruses
CC such as HIV, herpes or papilloma viruses. (Updated on 25-MAR-2003 to
CC correct PN field.)

 PT New genotyping oligonucleotide, useful for detecting the presence,
 PT absence or identity of single polynucleotide polymorphism in a nucleic
 PT acid sample.
 XX
 PS Claim 1; Page 59; 83pp; English.
 XX
 CC Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
 CC primer extension (SNPE) primers, and the sequences of regions flanking
 CC sites of single nucleotide polymorphisms SNPs. The present invention
 CC includes kits for determining the presence or absence of a SNP, using the
 CC oligonucleotides of the invention. The PCR primers are used to amplify a
 CC SNP flanking sequence, the SNPE primer is used as a genotyping primer.
 CC The oligonucleotides are useful for genotyping a nucleic acid sample by
 CC performing a single-nucleotide primer extension reaction. The
 CC oligonucleotides are useful for determining the presence, absence or
 CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to
 CC assess by association analysis the genotype of an individual or group of
 CC individuals, having a pathological phenotypic trait suspected of being
 CC caused by one or more SNPs. Phenotypic traits include diseases e.g.
 CC agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
 CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
 CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
 CC traits also include symptoms of or susceptibility to multifactorial
 CC disease of which a component is or may be genetic such as autoimmune
 CC diseases, including, rheumatoid arthritis, multiple sclerosis,
 CC inflammation, cancer, nervous system diseases and infection by pathogenic
 CC microorganism. The method is also useful in forensic investigations and
 CC paternity analysis. The present sequence represents a PCR primer specific
 CC for a human SNP containing DNA sequence

XX DR New antisense compounds, useful for modulating the expression of BCL2-
XX PT associated X (BAX) protein or for treating a disease or condition
XX PT associated with BAX protein, e.g. Parkinson's disease, Hodgkin's disease
XX PT or Alzheimer's disease.

XX PS Claim 3; Page 94; 139pp; English.

XX CC The present invention describes a compound (I) 8-50 nucleobases in length
XX CC targeted to a nucleic acid molecule encoding BCL2-associated X (BAX)
XX CC protein, where the compound specifically hybridises with the nucleic acid
XX CC molecule encoding BAX protein and inhibits the expression of BAX protein.
XX CC The compound specifically hybridises with at least 8-nucleobase portion
XX CC of an active site on a nucleic acid molecule encoding BAX protein. Also
XX CC described: (1) a composition comprising (I) and a pharmaceutical carrier
XX CC or diluent; (2) inhibiting the expression of BAX protein in cells or
XX CC tissues comprising contacting the cells or tissues with (1); and (3)
XX CC treating an animal having a disease or condition associated with BAX

CC protein comprising administering to the animal (I) so that expression of
 CC BAX protein is inhibited. (I) has neurotropic, neuroprotective,
 CC antiparkinsonian, anticonvulsant, ophthalmological, antidiabetic and
 CC virucide activities, and can be used in antisense therapy, and as a BAX
 CC antagonist. The antisense compounds (I) are useful for modulating the
 CC expression of BAX protein, and for treating a disease or condition
 CC associated with BAX protein, e.g. familial amyotrophic lateral
 CC sclerosis, Alzheimer's disease, Parkinson's disease, Hodgkin's disease,
 CC cartilage-hair hyperplasia, diabetes-associated ocular disorders or
 CC scrapie infection, or a condition that arises from aberrant apoptosis.
 CC The compounds are useful as research reagents and in diagnostics. The
 CC present sequence represents a mouse BAX chimeric phosphorothioate
 CC oligonucleotide, which is used in an example from the present invention.

XX Pharmaceutical composition for treating ailments associated with impaired
 PT respiration, has oligo(s) antisense to specific gene(s) or its
 PT corresponding RNAs, and glucocorticoid or non-glucocorticoid steroid or
 PT ubiquinone.

XX Disclosure; SEQ ID NO 14350; 872pp; English.

XX The invention relates to a novel pharmaceutical composition, which has a
 CC first active agent comprising an oligonucleotide antisense to the
 CC initiation codon, coding region, 5' or 3' end genomic flanking regions,
 CC 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of
 CC junctions of genes encoding a polypeptide associated with lung and/or
 CC nasal airway dysfunction and a second active agent comprising an
 CC antiinflammatory steroid and ubiquinone. A composition of the invention

CC has antiinflammatory, antiallergic, antiasthmatic, hypotensive,
 CC immunosuppressive, and cytostatic activity. The composition may have a
 CC use in antisense gene therapy. The composition is useful for treating or
 CC preventing a respiratory, lung or malignant disease or condition, also
 CC for enhancing the prophylactic or therapeutic respiratory effect of an
 CC antiinflammatory steroid in a subject, for reducing or depleting levels
 CC of, or reducing sensitivity to adenosine, reducing levels of adenosine
 CC receptor, producing bronchodilation, increasing levels of ubiquinone or
 CC lung surfactant in a subject's tissue, or treating bronchoconstriction,
 CC lung inflammation, lung allergies, or a respiratory disease or condition.
 CC Note: The sequence data for this patent is not represented in the printed
 CC specification, but was obtained in electronic format directly from WIPO
 CC at ftp.wipo.int/pub/published_pct_sequences

WPI; 2003-093058/08.

XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.

XX Claim 15; SEQ ID NO 14350; 763pp; English.

XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The

CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hyperinflation, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 CC The present invention relates to an oligonucleotide anti-sense to e.g.,
 CC initiation codon, coding region with 2-10 nucleotides of 5'-end and 3'-
 CC end of nucleic acid target comprising gene(s) chosen from e.g.
 CC interleukin (IL)-4 receptor, IL-5 receptor or salts of the
 CC oligonucleotide and optionally surfactant operatively linked to the
 CC oligonucleotide. The method is useful for preventing or treating a
 CC respiratory or lung disease, which involves administering to the airways
 CC of a subject an effective amount of an inhibitor. The oligonucleotide is
 CC useful for production of a medicament for the prevention and/or treatment
 CC of a respiratory or lung disease. The respiratory or lung disease is
 CC chosen from airway inflammation, allergy(ies), asthma, impeded
 CC respiration, cystic fibrosis (CF), chronic obstructive pulmonary diseases
 CC (COPD), allergic rhinitis (AR), acute respiratory distress syndrome
 CC (ARDS), pulmonary hypertension, lung inflammation, bronchitis, airway
 CC obstruction. The present sequence represents an oligonucleotide of the
 CC invention.

 XX
 XX
 PS Claim 2; SEQ ID NO 1849; 174pp; English.
 XX
 XX The invention relates to oligonucleotides anti-sense to an initiation
 CC codon, coding region, 5' or 3' intron-exon junction, intron or region
 CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
 CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
 CC -5 receptor, CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
 CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
 CC also relates to a method of screening a candidate compound that binds to
 CC one or more nucleic acid target(s) or expressed product(s), for the
 CC prevention and/or treatment of a respiratory or lung disease. The
 CC oligonucleotides are useful for reducing or inhibiting expression of a
 CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
 CC CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
 CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
 CC useful for preventing or treating a respiratory or lung disease. The
 CC respiratory or lung disease is associated with hyper-responsiveness to
 CC and/or increased levels of, adenosine and/or levels of adenosine A
 CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hyperinflation, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

 XX
 XX Use of calcitonin receptor-like receptor (CRLR) genes for determining if
 PT a test compound can regulate expression of CRLR gene, for screening a
 PT test compound to counteract hypertension in glucocorticoid administration
 PT or for tumor therapy.
 XX
 XX Example 4; Page 24; 43pp; English.
 PS
 XX The invention relates to the use of the calcitonin receptor-like receptor
 CC (CRLR) gene for determining whether a test compound can regulate
 CC expression of CRLR gene, screening a test compound for ability to
 CC counteract hypertension in the course of glucocorticoid administration to
 CC a patient, diagnosing a lesion as a tumour, reducing the hypertensive
 CC side effect of a glucocorticoid administration regime in a patient, or
 CC for tumour therapy. The agents, e.g. adrenomedullin, CGRP or functional
 CC analogues of the peptides are useful in manufacture of a preparation for
 CC reducing the hypertensive side effect of a glucocorticoid administration
 CC regime. The compound that up-regulates CRLR gene expression or the up-
 CC regulator of CRLR gene promoter activity is also useful in the
 CC manufacture of a preparation for reducing the hypertensive side-effect of
 CC a glucocorticoid administration regime or for treating a condition where
 CC it is desired to promote vasodilation and/or angiogenesis. The compound
 CC that down-regulates CRLR expression in microvascular endothelial cells
 CC under hypoxic conditions is useful in the manufacture of a medicament for
 CC use in tumour therapy, e.g. a patient identified as having a tumour
 CC exhibiting elevated CRLR or elevated corresponding mRNA. It is also
 CC useful in the manufacture of a combined preparation for simultaneous,
 CC sequential or combined administration of the compound with an
 CC adrenomedullin binding inhibitor for tumour therapy. Glucocorticoid, or
 CC an analogue is useful in the manufacture of a preparation for up-
 CC regulating the CRLR gene promoter in micro vascular endothelial cells or
 CC for up-regulating a glucocorticoid responsive promoter derived from a
 CC CRLR gene in a vector administered for gene therapy. The compound
 CC identifiable or identified as an up-regulator of CRLR gene promoter
 CC activity is useful in the manufacture of a product for use in up-
 CC regulating a glucocorticoid responsive promoter derived from a CRLR gene
 CC in a vector administered for gene therapy. The present sequence
 CC represents a human calcitonin receptor-like receptor, CRLR, gene 5'

CC The method aims to provide a collection of highly reproducible
CC microsatellite marker sequences (MMS) at approx. 10-50 cM intervals
CC throughout the human genome which can be detectably labelled. The MMS are
CC polymorphic, simple sequence repeats and can be used in automated
CC genotyping, esp. fluorescence-based. The primers correspond to the unique
CC DNA sequence surrounding each marker, and PCR is used to detect each
CC polymorphism. When the MMS show considerable polymorphism (ie. a
CC difference in the number of repeats) between individuals, the markers can
CC be particularly informative. The MMS can be ideal for linkage studies.
CC Kits comprise at least 4 groups, of at least 3 sets, each comprising
CC labelled primers for PCR amplification of the DNA. Group 2 primer pairs
CC are shown in AAQ95369-416. The published size range of the ATRSB allele
CC is 337-343 bp, and the degree of heterozygosity in the population is
CC about 60%

PT Determination of pre-disposition to hypertension - by detecting mutation
PT G-6A in the angiotensin gene.
XX
XX
PS Example 3; Col 13; 26pp; English.
XX
XX
CC This sequence represents a PCR primer for human growth hormone, that can
CC be used in the method of the invention. The method is for the
CC determination of the predisposition of a human to essential hypertension
CC or pregnancy induced hypertension and comprises, analysing the DNA
CC sequence of the angiotensinogen (AGT) gene for the G-6A mutation, where
CC the presence of the mutation is indicative of a predisposition to
CC essential or pregnancy induced hypertension. The method is useful for the
CC molecular identification of hypertension. The mutation in the AGT gene at
CC position -6 leads to increased plasma AGT concentrations, giving the
CC physiological symptoms for this disease. The mutation (G to A) can be
CC screened for using sequencing methods or hybridisation with a mutation
CC specific primer. Previous disposition to the condition relied on
CC inheritance analysis (ratios, calculations, etc.) between
CC parents/siblings to determine linkage. With the method, a specific
CC diagnosis can be made

PT New isolated LDL-receptor related protein - used to develop products for

```

PT treating, e.g. elevated triglyceride levels, diabetes, autoimmune
PT disorders, inflammation or Alzheimer's disease.

XX Claim 12; Page 106; 200pp; English.

XX The present invention describes LRP5 (low density lipoprotein (LDL)
CC receptor related protein, previously designated LRP-3). AAV85587 to
CC AAV85922 represent exon primers used for obtaining LRP5 cDNA. Nucleic
CC acid molecules (NAMS) encoding LRP5 can be used for determining if an
CC individual is susceptible to insulin dependent diabetes mellitus (IDDM).
CC The NAMS or proteins can be used for reducing triglyceride levels in the
CC serum of an individual. Therapies that affect LRP5 may also be useful in
CC the treatment of autoimmune diseases such as glomerulonephritis, diseases
CC and disorders involving disruption of endocytosis and/or antigen
CC presentation, cytokine clearance and/or inflammation, viral infection,
CC pathogenic bacterial toxin contamination, elevation of free fatty acids
CC or hypercholesterolemia, type 2 diabetes, osteoporosis, Alzheimer's
CC disease and cardiovascular disease. Products from the present invention
CC can also be used for detection, diagnosis and drug screening

 CC The invention identifies a genetic locus ASTH1, associated with asthma,
 CC mapped to human chromosome 11p. ASTH1I and ASTH1J are genes present
 CC within the locus, located close to each other on human chromosome 11p,
 CC and have similar patterns of expression, and common sequence motifs. The
 CC ASTH1 genes and fragments, encoded protein, genomic regulatory regions
 CC and anti-ASTH1 antibodies are useful in the identification of individuals
 CC predisposed to development of asthma, and for the modulation of gene
 CC activity in vivo for prophylactic and therapeutic purposes. The ASTH1
 CC protein is useful as an immunogen to raise specific antibodies, in drug
 CC screening for compositions that mimic or modulate ASTH1 activity or
 CC expression, including altered forms of ASTH1 protein, and as a
 CC therapeutic. Sequences AAZ18510-218631 represent PCR primers for
 CC polymorphic microsatellite markers in the ASTH1 region

XX  Analyzing the DNA sequence of the angiotensinogen (AGT) gene for the
PT  mutation A-20C is useful for determining a predisposition to
PT  hypertension.
XX
XX  Example 3; Col 13; 25pp; English.
XX
XX  This sequence represents hGH-A1819 PCR primer #1, used with primer #2.
CC  (AAZ38450) to amplify a portion of the human growth hormone (hGH) gene
CC  for linkage analysis with the angiotensin-converting enzyme (ACE) gene.
CC  Genetic studies revealed that the genes encoding two key enzymes in the
CC  angiotensin II synthetic pathway, renin and ACE, were not associated with
CC  human hypertension; however, the angiotensinogen (AGT) gene was involved
CC  in the pathogenesis of essential hypertension. Sequence variations in the
CC  AGT gene can be identified via amplification of gene fragments via PCR,
CC  using primers AAZ38431-Z38448, and subsequent sequence analysis.
CC  Molecular variants of the AGT gene contribute to an individual's
CC  susceptibility to the development of hypertension. Analysis of the AGT
CC  gene can be used to identify individuals with a genetic predisposition to
CC  develop essential hypertension or pregnancy-induced hypertension.
CC  Detection of a predisposition would then allow specific management of
CC  hypertension in these subjects e.g., by dietary sodium restriction, by
CC  monitoring blood pressure and treating with conventional drugs, by
CC  administration of renin inhibitors or by administration of drugs to
CC  inhibit synthesis of AGT

XX
XX  New antisense oligonucleotides targeting nucleic acids encoding human
PT  MDMX useful for inhibiting MDMX expression and for treating diseases
PT  associated with MDMX expression e.g. tumor formation, inflammation.
XX
XX  Example 15; Col 97-98; 51pp; English.
XX
XX  This invention describes a novel antisense compound (I), 8-30 nucleobases
CC  in length, targeted to a nucleic acid encoding a human MDMX. (I)
CC  specifically hybridizes with and inhibits the expression of human MDMX.
CC  The products of the invention have anticarcinogen, antiinflammatory and
CC  antiinfectious activity. Synthesized chimeric oligonucleotides targeted
CC  to human MDMX, 20 nucleotides in length, composed of a central gap region
CC  consisting of ten 2'-deoxynucleotides flanked on both sides by 5-
CC  nucleotide wings were tested for antisense inhibition of MDMX expression.
CC  Results of real-time quantitative polymerase chain reaction (PCR) showed
CC  71 out of the 159, 20 base pair sequences, all fully defined in the
CC  specification, demonstrated at least 30% inhibition of MDMX expression.
CC  The antisense oligonucleotides are useful for effective and specific
CC  modulation, particularly inhibition of MDMX expression, and may be used
CC  in treating humans or animals suspected of having or being prone to a
CC  disease or condition associated with expression of MDMX. The antisense
CC  oligonucleotides may also be used as research reagents or kits, and as
CC  diagnostics, e.g. to elucidate the function of a particular gene or to
CC  distinguish between functions of various members of a biological pathway,
CC  and as prophylaxis, e.g. to prevent or delay infection, inflammation or
CC  tumor formation. AAZ11781-A11945 represent antisense oligonucleotides
CC  described in the method of the invention

 XX PT New antisense oligonucleotides targeting nucleic acids encoding human
 PT MDMX useful for inhibiting MDMX expression and for treating diseases
 PT associated with MDMX expression e.g. tumor formation, inflammation.
 XX PS Example 15; Col 97-98; 51pp; English.
 XX CC This invention describes a nucleic acid encoding (I), 8-30 nucleobases
 CC in length, targeted to a nucleic acid encoding a human MDMX. (I)
 CC specifically hybridizes with and inhibits the expression of human MDMX.
 CC The products of the invention have anticarcinogen, antiinflammatory and
 CC antiinfectious activity. Synthesized chimeric oligonucleotides targeted
 CC to human MDMX, 20 nucleotides in length, composed of a central gap region
 CC consisting of ten 2'-deoxynucleotides flanked on both sides by 5-
 CC nucleotide wings were tested for antisense inhibition of MDMX expression.
 CC Results of real-time quantitative polymerase chain reaction (PCR) showed
 CC 71 out of the 159, 20 base pair sequences, all fully defined in the
 CC specification, demonstrated at least 30% inhibition of MDMX expression.
 CC The antisense oligonucleotides are useful for effective and specific
 CC modulation, particularly inhibition of MDMX expression, and may be used
 CC in treating humans or animals suspected of having or being prone to a
 CC disease or condition associated with expression of MDMX. The antisense
 CC oligonucleotides may also be used as research reagents or kits, and as
 CC diagnostics, e.g. to elucidate the function of a particular gene or to
 CC distinguish between functions of various members of a biological pathway,
 CC and as prophylaxis, e.g. to prevent or delay infection, inflammation or
 CC tumor formation. AA11781-11945 represent antisense oligonucleotides
 CC described in the method of the invention

 XX PT New nucleic acids other than naturally occurring chromosomes encoding
 PT ASTH1 protein, for e.g. screening compositions that modulate expression
 PT or function of ASTH1 proteins or as diagnostics for genetic
 PT predisposition to asthma.
 XX PS Example; Col 31-32; 131pp; English.
 XX CC The invention relates to the ASTH1 locus on the short arm of human
 CC chromosome (11p). This locus comprises the ASTH1I and ASTH1J genes, which
 CC are associated with a genetic predisposition to asthma and bronchial
 CC hyperreactivity. The ASTH1I and ASTH1J genes are oriented in opposite
 CC directions with the ASTH1 locus, and have similar patterns of expression
 CC and common sequence motifs. They are both expressed in trachea, lung and
 CC several other tissues. ASTH1I and ASTH1J are novel members of the ets
 CC family of transcription factors, which have been implicated in the
 CC activation of a variety of genes including the TCRA gene and cytokine
 CC genes known to be important in the aetiology of asthma. Both ASTH1I and
 CC ASTH1J mRNAs are alternatively spliced. Alternative splicing of
 CC transcripts has no effect on the open reading frame of ASTH1J, as the
 CC exons involved are all 5' to the start codon in exon b. In contrast,
 CC alternative splicing of ASTH1I transcripts results in 3 different ASTH1I
 CC isoforms. The invention also encompasses mouse asth1j protein. The ASTH1
 CC nucleic acids are useful as diagnostics to identify a hereditary
 CC predisposition to asthma, as probes for identifying ASTH1 related genes,
 CC for identifying expression of the gene in a biological specimen, and for
 CC generating genetically modified non-human animals or site specific gene
 CC modifications in cell lines. The encoded ASTH1 proteins are useful as
 CC immunogens to raise specific antibodies; in drug screening for
 CC compositions that mimic or modulate activity or expression of ASTH1I
 CC and/or ASTH1J (including altered forms of these proteins); and as a
 CC therapeutic. The ASTH1I genes or fragments thereof, encoded proteins,
 CC ASTH1I genomic regulatory regions, and anti-ASTH1I and anti-ASTH1J
 CC antibodies are useful in the identification of individuals predisposed to
 CC development of asthma, and for modulation of gene activity in vivo for
 CC prophylactic and therapeutic purposes. The intact ASTH1I or ASTH1J
 CC proteins or active fragments thereof may be used to modulate or reduce
 CC bronchial hyperreactivity. Sequences AAA80417-AAA80538 represent sequences
 CC flanking polymorphic microsatellite markers in the ASTH1 region, which
 CC were also used as PCR primers for amplification of the markers for
 CC batched analysis of genotypes (BAGs)

XX Kit for detecting presence of polymorphisms linked to gene associated
 PT with familial dysautonomia (FD), comprises specific primers which detect
 PT polymorphisms, D9S309 and D9S310 identified in candidate region for FD
 PT gene.

XX Disclosure; Col 10; 28pp; English.

XX The present sequence for PCR primer #1 is used with PCR primer #2
 CC (AAS09244) to amplify DNA marker D9S58. Various oligonucleotide sequences
 CC (AAS09239-AAS09272) are described in an invention relating to the
 CC detection of polymorphisms associated with familial dysautonomia (FD).
 CC The FD gene has been mapped to chromosome 9q31-q33 by linkage with 10 DNA
 CC markers in 26 FD families. A kit to detect the presence of polymorphisms
 CC linked to a gene associated with FD, the Riley-Day syndrome (an autosomal
 CC recessive disorder characterised by developmental loss of neurons from
 CC sensory and autonomic nervous system) in an individual, comprises a

CC nucleic acid primer of at least 15 contiguous nucleotides and at least
 CC one other reagent. The kits are useful for diagnosing familial
 CC dysautonomia and the test can be used prenatally to screen a foetus, or
 CC presymptomatically to screen a subject at risk in affected FD families

XX New genotyping oligonucleotide, useful for detecting the presence,
 PT absence or identity of single polynucleotide polymorphism in a nucleic
 PT acid sample.

XX Claim 1; Page 62; 83pp; English.

XX Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
 CC primer extension (SNPE) primers, and the sequences of regions flanking
 CC sites of single nucleotide polymorphisms SNPs. The present invention
 CC includes kits for determining the presence or absence of a SNP, using the
 CC oligonucleotides of the invention. The PCR primers are used to amplify a
 CC SNP flanking sequence, the SNPE primer is used as a genotyping primer.
 CC The oligonucleotides are useful for genotyping a nucleic acid sample by
 CC performing a single-nucleotide primer extension reaction. The
 CC oligonucleotides are useful for determining the presence, absence or
 CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to
 CC assess by association analysis the genotype of an individual or group of
 CC individuals, having a pathological phenotypic trait suspected of being
 CC caused by one or more SNPs. Phenotypic traits include diseases e.g.
 CC agammaglobulinaemia, diabetes insipidus, Leach-Nyhan syndrome, muscular
 CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
 CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
 CC traits also include symptoms of or susceptibility to multifactorial
 CC disease of which a component is or may be genetic such as autoimmune

CC diseases, including, rheumatoid arthritis, multiple sclerosis,
 CC inflammation, cancer, nervous system diseases and infection by pathogenic
 CC microorganism. The method is also useful in forensic investigations and
 CC paternity analysis. The present sequence represents a PCR primer specific
 CC for a human SNP containing DNA sequence

XX An antisense compound, useful for treating e.g. cancer, comprises

PT nucleobases targeted a region (e.g. translation termination codon region)

PT of a nucleic acid encoding human mdm2.

XX Example 9; Page 18; 81pp; English.

XX The present invention relates to antisense compounds, 8-30 nucleobases in

CC length targeted to the 5' untranslated region, translation termination

CC codon region, 3' untranslated region, coding region or translation start

CC site of a nucleic acid encoding human mdm2, where the antisense compound

CC modulates the expression of human mdm2. The antisense oligonucleotides of

CC the invention are useful for encoding human mdm2 and for inhibiting the

CC expression of human mdm2. They may be used for treating an animal having

CC a disease or condition associated with amplification of mdm2 gene or

CC overexpression of mdm2 e.g. a hyperproliferative disorder such as cancer

CC (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis,

CC fibrosis, atherosclerosis or restenosis, tumours, colorectal carcinoma

CC and chronic myelogenous leukemia. The antisense compound may be

CC administered with a chemotherapeutic agent to overcome drug resistance.

CC The antisense compound reduces hyperproliferation of human cells. The

CC method, which involves the use of the antisense compound, is also useful

CC for detecting the role of mdm2 expression in various cell functions and

CC physiological processes and useful in both clinical research and

CC diagnostic tools. AAS29242-AAS29507 represent the human mdm2 antisense

XX
XX The present invention describes a method of arraying genome clones. The
CC method comprises: (a) clones of the genomic libraries contained in
CC multiwell plates numbered for discrimination are mixed in each of the
CC multiwell plates; (b) a primer designed based on the chromosome marker
CC sequence is added to the mixture to carry out an amplification reaction;
CC (c) a signal corresponding to the marker is detected from the resultant
CC amplified product to specify the discrimination Nos. of the multiwell
CC plates containing the clones having said marker sequence; (d) the order
CC of the markers is changed so that the same discrimination Nos. succeed to
CC the maximum in the specified discrimination Nos. to array the multiwell
CC plates; (e) the clones in the multiwell plates of the specified
CC discrimination Nos. are mixed respectively in each wells of longitudinal
CC and lateral directions; (f) the mixed clones are cultured and the
CC resultant cultures are amplified by using the above primer; (g) signals
CC are detected from the amplified products; (h) the clones in the multiwell
CC plates are specified from the detected result; and (i) the clones are
CC reconstituted as the positions on the chromosome and arrayed. The
CC microarray is useful for gene analysis. ABL42957 to ABL45322 represent

PT Detecting a polymorphism linked to a gene associated with familial
FT dysautonomia, involves analyzing human chromosome 9 for the presence of
PT the polymorphism.
XX
PS Disclosure; Page 6; 17pp; English.

This invention relates to a novel method for detecting a polymorphism linked to a gene associated with familial dysautonomia (FD). Familial dysautonomia is an autosomal recessive disorder characterised by the developmental loss of neurons from the sensory and autonomic nervous system. The method of the invention comprises analysing human chromosome 9 and detecting the presence of a polymorphism located between the genetic markers D9S53 and D9S105 inclusive, and linked to the gene associated with familial dysautonomia. The invention also includes nucleotide sequences for detecting a polymorphism associated with familial dysautonomia. Using the method of the invention it was possible to show that the gene for PD is located on human chromosome 9q31-q33. The method and sequences of the invention are useful for the diagnosis of familial dysautonomia and for the identification of carriers of the disease gene, such information will facilitate prenatal diagnosis and help reduce the number of new cases of FD. The present sequences represent an oligonucleotide primer that can be used to screen for the D9S58 genetic marker on chromosome 9, this primer was used to map the location of the familial dysotonomia gene

 XX New antisense compounds, useful for modulating the expression of BCL2-
 PT associated X (BAX) protein or for treating a disease or condition
 PT associated with BAX protein, e.g. Parkinson's disease, Hodgkin's disease
 PT or Alzheimer's disease.
 PT Claim 3; Page 94; 139pp; English.
 XX The present invention describes a compound (I) 8-50 nucleobases in length
 CC targeted to a nucleic acid molecule encoding BCL2-associated X (BAX)
 CC protein, where the compound specifically hybridises with the nucleic acid
 CC molecule encoding BAX protein and inhibits the expression of BAX protein.
 CC The compound specifically hybridises with at least 8-nucleobase portion
 CC of an active site on a nucleic acid molecule encoding BAX protein. Also
 CC described: (1) a composition comprising (I) and a pharmaceutical carrier
 CC or diluent; (2) inhibiting the expression of BAX protein in cells or
 CC tissues comprising contacting the cells or tissues with (I); and (3)
 CC treating an animal having a disease or condition associated with BAX
 CC protein comprising administering to the animal (I) so that expression of
 CC BAX protein is inhibited. (I) has nootropic, neuroprotective,
 CC antiparkinsonian, anticonvulsant, ophthalmological, antidiabetic and
 CC virucide activities, and can be used in antisense therapy, and as a BAX
 CC antagonist. The antisense compounds (I) are useful for modulating the
 CC expression of BAX protein, and for treating a disease or condition
 CC associated with BAX protein, e.g. familial amyotrophic lateral
 CC sclerosis, Alzheimer's disease, Parkinson's disease, Hodgkin's disease,
 CC cartilage-hair hyperplasia, diabetes-associated ocular disorders or
 CC scrapie infection, or a condition that arises from aberrant apoptosis.
 CC The compounds are useful as research reagents and in diagnostics. The
 CC present sequence represents a mouse BAX chimeric phosphorothioate

CC oligonucleotide, which is used in an example from the present invention.

PT New compound, having a sequence targeted to a nucleic acid encoding
PT CD36L1, useful for preparing a composition for treating
PT hyperproliferative or autoimmune disorders.
XX
XX
PS Example 15; Page 82; 122pp; English.
XX
XX
CC The invention relates to antisense compounds, compositions and methods
CC for modulating the expression of class B scavenger receptor, CD36 antigen
CC -like 1 (CD36L1). CD36L1 is also known as scavenger receptor class B type
CC 1 (SRB1), CLA-1 and mouse homologue, SR-BI. The antisense compound is
CC useful for preparing a composition for treating metabolic or
CC cardiovascular disorder, e.g. altered lipid metabolism or
CC atherosclerosis. It is also used in gene therapy. The present sequence is
CC an antisense oligonucleotide targetted to human CD36L1 DNA. This sequence

CC is used to illustrate the method of the invention

XX
XX
CC This invention relates to novel antisense oligonucleotides that modulate
CC the expression of human eukaryotic translation initiation factor 2C 1
CC (EIF2C1). EIF2C1 is located on chromosome 1p34-35, and is also known as
CC Co-eIF2C, eIF2C, Golgi ER protein 95kDa, GERP95 and Q99. It is an
CC intracellular membrane associated protein thought to be involved in
CC cellular differentiation, such that altered expression of EIF2C1 can
CC affect cell growth, morphology and tumorigenicity. Accordingly,
CC antisense oligonucleotides that inhibit the expression of EIF2C1 in cells
CC or tissues can be used in gene therapy to treat various conditions
CC including hyperproliferative disorders, familial hypercholesterolaemia
CC and cancer, as well as polycystic kidney disease, cystic fibrosis and
CC progeria syndrome. As such, the oligos of the present invention can be
CC described as having cytostatic and antilipaeamic activities. This

CC oligonucleotide sequence is an antisense oligo used to inhibit expression
CC of the human eukaryotic translation initiation factor 2C 1 (EIF2C1) DNA
CC of the invention.

 PS Claim 15; SEQ ID NO 5095; 763pp; English.
 XX
 CC This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition

CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc., tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 PT Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 PS Claim 15; SEQ ID NO 13142; 763pp; English.

XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 PT autoimmune, degenerative nervous system and infectious disease, comprises
 PT nucleic acid primers specifically priming and allowing amplification of a
 PT Vbeta gene.
 XX PS Example 6; SEQ ID NO 1214; 164pp; English.
 XX CC The invention relates to a kit for diagnosing and treating T-cell
 CC associated diseases which comprises a panel of nucleic acid primers
 CC specifically priming and allowing amplification of each Vbeta gene,
 CC VbetarNA or cDNA. The kit is useful for diagnosing organ transplant
 CC rejection and diagnosing and treating T-cell associated diseases
 CC including autoimmune diseases, degenerative nervous system diseases,
 CC graft versus host disease, hypersensitivity diseases, infectious diseases
 CC and neoplastic diseases. Autoimmune diseases include Addison's disease,
 CC atrophic gastritis. Degenerative nervous system diseases include multiple
 CC sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
 CC I hypersensitivities such as contact with allergens that lead to
 CC allergies, Type II hypersensitivities such as those present in
 CC Goodpasture's syndrome and Type IV hypersensitivities such as those
 CC manifested in leprosy. Infectious diseases include viral infections
 CC caused by viruses such as HIV, fungal infections such as those caused by
 CC the yeast genus Candida, parasitic infections such as those caused by
 CC schistosomes, filaria and bacterial infections such as those caused by
 CC Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
 CC such as leukaemias, lymphomas and cancers such as cancer of the brain,
 CC breast. The present sequence represents a cosmid C215 repeat region PCR
 CC primer.

 XX New predictor sets with a plurality of polynucleotides and/or
 PT polypeptides whose expression pattern predicts cell response to a
 PT compound that modulates protein tyrosine kinase activity, useful in
 PT treating breast cancer.
 XX
 PS Disclosure; SEQ ID NO 516; 649pp; English.
 XX
 CC The invention relates to a novel predictor set comprising a plurality of
 CC polynucleotides and/or polypeptides whose expression pattern is
 CC predictive of the response of cells to treatment with a compound that
 CC modulates protein tyrosine kinase activity or members of the protein
 CC tyrosine kinase pathway. The molecules of the invention demonstrate
 CC cytostatic, antiangiogenic, vasotropic and vulnerary activities and may
 CC be useful in the field of pharmacogenomics, in particular for determining
 CC drug sensitivity and in treating breast cancer, hypervascular diseases,
 CC angiogenesis and scars in wound healing. The current sequence is that of
 CC a human protein tyrosine kinase biomarker-related RT-PCR primer of the
 CC invention.

 XX
 XX New antisense oligonucleotides for modulating geranylgeranyl diphosphate
 PT synthase 1 expression, useful for diagnosing, preventing or treating
 PT conditions associated with the protein, e.g. cancer.
 PT
 PS Example 15; SEQ ID NO 71; 76pp; English.
 XX
 CC This invention relates to a novel antisense compounds that modulate the
 CC expression of human geranylgeranyl diphosphate synthase 1 (also known as
 CC GGPS1, geranylgeranyl pyrophosphate synthetase, GGPPS, ggppase and
 CC geranyltransferase) and located on chromosome 1p43. Specifically, it
 CC refers to compositions useful for inhibiting the expression of GGPS1,
 CC which normally participates in embryonic development, cell
 CC differentiation and stimulates apoptosis via caspase-3 activation. The

CC present invention describes antisense oligonucleotides that comprise at
 CC least one modified sugar moiety, a 2'-O-methoxyethyl (2' MOE) and at
 CC least one modified nucleobase, a 5-methylcytosine. Accordingly, these
 CC compounds are useful for treating a disease or condition associated with
 CC GSPS1 such as a developmental or hyperproliferative disorder (e.g.
 CC cancer) that arise as a result of aberrant apoptosis. As such, these
 CC compositions exhibit cytostatic activity and are useful for diagnostics,
 CC prophylaxis, research reagents and various kits. This oligonucleotide
 CC sequence is a phosphorothioate antisense DNA oligo used to modulate human
 CC geranylgeranyl diphosphate synthase 1 expression in an exemplification of
 CC the invention.

XX New antisense compound, having a sequence targeted to a nucleic acid
 PT encoding mPGES-1, useful for preparing a composition for treating e.g.,
 PT inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
 PT ischemia.

XX Claim 4; SEQ ID NO 1366; 132pp; English.

XX The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridize with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytosolic,
 CC antidiabetic, immunomodulator, cardiant, neuroprotective,
 CC antiinflammatory, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

XX Claim 4; SEQ ID NO 597; 132pp; English.

XX The present sequence represents a chimeric antisense oligonucleotide
 CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
 CC human mPGES-1 gene is located on chromosome 9, more specifically to
 CC 9q34.3. The present invention also describes: (1) antisense compounds,
 CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
 CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
 CC inhibits its expression; (2) a method of inhibiting the expression of
 CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
 CC antisense oligonucleotides and antisense compounds have cytostatic,
 CC anti-diabetic, immunomodulatory, cardiant, neuroprotective,
 CC anti-inflammatory, neuroprotective, neurotropic, antiarthritic, vasotropic,
 CC ophthalmological, immunomodulatory and cardiovascular activities, and can
 CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
 CC can be used for preparing a composition for treating a disease or
 CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
 CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
 CC ophthalmic, immunological, cardiovascular or neurological disorder.

CC The invention relates to oligonucleotides anti-sense to an initiation
CC codon, coding region, 5' or 3' intron-exon junction, intron or region
CC with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target
CC chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)
CC -5 receptor, CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM,
CC tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention
CC also relates to a method of screening a candidate compound that binds to
CC one or more nucleic acid target(s) or expressed product(s), for the
CC prevention and/or treatment of a respiratory or lung disease. The
CC oligonucleotides are useful for reducing or inhibiting expression of a
CC gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor,
CC CCR1, CCR3, Botaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a,
CC tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are
CC useful for preventing or treating a respiratory or lung disease. The
CC respiratory or lung disease is associated with hyper-responsiveness to
CC and/or increased levels of, adenosine and/or levels of adenosine A
CC receptor(s), and/or asthma and/or lung allergies associated with
CC inflammation or an inflammatory disease. The respiratory or lung disease
CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
CC hypertension, lung inflammation, bronchitis, airway obstruction or
CC bronchoconstriction. This sequence represents an oligonucleotide of the
CC invention.

XX Use of leukotriene synthesis inhibitor for manufacture of a medicament
PT for treatment for myocardial infarction or susceptibility to myocardial
PT infarction in individual.
XX Disclosure; SEQ ID NO 394; 306pp; English.
PS The present invention describes using a leukotriene synthesis inhibitor
XX (I) for the manufacture of a medicament for the treatment of myocardial
CC infarction or susceptibility to myocardial infarction in an individual.
CC Also described is a method (M1) for the treatment of acute coronary
CC syndrome (ACS) in an individual comprising administering (I). (I) has
CC antiatherosclerotic, cardiant and antianginal activities, and can be used
CC as a leukotriene biosynthesis inhibitor, and a leukotriene receptor
CC antagonist. (I) can be used for the manufacture of a medicament for the
CC treatment of myocardial infarction or susceptibility to myocardial
CC infarction in an individual who has at least one risk factor chosen from
CC an at-risk haplotype for myocardial infarction, an at-risk haplotype in a
CC the 5-lipoxygenase activating protein (FLAP) gene, a polymorphism in a
CC FLAP nucleic acid and an at-risk polymorphism in the 5-lipoxygenase (5-
CC LO) gene promoter; in an individual who has at least one risk factor
CC chosen from diabetes, hypertension, hypercholesterolemia, elevated
CC lp(a), obesity, past or current smoker; in an individual having elevated
CC inflammatory marker chosen from C-reactive protein (CRP), serum amyloid
CC A, fibrinogen, leukotriene, leukotriene metabolite, interleukin-6, tissue
CC necrosis factor-alpha, soluble vascular cell adhesion molecule (sVCAM),
CC soluble intervascular adhesion molecule (sICAM), E-selectin, matrix
CC metalloprotease type-1, matrix metalloprotease type-2, matrix
CC metalloprotease type-3 and matrix metalloprotease type-9; in an
CC individual having increased low density lipoprotein (LDL) cholesterol
CC and/or decreased high density lipoprotein (HDL) cholesterol; in an
CC individual having increased leukotriene synthesis; in an individual
CC having previous myocardial infarction or acute coronary syndrome (ACS)
CC event, stable angina; or in an individual who has atherosclerosis or who
CC requires treatment to restore blood flow in arteries. (M1) is useful for
CC treating an individual suffering from acute coronary syndrome chosen from
CC unstable angina, non-ST-elevation myocardial infarction (NSTEMI) and ST-
CC elevation myocardial infarction (STEMI). The human FLAP gene is located
CC on chromosome 13, more specifically to 13q12. The present sequence
CC represents a microsatellite marker used in the exemplification of the
CC present invention.

XX
PS Claim 30; Page 20; 11pp; English.
XX
CC This sequence is a PCR primer for a human DNA marker clone used in the
CC method of the invention. The method is for isolating a fragment of DNA
CC containing an intermediate tandem repeat (ITR) sequence using
CC hybridization selection, and comprises: (a) providing several DNA
CC fragments, at least one of which contains an ITR sequence, a region of
CC the DNA fragment which contains at least one repeat unit consisting of a
CC sequence of five, six or seven bases repeated in tandem at least two
CC times; (b) providing a stationary support having at least one
CC oligonucleotide associated with it, where the oligonucleotide includes a
CC sequence of nucleotides which is complementary to a portion of the ITR
CC sequence; and (c) combining the DNA fragments with the support under
CC conditions where the DNA fragments including the DNA fragment containing
CC the ITR sequence hybridize to the support. The method is particularly
CC used to isolate DNA containing pentanucleotide tandem repeat sequences as
CC well as to detect target ITR DNA sequences having a low incidence of
CC stutter artifacts (no more than 2.4%). The method is useful in DNA
CC profiling for linkage analysis, criminal justice, paternity testing and
CC other forensic and medical uses. DNA typing is also useful for confirming
CC the lineage of horses, dogs and other prize animals. The invention
CC overcomes problems related to the use of microsatellite loci in DNA
CC profiling. The method can detect polymorphisms with a low incidence of
CC stutter artifacts, which has previously been a problem in interpreting
CC allelic content of loci. The development of markers based on larger
CC repeat units, enables easier separation of the fragments on
CC electrophoretic gels. This allows the simultaneous analysis of more loci

KW Preparing library of protein-producing eukaryotic cells, useful for
PT producing humanized high-affinity antibodies, comprises introducing
PT specific recombination signals into chromosomal gene loci and integrating
PT a variety of DNA sequences.
XX
PS Example 5; Fig 14C; 75pp; German.
XX
CC This invention describes a novel method of preparing a library of protein
CC producing eukaryotic cells comprising (a) introducing specific
CC recombination signals into one or two chromosomal gene loci, (b)
CC expanding at least one of the modified cells, (c) transfecting many
CC different DNA sequences, each flanked by recombination signals, into the
CC expanded cells and (d) integrating the DNA sequences into the gene loci
CC on the basis of the recombination signals and the appropriate
CC recombinase. The resulting cells express different proteins, each from an
CC integrated DNA sequence and the proteins are bound to the cell surface.
CC The method is particularly used to produce libraries of humanized
CC monoclonal antibodies, for selection of those with affinity for
CC particular antigens and useful for diagnostic or therapeutic use.
CC Libraries of T cell receptors may also be prepared. The method produces
CC libraries of high diversity; provides easy, quick and automatable
CC selection from a large number of proteins, allows relatively simple
CC alteration of the expressed gene (e.g. fusion to other protein-coding
CC sequences), is suitable for large scale protein production and allows
CC simple verification and characterization of selected cell lines. The
CC method does not require incorporation of a resistance marker. This
CC sequence represents a PCR primer used to amplify the genes of the
CC invention.

PS
XX
XX  The invention relates to a method of designing primers for simultaneous
CC  amplification of target DNA fragments in a single multiplex polymerase
CC  chain reaction by aligning a first primer and a second primer. The method
CC  comprises: (a) aligning a first primer and a second primer; and (b)
CC  selecting the first primer where the first primer at its 3' end does not
CC  contain four or more bases that are perfectly matching to the 3' end
CC  sequence of the first primer or a second primer, the first primer at its
CC  3' end does not contain seven or more bases that are perfectly matching
CC  except one mismatch to the 3' end sequence of the first primer or the
CC  second primer, the first primer at its 3' end does not contain six or
CC  more bases that are perfectly matching to a sequence anywhere of the
CC  first primer or the second primer, and the first primer at its 3' end
CC  does not contain eleven or more bases that are perfectly matching except
CC  one mismatch to a sequence anywhere of the first primer or the second
CC  primer. The method is useful for designing primers for simultaneous
CC  amplification of target DNA fragments in a single multiplex polymerase
CC  chain reaction. It is also useful in the identification of multiple genes
CC  related to multifactorial diseases, the genome-scale detection of genetic
CC  alterations, the studies in pharmacogenetic reactions, the genotyping
CC  genetic polymorphisms in a large population, the gene expression
CC  profiling in various samples and high throughput genotyping technologies.
CC  This sequence corresponds to an example of a primer of the invention.

XX Nucleoside and oligo:nucleoside analogues contg. alkyl-thiol gp. - useful
PT for antisense applications e.g. modulating gene expression and detecting
PT the presence or absence of RNA in a sample.
XX
XX Example 18; Page 28; 48pp; English.
XX
XX The sequences given in AAT45853-54 represent thiol-modified
CC oligonucleotides. These sequences are antisense to sequences found in the
CC intracellular adhesion molecule (ICAM) coding sequence. These
CC oligonucleotides may be used to inhibit gene expression in vivo by
CC hybridising to mRNA expressed in the cell. They are therefore useful in
CC antisense technology. The modification of the backbone with an alkylthiol
CC functionality improves cellular and membrane transport as it is
CC lipophilic

PT incorporating steroids, reporter molecules, peptides or proteins attached
PT through the alkylthio gp.
XX
XX Example 18; Col 16; 14pp; English.
XX
XX This sequence represents an antisense oligonucleotide inhibitor of
CC intracellular adhesion molecules (ICAM). The invention relates to a
CC nucleoside that comprises a ribofuranosyl sugar portion and a base
CC portion, and bears at a 2'-O-, 3'-O- or 5'-O-position a substitution of
CC formula -Rs-S-R1, where Rs = Ra, Ra-C(O)-Q-Ra, or Ra-O-Ra-Q-Ra; each Ra =
CC 1-10C alkyl, each Q = NH, O or S; R1 = H, a thiol protecting group, or a
CC group S-R2, CH2C(O)NR2, CH2CH=CHC(O)R2, CH2CH2NHSO2-R2 or (maleimido)-R2
CC ; and R2 = a steroid molecule, a reporter molecule, a lipophilic
CC molecule, a peptide, a protein, an alkylator, an intercalator, a crown
CC ether, a crown amine, a porphyrin, a peptide nucleic acid, a thiol
CC attached to a poly(ethylene glycol), or a crosslinking agent. The
CC nucleosides may be incorporated into oligonucleosides or
CC oligonucleotides. They are capable of modulating the activity of DNA or
CC RNA and may be used e.g. to inhibit the expression of particular genes in
CC cells of an organism, to inhibit transcription and/or replication of
CC particular genes, to induce degradation of particular regions of double
CC stranded DNA in cells of an organism, or for killing cells or viruses.
CC The compounds include an alkylthiol chemical functionality. They exhibit
CC improved transfer across cellular membranes

XX XX Treating bacterial infections in humans or animals with
XX PT oligo:nucleotide(s) - resistant to nuclease and targetted to bacterial
XX PT nucleic acid or proteins, also conjugates of these oligo:nucleotide(s)
XX PT with antibiotics.
XX XX
XX PS Claim 49; Page 87; 163pp; English.
XX XX
XX CC This antisense oligonucleotide is nuclease resistant and can be used in
XX CC the treatment of animals, including humans, having a bacterial infection.
XX CC The treatment comprises administration of such nuclease resistant
XX CC oligonucleotides, targeted to a nucleic acid or protein of the bacterium,
XX CC and formulated with a carrier. A compound comprising this nuclease
XX CC resistant oligonucleotide can be covalently linked to an antibiotic. The
XX CC method is used to treat infections by a wide variety of Gram-positive and
XX CC Gram-negative, or acid-fast, bacteria, in human and veterinary medicine.
XX CC The methods are particularly used in immuno-compromised individuals (e.g.
XX CC patients with acquired immunodeficiency syndrome or those receiving
XX CC chemotherapy or radiation therapy), optionally in combination with, or
XX CC fused to, antiviral or other antimicrobial oligonucleotides. Apart from
XX CC therapeutic use, the oligonucleotides can be used to control bacteria in
XX CC laboratory cultures, foods, beverages and industrial processes. The
XX CC oligonucleotides are specific for bacteria, without affecting metabolism
XX CC in mammalian cells. They may also activate RNase H and have a general,
XX CC non-specific immune-stimulating effect. The oligonucleotides can be
XX CC administered orally, intranasally, rectally, topically or by injection,
XX CC optionally coupled to an agent (e.g. carbohydrate or polyamine) that
XX CC enhances cellular uptake

 XX DR Reagent for nucleic acid sequencing by primer extension, used to detect
 XX PT mutations and to diagnose infectious or genetic diseases.
 XX XX Example 7; Page 27; 47pp; English.
 XX XX The present invention describes a sequencing reagent (I) comprising: (a)
 XX CC a capture group (CG) that can form a stable complex with a region of a
 XX CC template nucleic acid (II); (b) spacer region (SR); and (c) sequence-
 XX CC specific hybridisation region (SSHR) of 4-8 bases able to hybridise to a
 XX CC complementary sequence on (II). Also described are: (1) array comprising
 XX CC an orderly arrangement of many (I), immobilized on a solid support; and
 XX CC (2) method of sequencing (II) using a combinatorial array of (I). Arrays
 XX CC of (I) are used for sequencing nucleic acids by a primer extension
 XX CC method, e.g. to scan for mutations (particularly single-nucleotide
 XX CC polymorphisms) and for diagnosis of infectious and genetic diseases.
 XX CC Arrays of (I) allow sequencing of templates without any prior knowledge
 XX CC of the wild-type or expected sequence. By separating the capture and
 XX CC specific hybridisation functions, it becomes possible to use smaller
 XX CC primers, simplifying array analysis, reducing costs and allowing
 XX CC thousands of hybridisation reactions to be done simultaneously.
 XX CC Particularly, 4 times fewer primers are required, compared with standard
 XX CC methods, i.e. since primer extension increases the effective length of
 XX CC the primer by 1 base, an array of n-mers will be as effective as an array
 XX CC of n+1-mers in usual methods. The method may be applied to single- or
 XX CC double-stranded DNA. AAX76410 to AAX76440 represent sequencing reagent
 XX CC array oligonucleotide primers used in an example from the present
 XX CC invention

 XX
 XX New simple sequence repeats having 2 or more tandemly repeated nucleotide
 PT core elements isolated from ryegrass and fescue, useful for selecting of
 PT genes in grass or cereal breeding or profiling grass or cereal species
 PT varieties.
 XX
 XX Claim 6; Page 51; 72pp; English.
 XX
 XX The invention relates to a substantially purified or isolated nucleic
 CC acid (I) from ryegrass or fescue species including a simple sequence
 CC repeat (SSR), having 2 or more tandemly repeated nucleotide core elements
 CC 2-6 nucleotides in length. Also included are a nucleic acid primer
 CC suitable for amplifying an SSR, identifying (M1) an SSR by preparing a
 CC library of ryegrass or fescue genomic DNA enriched for SSRs and
 CC identifying clones in the library containing SSRs, a library of ryegrass
 CC or fescue genomic DNA enriched for SSRs prepared by the M1, selecting for
 CC a gene in grass or cereal breeding by identifying an SSR that is closely
 CC associated with the gene such that the SSR and the gene are
 CC preferentially co-inherited, and selecting for the SSR in the breeding, a
 CC method for DNA profiling grass or cereal species varieties by assessing
 CC variation between SSR varieties and testing the purity of grass or cereal
 CC seed batches by assessing variation within seed batch of an SSR. The SSRs
 CC may be used in the selection of genes in grass or cereal breeding, for
 CC profiling grass or cereal species varieties, for testing the purity of
 CC grass or cereal seed batches, and for DNA profiling to establish the
 CC distinct identity, uniformity and/or stability of a cultivar. The present
 CC sequence is a ryegrass or fescue SSR

PT Composition comprising synthetic oligonucleotides which comprise multiple
 PT repeats of dinucleotides such as GT, TG useful for treating cancer by
 PT inducing cell cycle arrest, inhibiting proliferation, activating
 PT caspases.

XX Claim 5; Page 17; 77pp; English.

XX
 CC The present sequence is that of a synthetic oligonucleotide useful to the
 CC invention. The invention relates to a composition, comprising a 2 to 20
 CC base 3'-OH, 5'-OH synthetic oligonucleotide which comprises multiple
 CC repeats of dinucleotides such as GT, TG, etc., according to specific
 CC formula and having cytostatic activity. The oligonucleotide compositions
 CC are useful for inducing cell cycle arrest, inhibition of proliferation,
 CC activation of caspases and induction of apoptosis or production of
 CC cytokines such as interleukin (IL)-1-beta, IL-6, IL-10, IL-12 and tumour
 CC necrosis factor (TNF)-alpha by immune system cells, in an animal having
 CC cancer such as primary carcinoma, secondary carcinoma, primary sarcoma
 CC and secondary sarcoma such as, leukemia, lymphoma, breast, prostate,
 CC colorectal, ovarian or bone cancer. The compositions induce apoptosis
 CC independent of Fas, p53/p21, p21/waf-1/CIP, p15(ink4B), p16(ink4), drug
 CC resistance, caspase 3, transforming growth factor (TGF)-beta 1 receptor
 CC and hormone dependence

XX
 PT New genotyping oligonucleotide, useful for detecting the presence,
 PT absence or identity of single polynucleotide polymorphism in a nucleic
 PT acid sample.

XX Claim 1; Page 57; 83pp; English.

XX
 CC Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
 CC primer extension (SNPE) primers, and the sequences of regions flanking
 CC sites of single nucleotide polymorphisms SNPs. The present invention
 CC includes kits for determining the presence or absence of a SNP, using the
 CC oligonucleotides of the invention. The PCR primers are used to amplify a
 CC SNP flanking sequence, the SNPE primer is used as a genotyping primer.
 CC The oligonucleotides are useful for genotyping a nucleic acid sample by

CC performing a single-nucleotide primer extension reaction. The
 CC oligonucleotides are useful for determining the presence, absence or
 CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to
 CC assess by association analysis the genotype of an individual or group of
 CC individuals, having a pathological phenotypic trait suspected of being
 CC caused by one or more SNPs. Phenotypic traits include diseases e.g.
 CC agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
 CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
 CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
 CC traits also include symptoms of or susceptibility to multifactorial
 CC disease of which a component is or may be genetic such as autoimmune
 CC diseases, including, rheumatoid arthritis, multiple sclerosis,
 CC inflammation, cancer, nervous system diseases and infection by pathogenic
 CC microorganism. The method is also useful in forensic investigations and
 CC paternity analysis. The present sequence represents a PCR primer specific
 CC for a human SNP containing DNA sequence

XX Oligonucleotides and oligonucleosides useful in diagnostics comprise
 PT several linked nucleosides containing alkylthio chemical functionality.

XX Example 18; Col 16; 17pp; English.

XX The invention relates to oligonucleotides and oligonucleosides comprising
 CC several linked nucleosides having alkylthio chemical functionality. Thio-
 CC derivatised nucleosides and oligonucleosides have improved transfer
 CC across cellular membranes, provide improvements in research and
 CC diagnostic methods and materials for assaying disease states in animals,
 CC provide therapeutic and research materials having improved transfer and
 CC uptake properties for the treatment of diseases through modulation of the
 CC activity of RNA and DNA. The oligonucleotides and nucleosides are used in
 CC diagnostics, therapeutics and as research reagents and kits; in
 CC pharmaceutical compositions; for treating organisms having a disease
 CC characterised by the undesired production of a protein. The present
 CC sequence is antisense phosphorothioate oligo for synthesis of
 CC oligonucleotides

XX Novel simple sequence repeats in clover species useful for selection of

PT genes in legume breeding, for profiling legume species varieties and for

PT testing the purity of legume seed batches.

XX Claim 6; Page 35; 52pp; English.

XX The present invention relates to Simple Sequence Repeats (SSRs) from

CC clover species. SSRs, also called microsatellites, are based on a 1-7

CC nucleotide core element which is tandemly repeated. The SSR array is

CC embedded in complex flanking DNA. SSRs are ideal markers for genome

CC mapping, trait mapping and marker-assisted selection. The SSRs may be used in methods for selecting genes in clover/legume breeding. The SSRs are also useful for DNA profiling of clover varieties and for testing the purity of legume seed batches. The present sequence is a SSR motif, which was used in the present invention

XX Arraying genome clones.

PS Claim 4; Page 25; 528pp; Japanese.

XX The present invention describes a method of arraying genome clones. The method comprises: (a) clones of the genomic libraries contained in multiwell plates numbered for discrimination are mixed in each of the multiwell plates; (b) a primer designed based on the chromosome marker sequence is added to the mixture to carry out an amplification reaction; (c) a signal corresponding to the marker is detected from the resultant amplified product to specify the discrimination Nos. of the multiwell plates containing the clones having said marker sequence; (d) the order of the markers is changed so that the same discrimination Nos. succeed to the maximum in the specified discrimination Nos. to array the multiwell plates; (e) the clones in the multiwell plates of the specified discrimination Nos. are mixed respectively in each wells of longitudinal and lateral directions; (f) the mixed clones are cultured and the resultant cultures are amplified by using the above primer; (g) signals are detected from the amplified products; (h) the clones in the multiwell plates are specified from the detected result; and (i) the clones are reconstituted as the positions on the chromosome and arrayed. The microarray is useful for gene analysis. ABL42957 to ABL45322 represent PCR primers for human chromosome 1p36-35 DNA, and ABL45323 to ABL45634 represent PCR primers for human chromosome 21q22.1, which are specifically claimed for use in the present invention

 XX New diagnostic composition, useful for diagnosing obesity related to the
 PT presence of a molecular variant of the MCHR1 gene or a susceptibility to
 PT the disorder.
 XX
 XX Example 2; Page 43; 76pp; English.
 PS
 XX The invention relates to a novel diagnostic polynucleotide composition.
 CC The polynucleotide composition comprises: a sequence encoding a
 CC polypeptide with defined sequences given in the specification; a sequence
 CC capable of hybridizing to a melanin-concentrating hormone receptor 1
 CC (MCHR1) gene; a polynucleotide encoding an MCHR1 polypeptide; or a
 CC sequence comprising one or more of the nucleotide exchanges (SNP's) given
 CC in the specification and at least 8 bases of surrounding sequence of the
 CC MCHR1 gene. The composition has anorectic activity. The polynucleotide
 CC composition may be used in gene therapy to treat the disorders of the
 CC invention. The composition is useful for diagnosing obesity related to
 CC the presence of a molecular variant of the MCHR1 gene or a susceptibility
 CC to the disorder. The MCHR1 protein or polynucleotide is useful for
 CC preparing a medicament for treating or preventing obesity related to the
 CC presence of a molecular variant of the MCHR1 gene. This polynucleotide
 CC represents an MCHR1 primer of the invention.

 DR
 XX Typing genes that contain polymorphic microsatellite loci, useful for
 PT identifying predisposition to disease, by amplification and determining
 PT length of amplicons.
 XX
 XX Example 3; Page 30; 64pp; German.
 PS
 XX The invention describes a method of typing (M1) a gene (I) that has one
 CC or more polymorphic microsatellite loci (PML). The method comprises: PCR
 CC amplification of at least one DNA region of (I) that includes PML, using
 CC as template a DNA sample containing at least one segment of (I); and
 CC determining the length of the resulting amplicon(s). Also described are:
 CC a method of determining (M2) microsatellite markers (MM) for
 CC predisposition to a disease, associated with a gene that includes one or
 CC more PML; and prediagnosis (M3) of diseases associated with gene that
 CC include PML. The method is used to identify microsatellite markers, in a
 CC disease-related gene, that are associated with a predisposition to
 CC diseases and for prediagnosis of such diseases, especially prion diseases
 CC but also cystic fibrosis, malignant hyperthermia syndrome in pigs and
 CC metabolic diseases; also to type genes that encode milk proteins,
 CC hormones or transcription factors. The method is simpler, quicker and
 CC particularly less expensive than known methods based on sequencing. This
 CC sequence represents a primer used to genotype a region of the sheep prion
 CC protein (PrP) comprising a polymorphic microsatellite locus.

XX Identifying a hair growth modulator for treating alopecia and unwanted
 PT hair growth such as hirsutism, comprises identifying a P-cadherin
 PT modulator and testing whether the P-cadherin modulator is functional as a
 PT hair growth modulator.

XX Example; SEQ ID NO 52; 121pp; English.

XX The present invention describes a method (M1) for identifying a hair
 CC growth modulator. (M1) comprises identifying a P-cadherin modulator, and
 CC testing whether the P-cadherin modulator is functional as a hair growth
 CC modulator. Also described: (i) a hair growth modulator (I) identified by
 CC (M1); and (2) a composition (II) for modulating hair growth, comprising,
 CC as an active ingredient, a P-cadherin modulator functional as a hair
 CC growth modulator. (I) and (II) have endocrine and depilatory activities,
 CC and can be used as hair growth modulators, P-cadherin function
 CC modulators, and in gene and antisense therapy. (M1) is useful for
 CC identifying a hair growth modulator. (I) is useful in a method of medical
 CC treatment. (I) or (II) is useful for modulating hair growth for non-
 CC therapeutic cosmetic purposes which involves administering to a subject,
 CC (I) or (II). (I) can be used in the manufacture of a medicament for the
 CC therapeutic modulation of hair growth. (I) or (II) is useful for treating
 CC alopecia (baldness) and unwanted hair growth such as hirsutism. (I) or
 CC (II) comprising P-cadherin inducer is useful for correction of hair loss
 CC in congenital hypotrichosis associated with juvenile macular dystrophy
 CC (HJMD) and other alopecia patients. The present sequence represents a PCR
 CC primer human P-cadherin, which is used in an example from the present
 CC invention.

 XX Interference RNA agent useful for treating dyslipidemias, coronary artery
 PT disease, diabetes, cancer or neurological disease, comprises sense
 PT sequence and antisense sequence which has specific modifications.
 XX Example 5; SEQ ID NO 5386; 378pp; English.
 XX The invention describes a RNA interference (iRNA) agent (I) comprising a
 CC sense sequence and an antisense sequence, where the sense sequences have
 CC one or more asymmetrical 2'-O alkyl modifications, the antisense
 CC sequences have one or more asymmetrical phosphorothioate modifications
 CC and the antisense sequence targets a human gene sequence. Also described
 CC are a pharmaceutical preparation comprising (I); reducing (MI) apoB-100
 CC levels or glucose-6-phosphatase levels in a subject; producing (I);
 CC stabilising (I), involves selecting a sequence with activity and
 CC introducing one or more asymmetrical modification in the sequence, where
 CC the modification decreases nuclease sensitivity while not decreasing its
 CC activity; a kit comprising (I) and instruction for its use; and a device
 CC that can be dispense or administer a composition comprising (I). (I) is
 CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (MI)
 CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
 CC The subject is suffering from a disorder characterised by elevated or
 CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
 CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
 CC disorder is chosen from the HDL/LDL cholesterol imbalance,
 CC dyslipidaemias, hypercholesterolaemia, statin-resistant
 CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
 CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
 CC inhibit hepatic glucose production or for treating glucose-metabolism-
 CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
 CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
 CC lung cancer), neurological disease (e.g., Huntington disease or
 CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
 CC represents a human glucose-6-phosphatase antisense oligonucleotide that
 CC can be used to control glucose-6-phosphatase gene expression.

XX

CC This invention relates to a novel activated mutant protein tyrosine
 CC kinases and associated methods for diagnosing cancer and screening for
 CC anti-cancer agents. Protein kinases are signalling molecules involved in
 CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
 CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
 CC the majority of mutations occurring in the NTRK3, FES, GUCY2F and
 CC MCKK/MLK4 genes. Most were identified in the kinase domain. The invention
 CC may be useful for the production of compounds with a cytostatic activity
 CC acting as protein tyrosine kinase inhibitors or guanylate cyclase

CC stimulators. The invention may be useful for developing methods for
 CC detecting mutations involved in cancer or screening for anti-cancer
 CC agents. The present sequence is that of a human-derived oligonucleotide
 CC which is related to the invention.

PT Detection of polymorphic genetic markers of the form (dC-dA)n(dG-dT)n -
PT using novel nucleic acid mols. as primers.
XX
PS Claim 7; Col 13-14; 186pp; English.

```

XX The invention relates to the isolation of polymorphic repeat sequences
 CC having the sequence (dC-dA)n.(dG-dT)n which can be used as genetic
 CC markers. Primers based on these sequences can be used to detect these
 CC repeats, especially for use in e.g. paternity or maternity testing, human
 CC genetic analysis such as linkage analysis of genetic disease, commercial
 CC animal or plant breeding or pedigree analysis. Clones containing the
 CC repeat sequences were isolated by hybridisation of chromosome-specific
 CC phage libraries with a synthetic poly(dC-dA).(dG-dT) probe. Over 100
 CC repeat blocks were isolated. The primers AAT65798-T66047 were used to PCR
 CC amplify the inserts from the isolated clones containing the repeat
 CC sequences. The primers AAT66046-7 were used to amplify the repeat
 CC sequence marker clone Mdi25 (AAT65796). (Updated on 25-MAR-2003 to
 CC correct PF field.)

 PT Detecting single nucleotide polymorphisms - by hybridisation with
 PT interrogation primer and extending this with non-extendible nucleotide or
 PT analogue which is then identified.
 XX
 PS Disclosure; Page 7; 57pp; English.
 XX
 CC A method has been developed for the detection of one or more single
 CC polymorphisms in the same sample. The method comprises: (a) hybridising
 CC at least one distinguishable interrogation oligonucleotide primer (IP) to
 CC one or more target nucleic acids (TNA), each IP being specific for a
 CC unique region in TNA with the 3'-end of IP immediately adjacent to a
 CC specific and unique target nucleotide (nt); (b) extending IP with a
 CC template-dependent polymerase in presence of at least one non-extendible
 CC nt (or analogue); and (c) determining, for each IP, the identity of the
 CC non-extendible nt or analogue incorporated, i.e. the complement of the
 CC target nt, so identifying each target nt. The method is used to identify
 CC a trait (specifically a genetic disease or condition) in nucleic acid
 CC from an animal, plant, bacterium, fungus, yeast, virus, viroid or other
 CC heritable agent. Applications include determining identity (Genetic
 CC fingerprinting); ancestry; predisposition to genetic diseases or
 CC conditions (e.g. cancer, asthma, blindness); presence or absence of
 CC desirable trait; diagnosis of disease (e.g. haemophilia or sickle-cell
 CC anaemia) and to relate polymorphisms to particular traits. AAX03996 to
 CC AAX04067 represent the invariant 5'-proximal and 3'-distal sequences of
 CC polymorphic sites of corresponding equine alleles

XX
XX Determining predisposition of humans to develop autoimmune disease
PT involves detecting polymorphic microsatellite repeat sequence within
PT human costimulatory receptor gene locus.
XX
PS Claim 18; Page 147; 160pp; English.
XX
XX PCR primers AAA96371-72 were used to amplify polymorphic microsatellite
CC repeat (PMR) sequences from the human costimulatory receptor gene locus
CC (hCGRL). The primers are used in the method of the invention. The
CC specification describes a method for determining the predisposition of a
CC human subject to develop autoimmune disease. The method comprises
CC detecting a PMR sequence in the CD28, ICOS gene or CTLA4 gene of the
CC human costimulatory receptor gene locus (hCGRL). PMR sequences vary in
CC length among individuals and can be amplified to generate products that
CC differ in size. These products can then be detected by rapid and
CC convenient high resolution processes. The method is useful for
CC determining the predisposition of insulin-dependent diabetes mellitus
CC (IDDM), Addison's disease, Graves disease, autoimmune hypothyroidism,
CC myasthenia gravis, thymoma, lupus, thyroiditis, postpartum thyroiditis,
CC rheumatoid arthritis, Hashimoto's disease, coeliac disease and leprosy.
CC PMR sequences within hCGRL are useful as markers in a variety of assays
CC and in the field of forensic medicine, disease diagnosis and human genome
CC mapping

 PT of a nucleic acid encoding human mdm2.
 XX
 XX Example 9; Page 18; 81pp; English.
 PS
 XX The present invention relates to antisense compounds, 8-30 nucleobases in
 CC length targeted to the 5' untranslated region, translation termination
 CC codon region, 3' untranslated region, coding region or translation start
 CC site of a nucleic acid encoding human mdm2, where the antisense compound
 CC modulates the expression of human mdm2. The antisense oligonucleotides of
 CC the invention are useful for encoding human mdm2 and for inhibiting the
 CC expression of human mdm2. They may be used for treating an animal having
 CC a disease or condition associated with amplification of mdm2 gene or
 CC overexpression of mdm2 e.g. a hyperproliferative disorder such as cancer
 CC (blood, brain, breast, lung, or a soft tissue cancer) and psoriasis,
 CC fibrosis, atherosclerosis or restenosis, tumours, colorectal carcinoma
 CC and chronic myelogenous leukemia. The antisense compound may be
 CC administered with a chemotherapeutic agent to overcome drug resistance.
 CC The antisense compound reduces hyperproliferation of human cells. The
 CC method, which involves the use of the antisense compound, is also useful
 CC for detecting the role of mdm2 expression in various cell functions and
 CC physiological processes and useful in both clinical research and
 CC diagnostic tools. AAS29242-AAS29507 represent the human mdm2 antisense
 CC oligonucleotides of the present invention

PT treating or preventing inflammation, cancer, psoriasis or diabetes.
 PS Example 15; Page 90; 135pp; English.
 XX
 CC The present invention describes a compound (I) comprising 8-50
 CC nucleobases which is targeted to a 5' untranslated region (UTR), coding,
 CC 3' UTR or intron region of a nucleic acid molecule encoding phospholipase
 CC A2, group IIA (synovial), where the compound specifically hybridises with
 CC and inhibits the expression of phospholipase A2, group IIA (synovial).
 CC Also described: (1) a composition comprising the compound and a carrier
 CC or diluent; (2) a method of inhibiting the expression of phospholipase
 CC A2, group IIA in cells or tissues; and (3) a method of treating an animal
 CC having a disease or condition associated with phospholipase A2, group IIA
 CC (synovial). (I) has antiinflammatory, antidiabetic, cytostatic and
 CC anaporiatic activities, and can be used in vaccines and in gene
 CC therapy. The compound (I) can be used for preparing a composition for
 CC treating or preventing inflammation, cancer, psoriasis or diabetes. The
 CC present sequence represents a mouse phospholipase A2 group IIA (synovial)
 CC chimeric phosphorothioate antisense oligonucleotide, which is used in an
 CC example from the present invention

 PT New antisense oligonucleotides targeted to nucleic acids encoding
 PT inhibitor-kappa B-R, useful for diagnosing or treating diseases
 PT associated with expression of inhibitor-kappa B-R, e.g., a heightened
 PT immune response or infection.
 XX
 PS Claim 3; Page 74; 108pp; English.
 XX
 CC The invention relates to antisense compounds targetted to a nucleic acid
 CC molecule encoding human inhibitor-kappa B-R (also known as I-kappaB β ,
 CC IKK β , I-kappa-B-related, ikappaB β , nuclear factor of kappa light
 CC polypeptide gene enhancer in B-cells inhibitor-like 2 and NFKBIL2) to
 CC inhibit its expression. Antisense compounds of the invention are useful
 CC for treating diseases or conditions associated with the expression of
 CC inhibitor-kappa B-R such as a heightened immune response involving
 CC increased cytokine expression, or a result of infection (e.g. bacterial,
 CC viral or parasitic). They are useful for diagnostics, therapeutics,
 CC prophylaxis e.g. to prevent or delay infection, inflammation or tumour
 CC formation, as research reagents and kits and in distinguishing between
 CC functions of various members of a biological pathway. They are also
 CC useful in antisense therapy. The present sequence is an oligonucleotide
 CC targetted to human inhibitor-kappa B-R DNA

 PT disorders.
 XX
 XX Claim 3; SEQ ID NO 82; 145pp; English.
 PS
 XX
 CC The invention relates to a new antisense compound comprising 8-50
 CC nucleobases in length targeted to a nucleic acid molecule encoding a co-
 CC repressor for RE1 silencing transcription factor (CoREST), where the
 CC compound specifically hybridizes with and inhibits the expression of
 CC CoREST. The CoREST antisense oligonucleotide has any of 72 specifically
 CC claimed sequences of 20 bp, given in the specification. The methods and
 CC compositions of the present invention are useful for the diagnosis,
 CC prevention and/or treatment of diseases or conditions associated with
 CC aberrant expression or activity of CoREST, such as a developmental
 CC disorder and/or a hyperproliferative condition like neuronal cancer. The
 CC current sequence represents an antisense oligonucleotide for the
 CC inhibition of human CoREST mRNA levels. Nucleotides of the invention have
 CC 2-MOE wings and a deoxy gap.

XX

CC This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyposecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has antiallergic, antiinflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hyperinflation, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc., tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 XX
 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 XX Claim 15; SEQ ID NO 13143; 763pp; English.
 XX
 XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyosecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

 XX
 XX Pharmaceutical composition for treating asthma, has antisense
 PT oligonucleotide containing less percentage of adenosine, targeted to
 PT nucleic acids associated with lung airway or lung dysfunction, and
 PT bronchodilating agent.
 XX
 XX Claim 15; SEQ ID NO 3767; 763pp; English.
 PS
 XX This invention describes a novel composition (a) a first active agent,
 CC comprising oligonucleotides, effective for alleviating
 CC bronchoconstriction, respiratory tract inflammation, allergies and
 CC reducing adenosine sensitivity, levels of adenosine (A) or (A) receptors,
 CC surfactant depletion or hyosecretion, when administered to a mammal. The
 CC oligonucleotides are derived from a gene encoding or regulating
 CC expression of a target polypeptide associated with lung airway or lung
 CC dysfunction or cancer and can be anti-sense to the corresponding mRNA.
 CC The invention also describes a kit, that comprises: (a) a delivery
 CC device, in separate containers, (b) the oligonucleotides, (c)
 CC instructions for adding a carrier and for use of the kit. The composition
 CC of the invention has anti-allergic, anti-inflammatory, antiasthmatic,
 CC analgesic, hypotensive, immunosuppressive and cytostatic activity, is a
 CC beta-adrenergic agonist. The composition is useful for preventing or
 CC treating a respiratory, lung or malignant disease. The administered
 CC composition comprises oligo and is administered to reduce the production
 CC or availability, or to increase the degradation of the target mRNA or to
 CC reduce the amount of target polypeptide present in the lungs. The
 CC pulmonary obstruction, and/or bronchoconstriction and/or lung
 CC inflammation, allergies and/or surfactant hypoproduction are associated
 CC with a disease or condition such as pulmonary vasoconstriction,
 CC inflammation, allergies, asthma, impeded respiration, respiratory
 CC distress syndrome, pain, cystic fibrosis, allergic rhinitis, pulmonary
 CC hypertension, emphysema, chronic obstructive pulmonary disease, pulmonary
 CC transplantation rejection, pulmonary infections, bronchitis or cancer.
 CC The reduced adenosine content of the anti-sense oligos corresponding to
 CC thymidines present in the target RNA serves to prevent the breakdown of
 CC the oligonucleotides into products that free adenosine into the system
 CC e.g., lung, brain, heart, kidney, etc, tissue environment and thereby, to
 CC prevent any unwanted effects due to it

XX
XX New antisense compound, having a sequence targeted to a nucleic acid
PT encoding mPGES-1, useful for preparing a composition for treating e.g.,
PT inflammation, Alzheimer's disease, arthritis, diabetes, cancer or
PT ischemia.
XX
XX Claim 4; SEQ ID NO 1597; 132pp; English.
XX
XX The present sequence represents a chimeric antisense oligonucleotide
CC targeted to human microsomal prostaglandin E2 synthase (mPGES-1). The
CC human mPGES-1 gene is located on chromosome 9, more specifically to
CC 9q34.3. The present invention also describes: (1) antisense compounds,
CC having a sequence comprising 8-30 bp targeted to a nucleic acid encoding
CC mPGES-1, which specifically hybridise with the nucleic acid mPGES-1 and
CC inhibits its expression; (2) a method of inhibiting the expression of
CC mPGES-1 in cells or tissues; and (3) a method of treating an animal
CC having a disease or condition associated with mPGES-1. mPGES-1 chimeric
CC antisense oligonucleotides and antisense compounds have cytostatic,
CC antidiabetic, immunomodulatory, cardiant, neuroprotective,
CC antiinflammatory, neuroprotective, nootropic, antiarthritic, vasotropic,
CC ophthalmological, immunomodulatory and cardiovascular activities, and can
CC be used as mPGES-1 inhibitors and in gene therapy. The antisense compound
CC can be used for preparing a composition for treating a disease or
CC condition associated with mPGES-1 e.g., inflammation, Alzheimer's
CC disease, arthritis, diabetes, cancer, ischaemia or reperfusion injury, or
CC ophthalmic, immunological, cardiovascular or neurological disorder.

Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g. asthma.

Claim 2; SEQ ID NO 622; 174pp; English.

The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention also relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the prevention and/or treatment of a respiratory or lung disease. The oligonucleotides are useful for reducing or inhibiting expression of a gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The respiratory or lung disease is associated with hyper-responsiveness to respiratory or lung disease of, adenosine and/or levels of adenosine A receptor(s), and/or asthma and/or lung allergies associated with inflammation or an inflammatory disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD), allergic rhinitis, acute respiratory distress syndrome, pulmonary hypertension, lung inflammation, bronchitis, airway obstruction or bronchoconstriction. This sequence represents an oligonucleotide of the invention.

Novel single or multiple target oligonucleotide anti-sense to e.g. initiation codon, intron of respiratory disease-relevant gene e.g. CCR1, RANTES, MCP4, useful for prophylaxis or treating respiratory disease e.g. asthma.

Claim 2; SEQ ID NO 639; 174pp; English.

The invention relates to oligonucleotides anti-sense to an initiation codon, coding region, 5' or 3' intron-exon junction, intron or region with 2-10 nucleotides of the 5'-end or 3'-end of a nucleic acid target chosen from a gene encoding interleukin (IL)-4 receptor, interleukin (IL)-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C or PDE4 D. The invention also relates to a method of screening a candidate compound that binds to one or more nucleic acid target(s) or expressed product(s), for the prevention and/or treatment of a respiratory or lung disease. The oligonucleotides are useful for reducing or inhibiting expression of a gene or mRNA encoding interleukin-4 receptor, interleukin-5 receptor, CCR1, CCR3, Eotaxin-1, RANTES, MCP4, CD23, ICAM, VCAM, tryptase a, tryptase b, PDE4 A, PDE4 B, PDE4 C, or PDE4 D. The oligonucleotides are useful for preventing or treating a respiratory or lung disease. The respiratory or lung disease is associated with hyper-responsiveness to respiratory or lung disease of, adenosine and/or levels of adenosine A receptor(s), and/or asthma and/or lung allergies associated with inflammation or an inflammatory disease. The respiratory or lung disease is chosen from airway inflammation, allergy, asthma, impeded respiration, cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD), allergic rhinitis, acute respiratory distress syndrome, pulmonary hypertension, lung inflammation, bronchitis, airway obstruction or bronchoconstriction. This sequence represents an oligonucleotide of the invention.

CC receptor(s), and/or asthma and/or lung allergies associated with
 CC inflammation or an inflammatory disease. The respiratory or lung disease
 CC is chosen from airway inflammation, allergy, asthma, impeded respiration,
 CC cystic fibrosis (CF), chronic obstructive pulmonary disease (COPD),
 CC allergic rhinitis, acute respiratory distress syndrome, pulmonary
 CC hypertension, lung inflammation, bronchitis, airway obstruction or
 CC bronchoconstriction. This sequence represents an oligonucleotide of the
 CC invention.

XX
 CC The present invention describes using a leukotriene synthesis inhibitor
 CC (I) for the manufacture of a medicament for the treatment of myocardial
 CC infarction or susceptibility to myocardial infarction in an individual.
 CC Also described is a method (M1) for the treatment of acute coronary
 CC syndrome (ACS) in an individual comprising administering (I). (I) has
 CC antiatherosclerotic, cardiant and antiangiinal activities, and can be used
 CC as a leukotriene biosynthesis inhibitor, and a leukotriene receptor
 CC antagonist. (I) can be used for the manufacture of a medicament for the
 CC treatment of myocardial infarction or susceptibility to myocardial

CC infarction in an individual who has at least one risk factor chosen from
 CC an at-risk haplotype for myocardial infarction, an at-risk haplotype in
 CC the 5-lipoxygenase activating protein (FLAP) gene, a polymorphism in a
 CC FLAP nucleic acid and an at-risk polymorphism in the 5-lipoxygenase (5-
 CC LO) gene promoter; in an individual who has at least one risk factor
 CC chosen from diabetes, hypertension, hypercholesterolemia, elevated
 CC lip(a), obesity, past or current smoker; in an individual having elevated
 CC inflammatory marker chosen from C-reactive protein (CRP), serum amyloid
 CC A, fibrinogen, leukotriene, leukotriene metabolite, interleukin-6, tissue
 CC necrosis factor-alpha, soluble vascular cell adhesion molecule (sVCAM),
 CC soluble intervascular adhesion molecule (sICAM), E-selectin, matrix
 CC metalloproteinase type-1, matrix metalloproteinase type-2, matrix
 CC metalloproteinase type-3 and matrix metalloproteinase type-9; in an
 CC individual having increased low density lipoprotein (LDL) cholesterol
 CC and/or decreased high density lipoprotein (HDL) cholesterol; in an
 CC individual having increased leukotriene synthesis; in an individual
 CC having previous myocardial infarction or acute coronary syndrome (ACS)
 CC event, stable angina; or in an individual who has atherosclerosis or who
 CC requires treatment to restore blood flow in arteries. (M1) is useful for
 CC treating an individual suffering from acute coronary syndrome chosen from
 CC unstable angina, non-ST-elevation myocardial infarction (NSTEMI) and ST-
 CC elevation myocardial infarction (STEMI). The human FLAP gene is located
 CC on chromosome 13, more specifically to 13q12. The present sequence
 CC represents a microsatellite marker used in the exemplification of the
 CC present invention.

XX
XX Example 15; SEQ ID NO 160; 65pp; English.
XX
XX The invention describes a compound 8-80 nucleobases in length targeted to
CC a nucleic acid molecule encoding estrogen-responsive finger protein. The
CC compound specifically hybridises with the nucleic acid molecule encoding
CC estrogen-responsive finger protein (which comprises a sequence of 24295
CC bp fully defined in the specification) and inhibits the expression of
CC estrogen-responsive finger protein. Also described are: a method of
CC inhibiting the expression of estrogen-responsive finger protein in cells
CC or tissues; a method of screening for a modulator of estrogen-responsive
CC finger protein; a diagnostic method for identifying a disease state; a
CC kit or assay device comprising the above compound; and a method of
CC treating an animal having a disease or condition associated with estrogen
CC -responsive finger protein. The antisense oligonucleotide is useful for
CC inhibiting the expression of estrogen-responsive finger protein in cells
CC or tissues to prevent or treat diseases associated with aberrant
CC estrogen-responsive finger protein expression, such as
CC hyperproliferative disorders. In addition, the compound is used for
CC diagnostics, prophylaxis, or as research reagents or kits. This sequence
CC represents a human estrogen-responsive finger protein antisense
CC oligonucleotide.

PT Identifying a multifunctional oligomeric compound to modulate expression
PT of RNA comprises identifying an inhibiting antisense strand and
PT inhibiting double-stranded oligomeric compound as multifunctional
PT oligomeric compounds.
XX
PS Example 1; SEQ ID NO 77; 55pp; English.
XX
CC The invention describes a method of identifying a multifunctional
CC oligomeric compound to modulate expression of RNA. The method comprises:
CC contacting a target RNA with one or more double-stranded oligomeric
CC compounds hybridisable to one or more target regions of the RNA and
CC identifying double-stranded oligomeric compounds which inhibit target RNA
CC levels by at least 50%; contacting the target RNA with an antisense
CC strand of the modulating double-stranded oligomeric compound and
CC determining whether the antisense strand inhibits target RNA levels by at
CC least 50%; and identifying the inhibiting antisense strand and the
CC inhibiting double-stranded oligomeric compound as multifunctional
CC oligomeric compounds. Also described are: a multifunctional oligomeric
CC compound identified as above; a method for optimising target region
CC selection for modulation of RNA expression; a method of modulating RNA
CC expression; methods of optimising modulation of RNA; a method of
CC selecting a target region of a gene; a method of selecting an optimised
CC single-stranded oligomeric compound; a method of selecting an optimised
CC double-stranded oligomeric compound; a method of selecting a single-
CC stranded oligomeric compound; a method of selecting a double-stranded
CC oligomeric compound; a method of identifying one or more optimised double
CC -stranded oligomeric compounds; an oligomeric compound, 8-80 nucleobases
CC in length, targeted to a target RNA, where the oligomeric compound
CC specifically hybridises the target RNA and the oligomeric compound
CC inhibits RNA levels by at least 50% in both single-stranded and double-
CC stranded forms; and an oligomeric compound, 8-80 nucleobases in length
CC targeted to a target RNA, where the oligomeric compound has a least 80%
CC sequence homology to the complement of the target RNA and where the
CC oligomeric compound inhibits RNA levels by at least 60% in both single-
CC stranded and double-stranded forms. The method is useful for identifying
CC a multifunctional oligomeric compound to modulate expression of RNA. This
CC sequence represents an intron targeting allele specific oligonucleotide
CC that can be used to modulate RNA expression.

PT Novel FLAP (5-lipoxygenase activating protein) nucleic acid useful for
PT diagnosing myocardial infarction and for identifying agent that is useful
PT for treating myocardial infarction.
XX
PS Example; SEQ ID NO 115; 230pp; English.
XX
CC The invention comprises nucleic acid sequences of the human 5-
CC lipoxygenase activating protein (FLAP) gene - present on chromosome
CC 13q12. In particular the invention relates to polymorphisms identified
CC within this gene. The DNA sequences of the invention are useful for
CC diagnosing susceptibility to myocardial infarction and identifying agents
CC that alter expression of FLAP. The present DNA sequence represents a PCR
CC primer that is used to amplify a microsatellite marker from the human
CC FLAP gene.

 PS
 XX This invention relates to a novel activated mutant protein tyrosine
 CC kinases and associated methods for diagnosing cancer and screening for
 CC anti-cancer agents. Protein kinases are signalling molecules involved in
 CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
 CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
 CC the majority of mutations occurring in the NTRK3, FES, GUCY2P and
 CC MCCK/MLK4 genes. Most were identified in the kinase domain. The invention
 CC may be useful for the production of compounds with a cytostatic activity
 CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
 CC stimulators. The invention may be useful for developing methods for
 CC detecting mutations involved in cancer or screening for anti-cancer
 CC agents. The present sequence is that of a human-derived oligonucleotide
 CC which is related to the invention.

 PS This invention describes a novel method for quantitating genetic
 CC instability independent of microsatellite alterations by treating a
 CC comparison pair comprising genomic DNA from tumour cells and genomic DNA
 CC from normal cells. The method involves the cells from the same individual
 CC with oligonucleotide primers selected from (i) a nucleotide sequence
 CC (CG)xRG, where R is a purine selected from adenine and guanine and x = 3-
 CC 7, (ii) a nucleotide sequence (CG)xRY, where R is as in (i) and Y is a
 CC pyrimidine selected from cytosine, thymine, and uracil and x = 3-7, (iii)
 CC a nucleotide sequence (CG)xRR, where R is as in (i) and x = 3-7, (iv) a
 CC nucleotide sequence (CG)xYY, where Y is a pyrimidine selected from
 CC cytosine, thymine, and uracil and x = 3-7, (v) a nucleotide sequence
 CC (CA)xRG, where R is a purine selected from adenine and guanine and x = 6-
 CC 16, (vi) a nucleotide sequence (CA)xRY, where R is a purine selected from
 CC adenine and guanine and Y is a pyrimidine selected from cytosine,
 CC thymine, and uracil, and x = 6-16, (vii) a nucleotide sequence (CA)xRR,
 CC where R is a purine selected from adenine and guanine and x = 6-16,
 CC (viii) a nucleotide sequence (CA)xYY, where Y is a pyrimidine selected
 CC from cytosine, thymine, and uracil and x = 6-16, and (ix) a combination
 CC of the primers. The method is useful for detecting genomic instability
 CC which are commonly associated with the various stages of neoplastic
 CC transformation and carcinogenesis. The method is rapid and simple

XX PT Interference RNA agent useful for treating dyslipidemias, coronary artery
XX PT disease, diabetes, cancer or neurological disease, comprises sense
XX PT sequence and antisense sequence which has specific modifications.
XX PS Example 5; SEQ ID NO 6759; 378pp; English.
XX CC The invention describes a RNA interference (iRNA) agent (I) comprising a
XX CC sense sequence and an antisense sequence, where the sense sequences have
XX CC one or more asymmetrical 2'-O alkyl modifications, the antisense
XX CC sequences have one or more asymmetrical phosphorothioate modifications
XX CC and the antisense sequence targets a human gene sequence. Also described
XX CC are: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100
XX CC levels or glucose-6-phosphatase levels in a subject; producing (I);
XX CC stabilising (I), involves selecting a sequence with activity and
XX CC introducing one or more asymmetrical modification in the sequence, where
XX CC the modification decreases nuclease sensitivity while not decreasing its
XX CC activity; a kit comprising (I) and instruction for its use; and a device
XX CC that can be dispense or administer a composition comprising (I). (I) is
XX CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (MI)
XX CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
XX CC The subject is suffering from a disorder characterised by elevated or
XX CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
XX CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
XX CC disorder is chosen from the HDL/LDL cholesterol imbalance,
XX CC dyslipidaemias, hypercholesterolaemia, coronary artery disease (CAD), coronary heart
XX CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
XX CC inhibit hepatic glucose production or for treating glucose-metabolism-
XX CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
XX CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
XX CC lung cancer), neurological disease (e.g., Huntington disease or
XX CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
XX CC represents a hepatitis C virus (HCV) antisense oligonucleotide that can
XX CC be used to control HCV gene expression.

 PT sequence and antisense sequence which has specific modifications.
 XX
 PS Example 5; SEQ ID NO 6759; 378pp; English.
 XX
 CC The invention describes a RNA interference (iRNA) agent (I) comprising a
 CC sense sequence and an antisense sequence, where the sense sequences have
 CC one or more asymmetrical 2'-O alkyl modifications, the antisense
 CC sequences have one or more asymmetrical phosphorothioate modifications
 CC and the antisense sequence targets a human gene sequence. Also described
 CC are: a pharmaceutical preparation comprising (I); reducing (MI) apoB-100
 CC levels or glucose-6-phosphatase levels in a subject; producing (I);
 CC stabilising (I), involves selecting a sequence with activity and
 CC introducing one or more asymmetrical modification in the sequence, where
 CC the modification decreases nuclease sensitivity while not decreasing its
 CC activity; a kit comprising (I) and instruction for its use; and a device
 CC that can be dispense or administer a composition comprising (I). (I) is
 CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (MI)
 CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
 CC The subject is suffering from a disorder characterised by elevated or
 CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
 CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
 CC disorder is chosen from the HDL/LDL cholesterol imbalance,
 CC dyslipidaemias, hypercholesterolaemia, coronary artery disease (CAD), coronary heart
 CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
 CC inhibit hepatic glucose production or for treating glucose-metabolism-
 CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
 CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
 CC lung cancer), neurological disease (e.g., Huntington disease or
 CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
 CC represents a hepatitis C virus (HCV) antisense oligonucleotide that can
 CC be used to control HCV gene expression.

CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
 CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
 CC disorder is chosen from the HDL/LDL cholesterol imbalance,
 CC dyslipidaemias, hypercholesterolaemia, statin-resistant
 CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
 CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
 CC inhibit hepatic glucose production or for treating glucose-metabolism-
 CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
 CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
 CC lung cancer), neurological disease (e.g., Huntington disease or
 CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
 CC represents a hepatitis C virus (HCV) antisense oligonucleotide that can
 CC be used to control HCV gene expression.

 XX
 CC This invention relates to a novel activated mutant protein tyrosine
 CC kinases and associated methods for diagnosing cancer and screening for
 CC anti-cancer agents. Protein kinases are signalling molecules involved in
 CC tumorigenesis. Mutational analysis of the human tyrosine kinase gene
 CC family identified somatic alteration sin 1 in 5 colorectal cancers, with
 CC the majority of mutations occurring in the NTRK3, PES, GUCY2F and
 CC MCKK/MLK4 genes. Most were identified in the kinase domain. The invention
 CC may be useful for the production of compounds with a cytostatic activity
 CC acting as protein tyrosine kinase inhibitors or guanylate cyclase
 CC stimulators. The invention may be useful for developing methods for
 CC detecting mutations involved in cancer or screening for anti-cancer
 CC agents. The present sequence is that of a human-derived oligonucleotide
 CC which is related to the invention.

XX Sequencing complex genomes, present as fragments in a cosmid library - by
PT sequencing end-specific nucleotides of each clone then correlating with
PT spatial relationship of cosmid, esp. for mammalian chromosomes.
XX Example 4; Page 90; 128pp; English.
XX Sequences were determined from the ends of chromosome 11-specific cosmids
CC by automated sequencing without intermediate subcloning. A sample of 371
CC DNA sequence fragments were determined and of these, 277 were suitable
CC for STS primer prediction by computer analysis (using the "primer"
CC program available from E.Lander, Mir). The STSs and cosmids were mapped
CC by in situ hybridisation, somatic cell hybrid analysis or both. Using
CC this method, 370 STSs specific for human chromosome 11 were generated and
CC most of them were regionally mapped. This procedure illustrates a novel
CC method for sequencing complex genomes, designated "sequence sampled
CC mapping". The sequence sampled mapping method is useful for the
CC completion of high density sequence-based maps, and ultimately, for the
CC complete sequencing of genomic DNA directly from cosmid clones. See
CC AQ82001-Q82706 and AQ91325-Q91358 for STS primers. (Updated on 25-MAR-
CC 2003 to correct PN field.)

 PT Determining a predisposition for or the occurrence of neurodegenerative
 PT disease, e.g. Alzheimer's disease by detecting in a target nucleic acid
 PT the presence or absence of an allelic variant of one or more polymorphic
 PT regions.
 XX
 PS Example 3; Page 274; 848pp; English.
 XX
 CC The present invention relates to a method (M1) for determining a
 CC predisposition for or the occurrence of neurodegenerative disease in a
 CC subject. The method comprises detecting in a target nucleic acid obtained
 CC from the subject the presence or absence of an allelic variant of one or
 CC more polymorphic regions of one or more genes selected from UPA
 CC (urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
 CC degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
 CC lyase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
 CC presence of at least one of the allelic variant of one or more
 CC polymorphic regions is indicative of a predisposition for or the
 CC occurrence of neurodegenerative disease. The genes are all located on
 CC chromosome 10. M1 is useful for determining a predisposition for or the
 CC occurrence of, and for treating neurodegenerative disease, particularly
 CC Alzheimer's disease. The present sequence is a PCR primer, which was used
 CC in the method of the invention.

 CC Selecting genetic markers as targets for nucleic acid sequence
 PT amplification, useful for improving genetic testing, e.g. fetal sex
 PT determination, comprises selecting each of the genetic markers according
 PT to a heterozygosity index.

XX
 PS Claim 36; Page 39; 64pp; English.
 XX
 CC The invention describes a method of selecting genetic markers as targets
 CC for nucleic acid sequence amplification comprising selecting each of the
 CC genetic markers according to a heterozygosity index of 0.5 or greater.
 CC Selecting and amplification of genetic markers are useful as targets for
 CC nucleic acid sequence amplification, for genetic testing or facilitating
 CC multiplex PCR amplification from limiting amounts of target nucleic acid.
 CC The methods are also useful for improving genetic diagnostic and
 CC screening methods, such as prenatal diagnostic testing, foetal sex
 CC determination or genetic identification, e.g. DNA profiling or DNA
 CC fingerprinting. The nucleic acid sequence amplification is also useful in
 CC forensic analysis of degraded, old, ancient and difficult samples that
 CC are difficult to amplify and identify. This sequence represents a PCR
 CC primer used in the selection and amplification of genetic markers

 PT Determining a genotype associated with increased or decreased resistance
 PT to familial bipolar affective disorder in a family comprises determining
 PT the genotype of e.g., chromosomal regions D4S402 and D4S424.
 XX
 PS Disclosure; Page 12; 79pp; English.
 XX
 CC The present invention relates to a method of determining a genotype
 CC associated with increased or decreased resistance to familial bipolar
 CC affective disorder. The method comprises determining the genotype with at
 CC least one marker of at least one chromosomal region linked to a locus
 CC associated with resistance to bipolar affective disorder, where the

CC chromosomal regions are included of and localised between D4S402 and
CC D4S424, D4S431 and D4S404, or D11S394 and D11S29. The invention also
CC discloses a kit for determining a genotype associated with increased or
CC decreased resistance to familial bipolar affective disorder, where the
CC kit comprises markers for two or more of the chromosomal regions cited.
CC The method and kit are useful for determining a genotype associated with
CC increased or decreased resistance to familial bipolar affective disorder
CC in a family affected by bipolar affective disorder, for determining the
CC contribution of these chromosomal regions to bipolar affective disorder
CC in an affective family member, and for assessing an increased or
CC decreased risk of developing bipolar illness for a tested individual from
CC an affected family. ACA58053-ACA58292 represent primers used in the
CC present invention

XX
XX New short interfering nucleic acid, useful e.g. for treatment and
PT diagnosis of cancer, downregulates expression of an interleukin gene.
XX
XX Example 3; SEQ ID NO 126; 138pp; English.
XX
XX The invention relates to short interfering nucleic acids (siNA) which
CC downregulate expression of the human interleukin-2 gene by RNA
CC interference. The siNAs may or may not comprise ribonucleotides and may
CC be double or single stranded. They further comprise sense and antisense
CC regions, or alternatively are assembled from a sense oligonucleotide and
CC an antisense oligonucleotide. Specifically, the siNAs include short
CC interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
CC hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified,
CC can contain deoxyribonucleotides, and can be chemically synthesised,
CC expressed from a vector or enzymatically synthesised. The invention also
CC relates to kits for the in vitro or in vivo delivery of siRNA; conjugates
CC and/or complexes of siRNA; and vectors that express siNA. The siNAs are
CC used to modulate expression of the interleukin-2 gene in cells, tissue
CC explants or organisms (e.g., by ex vivo gene therapy), or in grafts and
CC transplants for the treatment of a variety of conditions. They may be
CC used for treating cancer, restenosis and polycystic kidney disease. The
CC siNAs are also useful for drug screening, diagnosis, therapeutic target
CC identification and validation, genetic engineering, pharmacogenomics,
CC studying gene function, and gene mapping (e.g., of single nucleotide
CC polymorphisms). The present sequence represents the upper strand of a
CC human interleukin-2-targeted double-stranded siNA, which is identical to
CC the interleukin-2 transcript target sequence.

 PT Determining a predisposition for or the occurrence of neurodegenerative
 PT disease, particularly Alzheimer's disease, comprises determining the
 PT presence of a polymorphism in the uPA, SNCG, IDE, KNSL1, LIPA or TNFRSF6
 PT gene.
 XX
 PS Example 3; SEQ ID NO 103; 205pp; English.

XX This invention relates to a novel method of determining a predisposition
 CC for or the occurrence of neurodegenerative disease comprising detecting
 CC in a target nucleic acid obtained from the subject the presence of an
 CC allelic variant of polymorphic regions of human genes selected from
 CC urokinase plasminogen activator (uPA), gamma-synuclein (SNCG), insulin
 CC degrading enzyme (IDE), kinesin-like protein 1 (KNSL1), lysosomal acid
 CC lipase (LIPA) and tumour necrosis factor receptor SF6 (TNFRSF6). The
 CC method is useful in determining the presence or predisposition to a
 CC neurodegenerative disease, particularly Alzheimer's disease. The present
 CC sequence is that of a PCR primer which was used for amplification of a
 CC region of the human IDE gene in the exemplification of the invention.

 PT Identifying ethnic origin of humans, e.g., Caucasian, Japanese by
 PT assaying biological sample from subject for presence of at least three
 PT short tandem repeat markers in DNA of Y-chromosome of subject.
 XX
 PS Disclosure; Page 2; 6pp; English.
 XX
 CC The invention relates to a method of identifying ethnic origin of human
 CC subject comprising assaying a biological sample from subject for presence
 CC of at least three short tandem repeat (STR) markers in DNA of Y-
 CC chromosome, which are DYS438, DYS385, and DYS390 and ethnic origin is
 CC Caucasian, Afro-Caribbean, or south Asian or STR DYS385 in DNA of Y-
 CC chromosome, where ethnic origin is Caucasian, Afro-Caribbean (African-
 CC American), Japanese or south Asian. The method is useful for identifying
 CC ethnic origin of a human subject, where the ethnic origin is chosen from
 CC Caucasian, Afro-Caribbean (African-American), Japanese or south Asian.
 CC The methods are used to assay a mixed population of human individuals to
 CC determine the ethnic origin of subjects in the mixed population, and also
 CC for identifying an individual subject's ethnic origin by comparison to a
 CC local reference population or with respect to a control population.

CC Ethnic profiling in humans can be improved by the selection of STR
 CC markers from a non-autosomal chromosome, e.g., the Y-chromosome in the
 CC case of male individuals. Y-chromosome markers can provide additional
 CC benefits over autosomal STRs e.g. assisting in complex relationship
 CC studies and providing additional and more sensitive information about
 CC individuals involved in an allegation of rape that can be used for the
 CC intelligence purposes. The STR markers provide a means for identifying
 CC the ethnic origin of an individual in which the statistical model used
 CC provides reasonably accurate results with the advantage of a simple assay
 CC being used with only three markers required. The present sequence
 CC represents a human short tandem repeat (STR) marker DYS385 PCR primer.

PT Interference RNA agent useful for treating dyslipidemias, coronary artery
 PT disease, diabetes, cancer or neurological disease, comprises sense
 PT sequence and antisense sequence which has specific modifications.

XX Example 5; SEQ ID NO 5367; 378pp; English.

XX
 CC The invention describes a RNA interference (iRNA) agent (I) comprising a
 CC sense sequence and an antisense sequence, where the sense sequences have
 CC one or more asymmetrical 2'-O alkyl modifications, the antisense
 CC sequences have one or more asymmetrical phosphorothioate modifications
 CC and the antisense sequence targets a human gene sequence. Also described
 CC are: a pharmaceutical preparation comprising (I); reducing (M1) apoB-100
 CC levels or glucose-6-phosphatase levels in a subject; producing (I);
 CC stabilising (I), involves selecting a sequence with activity and
 CC introducing one or more asymmetrical modification in the sequence, where
 CC the modification decreases nuclease sensitivity while not decreasing its
 CC activity; a kit comprising (I) and instructions for its use; and a device
 CC that can be dispense or administer a composition comprising (I). (I) is
 CC useful for reducing apoB-100 levels or glucose-6-phosphatase levels. (M1)
 CC is useful for reducing apoB-100 levels or glucose-6-phosphatase levels.
 CC The subject is suffering from a disorder characterised by elevated or
 CC otherwise unwanted expression of apoB-100, elevated or otherwise unwanted
 CC levels of cholesterol, and/or dysregulation of lipid metabolism. The
 CC disorder is chosen from the HDL/LDL cholesterol imbalance,
 CC dyslipidemias, hypercholesterolaemia, statin-resistant
 CC hypercholesterolaemia, coronary artery disease (CAD), coronary heart
 CC disease (CHD) and atherosclerosis. (I) is administered to a subject to
 CC inhibit hepatic glucose production or for treating glucose-metabolism-
 CC related disorder e.g. diabetes or type-2 diabetes. (I) is useful for
 CC treating the diseases as mentioned above, cancer (e.g. breast, colon or
 CC lung cancer), neurological disease (e.g., Huntington disease or
 CC spinocerebellar ataxia) or viral disease (e.g., AIDS). This sequence
 CC represents a human glucose-6-phosphatase antisense oligonucleotide that
 CC can be used to control glucose-6-phosphatase gene expression.

XX
 CC This invention describes a novel method for quantitating genetic
 CC instability independent of microsatellite alterations by treating a
 CC comparison pair comprising genomic DNA from tumour cells and genomic DNA
 CC from normal cells. The method involves the cells from the same individual
 CC with oligonucleotide primers selected from (i) a nucleotide sequence
 CC (CG)XRG, where R is a purine selected from adenine and guanine and x = 3-
 CC 7, (ii) a nucleotide sequence (CG)XRY, where R is as in (i) and Y is a
 CC pyrimidine selected from cytosine, thymine, and uracil and x = 3-7, (iii)
 CC a nucleotide sequence (CG)XRR, where R is as in (i) and x = 3-7, (iv) a
 CC nucleotide sequence (CG)XY, where Y is a pyrimidine selected from
 CC cytosine, thymine, and uracil and x = 3-7, (v) a nucleotide sequence
 CC (CA)XRG, where R is a purine selected from adenine and guanine and x = 6-
 CC 16, (vi) a nucleotide sequence (CA)XRY, where R is a purine selected from
 CC adenine and guanine and Y is a pyrimidine selected from cytosine
 CC thymine, and uracil, and x = 6-16, (vii) a nucleotide sequence (CA)XRR,
 CC where R is a purine selected from adenine and guanine and x = 6-16,
 CC (viii) a nucleotide sequence (CA)XY, where Y is a pyrimidine selected
 CC from cytosine, thymine, and uracil and x = 6-16, and (ix) a combination
 CC of the primers. The method is useful for detecting genomic instability
 CC which are commonly associated with the various stages of neoplastic
 CC transformation and carcinogenesis. The method is rapid and simple

XX New isolated nucleic acid involved in growth regulation in human colonic
 PT epithelial cells, termed CATX, for diagnosing and treating abnormal cell
 PT growth, and for use as a probe/primer for detecting tumors.

PS Example; Page 87; 130pp; English.

XX The invention relates to an isolated nucleic acid (I) involved in growth
 CC regulation in human colonic epithelial cells, termed CATX. (I) is useful
 CC as a probe/primer for detecting tumours, preferably colon cancer. The
 CC nucleic acid, encoded polypeptide and antibody are useful in diagnosis
 CC and treatment of abnormal cell growth (such as cervical cancer,

CC melanomas, colorectal adenocarcinomas, Wilms' tumour, leukaemias and
 CC lymphomas), in screening assays for the treatment of abnormal cell
 CC growth, for raising antibodies, and to screen for peptide analogues and
 CC antagonists. (I) is useful as a biomarker for human tumour cells, e.g.,
 CC colon cancer cells, for generating probes and primers designed for
 CC identifying and/or cloning homologues in other cell types, in antisense
 CC therapy, and in tissue profiling. (I) identifies cancer cells at an early
 CC stage of development, so that premalignant cells can be identified prior
 CC to their spreading throughout the human body. (I) allows early detection
 CC of potentially cancerous conditions, and treatment of the cancerous
 CC conditions prior to spread of the cancer cells throughout the body, or
 CC prior to development of an irreversible cancerous condition. ABK27426-
 CC ABK27469 represent human colon cancer associated coding sequences and
 CC primers of the invention

XX Determining presence or absence of desired nucleic acids that contain
 PT multiple repeats of predetermined nucleic acid target sequences in a
 PT sample, by using nucleic acid hybridization methods.

PS Claim 1; Page 27; 31pp; English.

XX The invention describes a method of determining presence or absence of a
 CC desired nucleic acid (NA) that contains multiple repeats of a
 CC predetermined NA target sequence in a NA sample. The method involves
 CC providing a treated sample that may contain the desired NA in which
 CC several predetermined repeating NA target sequences are hybridised with a
 CC NA probe, analysing for presence of hybridised NA containing the NA
 CC probe, and thereby the presence or absence of the desired NA. The method
 CC is useful for determining the presence or absence of desired nucleic
 CC acids that contain multiple repeats of a predetermined NA target
 CC sequence, in a NA sample obtained from a biological sample, where the

CC repeated sequence includes several predetermined repeated sequence that
 CC differ in length and/or sequence. The methods can be efficiently used for
 CC distinguishing human and bacterial NA. The method is highly sensitive,
 CC and enables detection and quantification of the presence of a NA without
 CC the need to undergo a NA target sequence enrichment step prior to a NA
 CC hybrid detection step. The method enables rapid and accurate detection of
 CC a desired NA that contains multiple repeats of a NA target sequence. This
 CC sequence represents a probe used to detect the human Alu repeat sequences

XX Quantitating genetic instability.

XX Claim 4; Col 27-28; 27pp; English.

XX This invention describes a novel method for quantitating genetic
 CC instability independent of microsatellite alterations by treating a
 CC comparison pair comprising genomic DNA from tumour cells and genomic DNA
 CC from normal cells. The method involves the cells from the same individual
 CC with oligonucleotide primers selected from (i) a nucleotide sequence
 CC (CG)XRG, where R is a purine selected from adenine and guanine and x = 3-
 CC 7, (ii) a nucleotide sequence (CG)XRY, where R is as in (i) and Y is a
 CC pyrimidine selected from cytosine, thymine, and uracil and x = 3-7, (iii)
 CC a nucleotide sequence (CG)XRR, where R is as in (i) and x = 3-7, (iv) a
 CC nucleotide sequence (CG)XY, where Y is a pyrimidine selected from
 CC cytosine, thymine, and uracil and x = 3-7, (v) a nucleotide sequence
 CC (CA)XRG, where R is a purine selected from adenine and guanine and x = 6-
 CC 16, (vi) a nucleotide sequence (CA)XRY, where R is a purine selected from
 CC adenine and guanine and Y is a pyrimidine selected from cytosine,
 CC thymine, and uracil, and x = 6-16, (vii) a nucleotide sequence (CA)XRR,
 CC where R is a purine selected from adenine and guanine and x = 6-16,
 CC (viii) a nucleotide sequence (CA)XY, where Y is a pyrimidine selected
 CC from cytosine, thymine, and uracil and x = 6-16, and (ix) a combination
 CC of the primers. The method is useful for detecting genomic instability
 CC which are commonly associated with the various stages of neoplastic
 CC transformation and carcinogenesis. The method is rapid and simple

PS      This invention describes a novel method for quantitating genetic
CC      instability independent of microsatellite alterations by treating a
CC      comparison pair comprising genomic DNA from tumour cells and genomic DNA
CC      from normal cells. The method involves the cells from the same individual
CC      with oligonucleotide primers selected from (i) a nucleotide sequence
CC      (CG)xRG, where R is a purine selected from adenine and guanine and x = 3-
CC      7, (ii) a nucleotide sequence (CG)xRY, where R is as in (i) and x = 3-
CC      7, (iii) a nucleotide sequence (CG)xRR, where R is as in (i) and x = 3-
CC      7, (iv) a nucleotide sequence (CG)xY, where Y is a pyrimidine selected
CC      from cytosine, thymine, and uracil and x = 3-7, (v) a nucleotide sequence
CC      (CA)xRG, where R is a purine selected from adenine and guanine and x = 6-
CC      16, (vi) a nucleotide sequence (CA)xRY, where R is a purine selected from
CC      adenine and guanine and Y is a pyrimidine selected from cytosine,
CC      thymine, and uracil, and x = 6-16, (vii) a nucleotide sequence (CA)xRR,
CC      where R is a purine selected from adenine and guanine and x = 6-16,
CC      (viii) a nucleotide sequence (CA)xY, where Y is a pyrimidine selected
CC      from cytosine, thymine, and uracil and x = 6-16, and (ix) a combination
CC      of the primers. The method is useful for detecting genomic instability
CC      which are commonly associated with the various stages of neoplastic
CC      transformation and carcinogenesis. The method is rapid and simple

XX New simple sequence repeats having 2 or more tandemly repeated nucleotide
 PT core elements isolated from ryegrass and fescue, useful for selecting of
 PT genes in grass or cereal breeding or profiling grass or cereal species
 PT varieties.

XX PS Claim 6; Page 51; 72pp; English.

XX The invention relates to a substantially purified or isolated nucleic
 CC acid (I) from ryegrass or fescue species including a simple sequence
 CC repeat (SSR), having 2 or more tandemly repeated nucleotide core elements
 CC 2-6 nucleotides in length. Also included are a nucleic acid primer
 CC suitable for amplifying an SSR, identifying (M1) an SSR by preparing a
 CC library of ryegrass or fescue genomic DNA enriched for SSRs and
 CC identifying clones in the library containing SSRs, a library of ryegrass
 CC or fescue genomic DNA enriched for SSRs prepared by the M1, selecting for

CC a gene in grass or cereal breeding by identifying an SSR that is closely
 CC associated with the gene such that the SSR and the gene are
 CC preferentially co-inherited, and selecting for the SSR in the breeding, a
 CC method for DNA profiling grass or cereal species varieties by assessing
 CC variation between SSR varieties and testing the purity of grass or cereal
 CC seed batches by assessing variation within seed batch of an SSR. The SSRs
 CC may be used in the selection of genes in grass or cereal breeding, for
 CC profiling grass or cereal species varieties, for testing the purity of
 CC grass or cereal seed batches, and for DNA profiling to establish the
 CC distinct identity, uniformity and/or stability of a cultivar. The present
 CC sequence is a ryegrass or fescue SSR

XX PT New genotyping oligonucleotide, useful for detecting the presence,
 PT absence or identity of single polynucleotide polymorphism in a nucleic
 PT acid sample.

XX PS Claim 1; Page 51; 83pp; English.

XX CC Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
 CC primer extension (SNPE) primers, and the sequences of regions flanking
 CC sites of single nucleotide polymorphisms SNPs. The present invention
 CC includes kits for determining the presence or absence of a SNP, using the
 CC oligonucleotides of the invention. The PCR primers are used to amplify a
 CC SNP flanking sequence, the SNPE primer is used as a genotyping primer.
 CC The oligonucleotides are useful for genotyping a nucleic acid sample by
 CC performing a single-nucleotide primer extension reaction. The
 CC oligonucleotides are useful for determining the presence, absence or
 CC identity of a SNP and for genotyping nucleic acid samples, for e.g. to
 CC assess by association analysis the genotype of an individual or group of
 CC individuals, having a pathological phenotypic trait suspected of being

CC caused by one or more SNPs. Phenotypic traits include diseases e.g.
 CC agammaglobulinemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
 CC dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
 CC osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
 CC traits also include symptoms of or susceptibility to multifactorial
 CC disease of which a component is or may be genetic such as autoimmune
 CC diseases, including, rheumatoid arthritis, multiple sclerosis,
 CC inflammation, cancer, nervous system diseases and infection by pathogenic
 CC microorganism. The method is also useful in forensic investigations and
 CC paternity analysis. The present sequence represents a PCR primer specific
 CC for a human SNP containing DNA sequence

XX Novel recombinant carcinoma associated nucleic acid for diagnosing or
 PT treating breast carcinoma, as probes to determine the number of copies of
 PT carcinoma associated gene in the genome, and in gene therapy.

XX PS Disclosure; Page 42; 61pp; English.

XX The invention describes a recombinant carcinoma associated (CA) nucleic
 CC acid (i). (i) is useful for: evaluating the effect of a candidate
 CC carcinoma drug, by administering the drug to a patient, removing a cell
 CC sample from the patient, and determining alterations in the expression or
 CC activation of a CA gene; diagnosing carcinoma, by determining the
 CC expression of one or more CA genes in a first tissue type of a first
 CC individual, and comparing the expression of the gene(s) from a second
 CC normal tissue type from the first individual or a second unaffected
 CC individual, where a difference in the expression indicates that the first
 CC individual has carcinoma; and diagnosing carcinoma or a propensity to
 CC carcinoma by sequencing at least one CA gene of an individual. A
 CC recombinant CA protein is useful for: screening a bioactive agent capable

CC of binding to an CA protein (CAP); screening a bioactive agent capable of
 CC modulating the activity of CAP; and determining the effect of the
 CC candidate agent on the bioactivity of CAP. The invention also discloses a
 CC method for treating carcinoma. (ii) is useful as probes to determine the
 CC number of copies of CA gene in the genome and to determine the
 CC chromosomal location of CA genes, in gene therapy, as DNA vaccines, and
 CC for generating animal models of carcinomas, particularly breast
 CC carcinomas. This animal model is useful in the screening of bioactive
 CC molecules to treat carcinoma. The recombinant CA protein is useful as
 CC markers of carcinomas, including mammary adenocarcinomas (i.e. breast
 CC cancer), to generate anti-CAP antibody, and for treating wound and
 CC inflammation. This sequence represents a carcinoma associated (CA) gene
 CC discovered using mouse mammary tumour virus (MMTV) infection of mouse
 CC models.

XX Novel recombinant nucleic acid encoding carcinoma associated protein,
 PT useful for preparing compositions for treating carcinomas.

XX PS Claim 1; Page 218; 245pp; English.

XX The invention relates to recombinant carcinoma associated (CA) nucleic
 CC acid sequences from mouse and human (ADA01482-ADA03094), and to
 CC recombinant carcinoma associated proteins (CAP) encoded by them. The
 CC invention also encompasses expression vectors and host cells comprising a
 CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
 CC binds to the protein, and a biochip comprising CA nucleic acid or
 CC fragments thereof. The sequences of the invention were identified using
 CC oncogenic retroviruses, which insert into the genome of the host organism
 CC at random. Many of these do not carry transduced host oncogenes or
 CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
 CC direct consequence of the effects of proviral integration into host
 CC protooncogenes. The CA nucleic acid sequences can be used to diagnose

CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
 CC leukaemia) or a propensity to carcinoma by determination of the sequence
 CC of a CA gene, or by determination of CA gene expression in particular
 CC tissues. CA nucleic acids, proteins and antibodies are also useful as
 CC therapeutic agents and in screening and evaluating drug candidates. The
 CC present sequence represents a specifically claimed murine CA nucleic acid
 CC sequence of the invention. Note: The sequence data for this patent is
 CC also available in electronic format from WIPO at
 CC ftp.wipo.int/pub/published_pct_sequences.
